Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Try ham radio swap meets. pre-cellular ban scanners are going for
an average of $75-$100 over original price at hamfests.

Should work fine if you listening to VHF-lo and VHF-hi freqs.

If your wanting to monitor UHF (500 Mhz and above) look into
a scanner antenna. (Although I have found that a cell phone
antenna works ok for listening to the trunked stuff on 800 Mhz)

My setup is a 18" rod for VHF/UHF and a cellphone antenna for
the 800 Mhz stuff. Two thru-hole antennas on the roof of my Ford
pickup and two scanners, one for VHF/UHF other for 800 Mhz.
Hears everything in the mobile.

>Greg

I have tried several times to download Goran's software, and I get
transfer rates in the 100-200BPS range.... and the SmartDownload times
out. I'll keep trying.

I'm having trouble with the RT Systems import. Can't get it to
recognize things like RX mode. Any clue as to the format expected?
A, AM, a, am, 1, etc. ???? I tried exporting to a CSV file to see
what it wrote, but it didn't write the RX mode at all. Just the freq.

> will it work ok or just buy a new antenna?

Well, it'll probably work OK for 10M, and maybe for VHF low,
but otherwise probably crap.

If the antenna has a 'base loaded' coil, the antenna will be
'tuned' for CB (27MHz or 11M) and will actually attenuate
signals out of band over the same length of straight wire.

If you happen to have one of those CB antennas that also
work on weather band, then there is a bypass for signals
in the VHF high band, and it would probably work in the UHF
as well.

If your antenna has no coils, or is 'top loaded', then it will probably
work ok as if it were a straight piece of wire (But that's all a
regular antenna probably would be anyway!). Center loaded
will probably give varrying degrees of performance.

Don't believe the people who really know nothing and say
it will work.

But... Yes, it probably will, but you'd 'probably' get
bettter performance from a short piece of wire.

However, TRY IT! SEE what it does. If it gives you acceptable
performance, hey, you're using something free. If not, then
consider another antenna.

Mike

11. Need Help on Alinco DJ-X1

Considering all of the responses I'd recommend just getting a scanner antenna. You can probably pickup a wideband (25-1300 MHz) scanner antenna for about $20-30 at RS.

The 27 Mhz CB antennas are good for picking up 30 Mhz cordless phones.
The 477 Mhz CB antennas would be good for picking up UHF.
Either type should give useful results.

Well, the thing is, you CAN listen to what you want. It's being CAUGHT
listening that gets you done. I mean't, "Listen to what you want. But
don't do it it full view!!!"
HF utes. Well, the same applies IIRC. But like I will repeat. Please do
listen in your own home, privatly. I got flamed because I said you can get
"done" listening to "so and so". So I'm now completely the otherway round.
IN THIS COUNTRY (UK) THE ABOVE APPLIES. PLEASE CHECK YOUR OWN LAWS.

Does anyone have the operating frequencies for the Charlotte Motor Speedway (now called Lowe's Motor Speedway) located in North Carolina? I am not looking for the drivers but for the operations including security. Also what about the new Concord Mills Mall in Concord, NC?

Bill

19. Bill Cheek Update

Newsgroup: rec.radio.scanner
Date: 1999-10-01 00:00:00 UTC
From: Air Boss <larry@grove-ent.com>
Message-ID: <37f50c19.0@news4.his.com>
Source record: 105811

An appeal to Monitoring Times readers and friends of Bill Cheek:

Bill Cheek, editor of the "Experimenters Workshop" column in Monitoring Times and author of a series of books on scanner modifications was just diagnosed with incurable lung cancer at the end of September. If treatment is not begun aggressively and rapidly, doctors give him about 3-4 months.

Bill says, "research on lung cancers is ever on-going ... My doctor said that even a year ago, my case would not have been treatable at all. Now they can offer me a 4-6 months extension." The problem is, Bill does not have medical insurance. He is self-employed at Comtronics and has two daughters in college. Furthermore, charges brought against him in a New York federal court last spring -- related to his scanner business -- are currently being heard before the Grand Jury.

Bill intends to fight the cancer, but he could use your help. Bill welcomes your prayers on behalf of him and his family. If you have knowledge or feedback on the latest cancer research and developments, Bill would appreciate hearing from you. Expressions of concern are welcome, but he'll have little energy for personal replies.

You can also help with your contributions. A trust fund has been set up by friends and family to which you may contribute toward medical expenses. Here are the details:

Contributions for Bill Cheek can be made through Union Bank of CA. Checks can be made out to either:
> Bill or Cindy Cheek
> Cynthia Cheek trustee for William D. Cheek, Sr.

Funds should be sent to:

Union Bank of California
Acct# 0771354719
8359 Mira Mesa Blvd
San Diego, CA 92126
Attn: Rhonda or Kevin Smith
(619) 230-3800

OR

Bill and Cindy Cheek
PO Box 262478
San Diego, CA 92196

Though always a controversial figure, there is no disputing the fact that Bill has devoted his life to the love of radio and technology. We at

Monitoring Times ask that you give this appeal the widest circulation among your radio friends. As fellow hobbyists, let's show our appreciation by giving generously.

The vehicular radios have logic imbedded so that the first car on scene
assumes the duties of vehicular repeater. If other units arrive on scene
their vehicular repeaters do not work because of the signaling commands
of the first unit.

Maybe Mr. Van Spamming Horn should put some of his and his magazine's
money on the line for Cheek, instead of begging in public newsgroups.

Cheek was always a "libertarian" sort of guy who suggested that people
should take care of themselves, rather than relying on others to care
for them. Maybe he should have bought himself some health insurance
instead of spending so much time publicly insulting folks on BBSs and in
UseNet.

From: "Bufort T. Justice" <bufortT@justice.com>
Message-ID: <37F5423A.44018AB9@justice.com>
Source record: 105823

ON SEPTEMBER 30, 1999, A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF 18 USC 2512 (1) (A), (SENDING THROUGH THE MAIL OR CARRYING IN INTERSTATE OR FOREIGN COMMERCE, ANY ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING OR HAVING REASON TO KNOW THAT THE DESIGN OF SUCH DEVICE RENDERS IT PRIMARILY USEFUL FOR THE PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR ELECTRONIC COMMUNICATIONS.).

THIS INDICTMENT REFLECTS THE EFFORTS OF THE UNITED STATES ATTORNEYï¿½S OFFICE, FROM THE EASTERN DISTRICT OF NEW YORK, U.S. SECRET SERVICES NEW YORK ELECTRONIC CRIMES TASK FORCE AND ITS PARTICIPATING MEMBERS, IN PARTICULAR THE NEW YORK POLICE DEPARTMENT, AND NASSAU COUNTY POLICE DEPARTMENT.

THE NEW YORK ELECTRONIC CRIMES TASK FORCE IS COMPRISED OF THE U.S. SECRET SERVICE, U.S. CUSTOMS SERVICE, FEDERAL BUREAU OF INVESTIGATIONS, NEW YORK CITY POLICE DEPARTMENT, NEW YORK STATE ATTORNEY GENERALS OFFICE, NEW YORK STATE POLICE, U.S. POSTAL SERVICE, HOUSING AND URBAN DEVELOPMENT ï¿½ OIG, DEPARTMENT OF DEFENSE-DCIS IG, THE MANHATTAN, BRONX, AND BROOKLYN DISTRICT ATTORNEYS OFFICES; COMPTROLLER OF THE CURRENCY, NEW YORK STATE BANKING DEPARTMENT, INTERNAL REVENUE SERVICE-CID; NASSAU AND SUFFOLK COUNTY POLICE DEPARTMENTS, NATIONAL CENTER OF MISSING AND EXPLOITED CHILDREN, NEW YORK STATE DEPARTMENT OF MOTOR VEHICLE, NEW YORK CITY SCHOOL CONSTRUCTION AUTHORITY, GENERAL SERVICES ADMINISTRATION-IG, DEPARTMENT OF TRANSPORTATION-IG, DEPARTMENT OF COMMERCE, DEPARTMENT OF AGRICULTURE, SECURITIES AND EXCHANGE COMMISSION, WESTCHESTER COUNTY DISTRICT ATTORNEYS OFFICE AND THE FEDERAL RESERVE BANK.

THE INVESTIGATION, WHICH LED TO THIS INDICTMENT, WAS INITIATED BY THE NEW YORK CITY POLICE DEPARTMENT AFTER LEARNING OF ADVERTISEMENTS FOR AN (MDT) MOBILE DATA TERMINAL DECODING DEVICE, AND A PAGER DECODING DEVICE ON THE WORLD WIDE WEB. THE GOVERNMENTï¿½S CASE WILL BE PROSECUTED BY THE EASTERN DISTRICT OF NEW YORK. THE LEAD INVESTIGATORS IN THIS CASE ARE FROM NEW YORK CITY POLICE DEPARTMENT, SPECIAL INVESTIGATIONS DIVISION, SPECIAL FRAUDS SQUAD.

MOBILE DATA TERMINALS ARE USED BY MAJOR LAW ENFORCEMENT AND PUBLIC SAFETY AGENCIES IN THE UNITED STATES. AMONG THOSE AGENCIES USING MOBILE DATA TERMINALS IN THE NEW YORK METROPOLITAN AREA ARE THE NEW YORK CITY POLICE AND FIRE DEPARTMENTS AND NASSAU COUNTY POLICE.

MOBILE DATA TERMINALS ARE USED TO RECEIVE AND TRANSMIT SENSITIVE MESSAGES AND INFORMATION, WHICH MAY CONTAIN LAW ENFORCEMENT INFORMATION, MEDICAL INFROMATION, MOTOR VEHICLE INFORMATION, AS WELL AS OTHER PUBLIC SFAETY INFORMATION.

THIS INDICTMENT SIGNIFIES THE NEW YORK ELECTRONIC CRIMES TASK FORCEï¿½S COMMITMENT TO INVESTIGATING THE CRIMINAL ABUSE OF TECHNOLOGY, ESPECIALLY AS IT RELATES TO THE SAFETY OF LAW ENFORCEMENT AND PUBLIC SAFETY AGENCIES THROUGHOUT THE COUNTRY.

THE SECRET SERVICE THANKS ITS PARTNERS IN LAW ENFORCEMENT, COMPUTER, AND TELECOMMUNICATIONS INDUSTRIES FOR THEIR COOPERATION, SUPPORT AND ASSISTANCE.

Hello scanner gurus!!

I have one of the older generation Radio Shack trunk-tracking handhelds and am using it with limited success to listen to the New Jersey State Police, apparently a type I/II hybrid. It works pretty well, but I think the radio isn't following the type I (odd fleet numbers?) conversations very well. I believe it may be related to selecting the proper fleet map (or programming a custom fleet map - which sounds rather daunting). Is anyone having success with a particular fleet map? For that matter, does anyone know where I can find information (FAQ, website, etc.) on this subject (sorry if it has been covered - I did look)?

As a follow-up to the above, are the "next-generation" trunk-tracking scanners better or easier to use in this regard?

Finally - if anyone knows the frequency of the Liberty State Park State Rangers, or where I can find it -- I don't think they use the State Park frequencies - you would just make my day.

Thanks In Advance for any help or information.

Josh

Piss off Glen. Cheek and Van Horn have done infinitely more good
for our hobby than you ever did, or ever will. I don't see you writing
articles and books or doing anything else for the hobby but starting
fights and acting like your pal Mackey.

Your lack of compassion for a fellow human being is sickening,
but so predictable.

34. FS: Pro-74 Radio Shack Race Scanner

Newsgroup: rec.radio.scanner
Date: 1999-10-01 00:00:00 UTC
From: mprindle.N0SP*M@email.com

Source record: 105826
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello,

I have a Radio Shack Pro-74 Race Scanner FS.

Freq. Coverage in MHz- 29 - 54, 108 - 136.975, 137 - 174, 406 - 512,
806.0000 - 823.9375, 851.0000 - 868.9375, 896.1125 - 956.0000

100 Channels
Scan's 50 Channel/Sec
Search's 100 or 300 Steps/Sec
Takes 4 AA Batteries
Has 2 Antenna's - The standard antenna and a short stub race antenna

The best part of this scanner is that you can use it at the car races and
listen in to all of the drivers and there pit crews. You just program the
freqs and the car number and then you can listen to them as the action
happens.

The unit comes with:

The scanner
2 Antenna's (The standard antenna and a short stub race antenna)
The users manual

I have pics of the scanner if you want to see them. Also if you want to
see the scanner you can look in the 1999 or 2000 Radio Shack Catalog.

I'm asking $125 obo

From: Jennie <gromit@globe-net.net>
Message-ID: <37F55B0D.98F5BA5@globe-net.net>
Source record: 105827

Mike,

The PRO-34 is cell capable as well as having potential for
many other mods as well. I presently have two in my collection.
Actually, "most" cell phones aren't digital. Only the new ones
on the market and many of them can operate in the analog mode
as well. I will continue to own analog for as long as possible.
I use a digital cell phone for work and it lacks the audio quality
of the analog ones due to audio compression being used. This is a
detail the cellular companies fail to mention. Too many people
jump on the 'newer must be better' boat only to learn later that
there's a reason that these companies are pushing digital... they
can cram more customers on the available spectrum, which
has zip to do with audio quality. ;-) Many of my coworkers
have switched back to analog after we do a side by side
comparison of digital vs analog phones.

The big deal on listening to cellular conversations is it's illegal.
Anytime someone is told they can't do something, it adds a
bit of enticement (must be something good!). Frankly, I'd much
rather listen to a good police chase anytime.

If you decide you want to modify your 34 for use with a
computer, check out this link:

http://dune.globe-net.net/~rc123/Robert/PRO34/PRO34.html

>Piss off Glen.

Piss off yourself, you putrescent pile of putrid poodle puke. You have
a hell of a lot of nerve coming into THIS newsgroup begging for money
for a guy who's made far more money than I have. There are thousands of
people who need help. This is _not_ the place to solicit it.

>Cheek and Van Horn have done infinitely more good
>for our hobby than you ever did, or ever will.

Cheek has done infinitely more harm than I have, too, so it sort of
balances out. Besides, if he's done so much good, why the hell is he
broke?

>I don't see you writing
>articles and books or doing anything else for the hobby but starting
>fights

Lying scumbag. I have NEVER started a fight in this newsgroup.

>and acting like your pal Mackey.

More lies. Mackey is not my pal.

>Your lack of compassion for a fellow human being is sickening,
>but so predictable.

Bullshit. I have a lot of compassion for my fellow human being, but I'm
not a hypocrite about it. It's no secret that I wouldn't piss on Cheek
if he were on fire and my bladder was full of high octane gasoline.

But then, I wasn't the one who came sniveling into a scanner newsgroup
with my hand out, either. If you want to raise money for Cheek, fine.
Send letters or e-mail to all those thousands of Cheek-suckers and fans
and folks he's done so much good for. You MIGHT get a couple of

dollars. In the meantime, if you send ME another unsolicited e-mail, your ISP will hear from me.

BTW, how much money have YOU given to Cheek in this matter, chump? I bet you won't answer this question honestly.

Don't count on hearing the 154.905 extender freq if you are speeding. Most officers don't leave the "extender" turned on when they are in the vehicle. When the extender is turned on, it puts out an annoying beep inside the vehicle every couple seconds to remind them that the extender is on.

IMHO, RT System's software is not as easy to use as Goran's. I use RT System's only for the import feature. Works very well. After importing I download it to Goran's software and make changes there.
RT System's software does come with the programming cable.

Call it the "Federal Corruption Commission"
The Seedy Side of the FCC
Wired News

Americans often seem to view the US Federal Communications Commission as something between a benign nuisance and an antediluvian bureaucracy. But is the FCC really a group of modern-day Don Corleones who run a protection racket complete with threats to kowtow to government demands or else? That's how one FCC commissioner views his colleagues.

Decoding Radio Shack Date Codes
Decoding the date code on your Radio Shack scanner is really quite
simple. The date code consists of a number (from 1 to 12), followed by
an "A", followed by another number (from 0-9). The first number
represents the month of manufacture, while the last number represents
the year. (The "A" acts as a separator.)

For example, the date code

7A4
means that the item was manufactured in July 1994. Pretty simple, eh?
Note that the decade can't be precisely determined - "7A4" could also
mean July 1984. This shouldn't really be a problem, though.

Depends on what freq's you want to scan. Should work ok at low freq
(25-150MHz) but not well at all at 800 MHz.

Yes, you can buy one. No, it can not be legally imported into the US.

I had a relative buy one recently in the UK, on a tour. A violation of US Customs laws.

Scooter

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See: http://www.wvsc.wvnet.edu/~fcc/index.html

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while
| supplies last! In addition, the newest version, Scannerbase XE, is
| available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

CA Assembly Bill 880, providing for, essentially, multi-cross-band "translators" for emergency services, was been signed into law by Gov. Davis on Sept 7. Here's the latest from the Calif Legislature site: http://www.leginfo.ca.gov/pub/bill/asm/ab_0851-0900/ab_880_bill_19990907_chaptered.html

I will also upload it to the "Files" secition of SCANnorCAL < http://www.onelist.com/files/KMA367/ >

BILL NUMBER: AB 880 CHAPTERED
BILL TEXT

CHAPTER 356
FILED WITH SECRETARY OF STATE SEPTEMBER 7, 1999
APPROVED BY GOVERNOR SEPTEMBER 7, 1999
PASSED THE ASSEMBLY AUGUST 23, 1999
PASSED THE SENATE AUGUST 19, 1999
AMENDED IN SENATE AUGUST 16, 1999
AMENDED IN ASSEMBLY MAY 28, 1999
AMENDED IN ASSEMBLY APRIL 20, 1999

INTRODUCED BY Assembly Member Dutra

FEBRUARY 25, 1999

An act to add Section 8588.7 to the Government Code, relating to emergency services.

LEGISLATIVE COUNSEL'S DIGEST

AB 880, Dutra. Emergency services: communications.
Under the California Emergency Services Act, the Office of Emergency Services, under its director, is required to coordinate the emergency activities of all state agencies in connection with a state of emergency.
This bill would require the office to procure mobile communication translators to enable mutual-aid emergency response agencies to communicate effectively while operating on incompatible frequencies. The office would be required to implement these provisions to the extent that funds are appropriated for that purpose.

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1. The Legislature finds and declares all of the following:
(a) The ability of emergency response agencies, particularly those

under mutual-aid agreements, to communicate during disaster situations is critical to saving lives and property.
(b) During recent disasters, such as the Loma Prieta earthquake, the Oakland-East Bay Hills Fire, and the Northridge earthquake, mutual-aid emergency response agencies experienced difficulties communicating because they operated on incompatible frequency bands.

(c) Compounding the problem is the fact that conventional communications' systems such as hard-wire telephones and cellular telephones are vulnerable to failing, particularly to the forces generated by earthquakes, placing a greater reliance on the communication capabilities of mutual-aid emergency response agencies.

(d) It is necessary for the state, in the interest of protecting the lives and property of its residents, to procure and install communication translators that will enable mutual-aid emergency response agencies that operate on incompatible frequencies to communicate.
SEC. 2. Section 8588.7 is added to the Government Code, to read:
8588.7. (a) The Office of Emergency Services shall procure mobile communication translators to enable mutual-aid emergency response agencies to communicate effectively while operating on incompatible frequencies.
(b) Translators shall be located in the San Francisco Bay area and the Los Angeles metropolitan area, made ready for use by local public safety officials by the Office of Emergency Services, and provided to the appropriate state-established mutual-aid region pursuant to Section 8600.
(c) The Office of Emergency Services shall implement this section only to the extent that funds are appropriated to the office for this purpose in the Budget Act or in other legislation.

64. How to lock up an AR8200B

Newsgroup: rec.radio.scanner
Date: 1999-10-02 00:00:00 UTC
From: Jason Vigo <jvigo@worldnet.att.net>
Message-ID: <37F6BC05.625133A3@worldnet.att.net>
Source record: 105699

There seems to be a bug in the firmware of the AR8200B involving step adjust and the blocked cellular frequencies, to wit:

* Enter 2VFO mode and enter a frequency just above the blocked cellular range, e.g. 849.0125 MHz.

* Push and release the "(F)" function key and push "2" to enter a new step size.

* Enter a new step size (e.g. 25 kHz).

* Push "PASS" and then the down arrow key to enter a step adjust value. Enter any acceptable value (or leave whatever displayed value, other than "0.00" as-is) and push "ENT."

* Rotate the main dial downward one click.

This causes my AR8200B to completely freeze until I remove the AC adapter and/or the batteries.

Bill,

Details on what a discriminator tap is and what can be done by
doing so are located at this link:

http://www.comtronics.net/scandata.txt

I offer scanner services through my website, which among other mods,
also includes tapping discriminators. My website is located at this
link:

http://dune.globe-net.net/~rc123/Robert/Services.html

I am looking for a new scanner that has a computer interface. Both of the above scanners seem to fit my needs. Other than the fact that one is portable, is there any other obvious reason I should pick one over the other?
Sorry if this seems like a stupid question, but just not sure. BTW, I have a RS PRO-2050 Trunktracker now.

Thanx in advance

Jim Arnold

72. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7t476o$n48$1@news.hawaii.edu>
Source record: 105744
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an automobile accident; the future of this newsgroup is not known. 73 Bill...

Bottom line, get the BC895 and try to get some money thrown into the
deal or get ready to dig into your own pockets. That assumes, of
course, that someone really wants an outmoded laptop computer to begin
with.

Although it should come as no great surprise that this would become controversial, especially in this newsgroup, I would hope that people have enough decency to refrain from turning Mr. Cheek's unfortunate illness into a flame war. It comes down to this, if you want to donate to Mr. Cheek then by all means do so. If you don't want to or can't afford to, then simply don't. But let's not turn a man's battle with cancer and his need or lack of need for funds into fodder for another flame fest.

I don't think you can. There is a serial interface that can be
used to clone one R2 from another, or to move the entire programming
info to or from a computer. But I don't think it allows "real time"
control of the operation of the radio.

The computer interface cable needs some electronics to change signal
levels and to change separate receive/transmit signals into a single
bidirectional connection. Circuit diagrams for building one are
available on the web.

sir, Ive owened one for 5 yrs,and ive found from day one it was junk,unfortunatly i bought it used.I wrote Icom to tell them how dissapointed with thier product.Ther main problem I feel is lack of selectivty.Any thing remotely close to the freqency desired is heard,very difficult to master control key strokes.Ive been thru several internal battery changes of coarse Icom designed the radio whoch doing this yourself is near inpossible.Further when the bootom covor for the radio was missplaced i spent 6 mo. and 7 countries to find one.If youre a glutten for punisment go for it.Try the icom r2,or if youre looking for cell capibility theres many safe places to ordear from canada,javation from Uk,is redicules with thier prices.Just my opinion good luck.Sorry for the spelling,as i have no spell check.

Just don't mention the cellular capability in your description. Anyone who would be interested enough to purchase an expensive radio like the 1000XLT knows they all came unblocked out of the factory.

Let us be realistic about this. The various states and now the federal government have sued the tobacco manufactures/growers in the amount of billions of dollars. That money was, "I thought", to go into cancer research and for medical payments for the people that acquired cancer from smoking. Smoking that they them selves knew from the one set that would damage there system and could cause there demise as the end result. I chew tobacco, it's not the tobacco industries fault, it mine, it is my choice. My wife had/has cancer, she smoked - after 4 1/2 years of treatment and three operations and gallons of kemo we are thankful to our God she is still with us. WE paid a ton of money for her treatment, we didn't ask the neighbors or our friends to donate, we didn't ask the government for funds, and WE didn't sue the tobacco industry. We are not rich people by any stretch of the imagination but we are making the best of a bad situation, on our own.

I will pray for Mr. Cheek as many have done for my wife. That's as far as it goes.

98. FS: Pentium color notebook $350.00 OBO

Newsgroup: rec.radio.scanner
Date: 1999-10-02 00:00:00 UTC
From: Kevin Gunning <brumey@ns.net>
Message-ID: <mOqJ3.4045$jf5.11108@dfw-read.news.verio.net>
Source record: 105770

All:
I have a Toshiba Satellite 410CDT color notebook computer for sale. For exact specification check out this link:

http://www.csd.toshiba.com/cgi-bin/WebObjects/Toshiba.woa/wa/showSSDetailedSpecs?productTypeId=1&productFamilyId=10&productSeriesId=191

The computer has only been used in a home environment and never mobile. First as my secondary PC then as my wife's email machine. It is in excellent condition both aesthetically and technically. In summary it is a Pentium 90 or 100, 40MB RAM and a upgraded 1.4MB hard disk. The unit has a built in CDROM drive, Active
matrix screen, 28.8 PCMCIA modem and network card. I have the original 810MB drive and RAM module, both included.

I was originally looking to trade for a certain scanners but
recent events have left me needing the cash. Therefore, I am selling the notebook and accessories for $350.00 OBO.

I would prefer a sell locally (150 miles radius of Sacramento, CA) due to the risks involved with shipping
however, I will consider all offers.

Thanks in advance, please contact me via email at this time.

Kevin

Yes and no.Because I would know the person close to me much better than Mr.Cheek of course I would be more compassionate.I would also be disgusted at the person because it was self imposed.They made their grave by doing something that was a major health risk.I was a smoker-I quit and got over my addiction after 4 years.If I develope something because of smoking I ain't going to expect the world to pay my bills because of my stupidity.Now ENOUGH of this off topic crap and back to scanning.

The "Extender" is a circuit Motorola puts into low-band radios starting in the
"G" receiver (T-Power) radios. It is a small AM receiver that sences when a
voltage pulse is sensed in the RF of BOTH the AM & the on-frequency FM
receiver, thus interpreting it as noise & blanking it out of the IF circuit
of the on-frequency FM receiver. In other words, it is a complicated &
VERY GOOD
noise blanker.

I would be willing to contribute to this fund if someone could confirm
that
this is a REAL problem NOT dreamed up by him to extort money from more
people & that donations will TRULY go to helping with the cancer issue &
NOT
to other desires.

If you're not already a member then you should join join MilCom, the e-mail listserver dedicated to military monitoring.

To join:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your location
and requesting frequency help and you should get some answers.

Maybe it will be your turn someday. I'm sure we will
be just as compassionate as you when that day comes.

At least he has written several books about scanners as
well as his monthly articles. He has done more for the
hobby by accident then you ever will on purpose.

You're a loser and should reconsider your place in life,
for as you say on your website: "I find writing about
myself to be pretty boring". Since you couldn't write
anything constructive about yourself, you stoop
to slamming someone who has a terminal disease. Nice
guy.

Don't start a flame and expect not to get a little
crispy!

>The vehicular radios have logic imbedded so that the first car on scene
>assumes the duties of vehicular repeater. If other units arrive on scene
>their vehicular repeaters do not work because of the signaling commands
>of the first unit.

A minor correction to the above: the last unit on the scene becomes the active unit. Everytime a unit is turned on, it sends out a burst tone, which any other units that are already on will hear. When they hear this, they default to a standby duty. The tone detector circuits also count the number of times they have heard this tone, and as each additional tone from a newly turned on unit is heard, the units actually go into lessor standby (priority) modes. They can remember up to three tones heard. If the last unit (active) leaves the scene, the unit that was just previously placed in standby last, will hear an officer's HT, and when it DOESN'T hear the former active unit on the air in response, it will assume the active status.

Kinda complicated, but I hope I got the essence accross.

Bottom line: CHP had addressed the possiblities of multiple units on the scene.

Does anybody out there have an Optoelectronics Xplorer? I just got one, and there is a continuous humming/buzzing noise in the audio. The noise is heard through the built-in speaker, as well as when listening with an earplug.

I intend to ask Optoelectronics about it, but also wanted to see if anybody else has discovered the same thing.

Thanks,
Greg Pratt

This is *precisely* the place to solicit it. Over the years, Bill has blessed
this newsgroup with more useful information regarding scanners than you will
learn in your entire lifetime. What have YOU ever done here that's useful to
the group? Nothing. Your contributions consist solely of mucking up this
newsgroup with off-topic garbage by playing footsie with your buddy John
Mackey.

>Cheek has done infinitely more harm than I have, too, so it sort of
>balances out. Besides, if he's done so much good, why the hell is he
>broke?

Because he was RAILROADED and made an example of by the full strength of the
United States Government. What part of this don't you understand?

>Bullshit. I have a lot of compassion for my fellow human being, but I'm
>not a hypocrite about it. It's no secret that I wouldn't piss on Cheek
>if he were on fire and my bladder was full of high octane gasoline.

The feeling is quite mutual, I'm sure.

>But then, I wasn't the one who came sniveling into a scanner newsgroup
>with my hand out, either. If you want to raise money for Cheek, fine.

The Pro-90 is a good radio. I would go as far as to say above average overall. If you're in an area that uses conventional freq's or a Motorola type I or II system, you're in business. If you're looking to track EDACS or LTR you're outta luck.

There is always newer, bigger and better so if you're really interested in the sport of scanning you'll probably never find that end all radio. Just keep a couple hundred in a cookie jar somewhere for when the next big scanner comes out. Happy scanning!

Stock out of the box, it will receive 806 - 823.9375
851 - 869.9375
896 - 999.9875

Check the ID sticker on the back cover and it will tell you what
frequencies it is designed to cover.

142. REQ: Wash DC Metro Area Freq

Newsgroup: rec.radio.scanner
Date: 1999-10-03 00:00:00 UTC
From: MF
Message-ID: <7t89bo$28s5@enews3.newsguy.com>
Source record: 105654

I'm new to scanning, and havent been able to find any URL's with the Wash DC metro area frequencies. I've got a "highway" and "police" button on my scanner, but for some reason, I'm not hearing much on the police band. Any info or pointers towards good resources is appreicated!

Thank

My old BC800XLT is on a UPS truck bound for Uniden for repair. I
hope it comes back 800 mhz alive if ya know what I mean......
>Hope all this helps.
It really does, and thank you so much for the detailed reply. With
half my police departments going digital, I really don't want to
invest further in scanners, and I would like to "branch out" into
other areas of "monitoring" to keep an old hobby alive. After so many
years of uncensored "listening", I feel like I am RAPIDLY getting
squeezed out of my hobby! Thank you.......for helping me to find a
way to hang in there. Mike

The latest license grants from the FCC for Illinois week ending 10/02/99
is now available. The information can be viewed on-line
or downloaded from http://ilgrant.home.att.net.

Note that US area of operation grants are in the zipped files.

Links have been added for experimental pages to view and download
grants for Wisconson, Indiana & Michigan. There are no plans to
add any more states at this time.

FCC Grant pages show the latest information from the FCC for new
and renewed licenses. They cover all aspects in the Land Mobile
Radio Service including public safety, business and railroads.

Comments, suggestions and questions are always welcome.

Hello Everyone,

I have the following for sale. I have revised and updated this list which was posted previously. All items are in very good condition or better. The HF package is split up and many prices are REDUCED. Serious offers are considered. Payment by US Postal Money Order, prepaid only. Prices include ground shipping by UPS, CONUS. If interested, please e-mail n3fvg@worldlynx.net

ICOM IC-706 HF/6M/2M mobile with all standard accessories, manual, boxes, etc. ..... $ 650.00

ICOM OPC-599 adapter cable to use IC-706 with other Icom automatic antenna tuners like the AT-160, like new. ..... $ 45.00

ICOM IC-03AT 220 Mhz. HT package. IC-03AT with BC-35 Desktop Charger, brand new BP-7S battery, BP-8S battery, IC-DC1 mobile adapter, Icom Speaker Mic, manuals, standard accessories and boxes. ..... $ 275.00

BEARCAT BC-3000XLT handheld scanner, 25mhz. - 1.3ghz. (less cellular but receives "cell images"), rubber ducky, ac adapter/charger, battery pack just rebuilt, instruction manual. ..... $ 200.00

RADIO SHACK PRO-62 handheld scanner, 30mhz. - 960mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used. ..... $ 125.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition. ..... $ 200.00

KENWOOD MC-60A amplified desk microphone. In box, no manual, in excellent condition, used very little. ..... $ 90.00

KENWOOD UT-28S 10M FM unit for TM-641/741/642/742 mobiles. Brand new in box, never installed or used. ..... $ 250.00

DIAMOND MX-214 duplexer, (2M/220Mhz.) with 12" leads. ..... $ 40.00

COMET CF-530 HF/VHF duplexer, with 12" leads. ..... $ 45.00

Unknown brand HF SWR/wattmeter, German mfg.?, says handles 1KW but looks more like 300 W. In Box, like new. $25.00

(4) JOBCOM UHF Handheld portables, 2ch., 2W, 1 channel installed in each, 3 on same frequency, 1 different. Very easily recrystalled with

rubber ducks and plug in battery chargers. ....$ 150.00 for set

>back to 60 in unison.

That might be dangerous if a group of cars were to suddenly drop that much speed! Faster drivers are not inherently more dangerous, despite the propaganda by the insurance industry. Most accidents are caused by inattention, not speed. The speed limit is not mandatory unless it says "Maximum Speed Limit" which appears on many highways. The "Speed Limit" you see is a variable, based on the 85th percentile. In a very short and incomplete explanation, whatever 85% of the traffic is going, then THAT is the "speed limit" because slower traffic will be impeding the flow of traffic, which is also a danger. I got a ticket once for going 75 in a 55, while the rest of the traffic was going 70. That's how it was explained to me. If I had been going 70, I would have been okay.

Are you sure the battery in the back is fresh? Try pressing the reset
button on the back of the unit, or leaving it unplugged with no
battery for ____ (minutes/hours/days).

164. Antenna Dilema!

Newsgroup: rec.radio.scanner
Date: 1999-10-03 00:00:00 UTC
From: Kevin Gunning <brumey@ns.net>
Message-ID: <diSJ3.4495$jf5.18732@dfw-read.news.verio.net>
Source record: 105676

All:

I have a question for the Scanner antenna experts out there. I am fitting a new Radio Shack discone antenna outside on a short mast. That in it's self is simple enough however, I would also like the opportunity to fit a 2M/440 HAM radio antenna on the same mast. To do this I would have to do one of the following:

1) Mount the Discone high on mast and the HAM vertical lower on mast. The compromise is that the mast will be running along the length of the driven element...

2) Mount the Discone lower on the mast passing the mast through the antenna elements and then mount the HAM antenna on top. Here the compromise is running the mast through the discone.

In option 2, would this effect the receiving characteristics of the discone? In option 1, would my transmitted signal be drastically effected by the mast being so close?

Related question, could I damage my Pro2006 scanner by having a 50W VHF/UHF transmitting antenna so close to the scanners receive antenna?

Thanks in advance,

Kevin
KD6QFO

165. Re: can radar detector's be modified

Newsgroup: rec.radio.scanner

Source record: 105677

Not legally, but there was a device sold as a kit a few years back that would do it. It was later sold as a 10 ghz ham transmitter which is legal. Just the intended use of it was inquestion. It was a single GASFET (transistor) oscillator.

Also you could get some of the automatic door openers. There is a chain of Food Lion stores that set off all most all radar detectors with their door openers.
They probably operate in a legal part of some band.

ray wrote:

166. Re: Discriminator?

Newsgroup: rec.radio.scanner
Date: 1999-10-03 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <37F7F521.4B6FC285@dialpoint.net>
Source record: 105678

The discriminator is misued in this case. Most all scanners do not use a true discriminator circuit now. It was a detector stage in FM radios using a transformer and 2 diodes. Now most use some form of an IC and another form of detection. The 'discriminator tap" is where the radio frequency is converted to audio and before any audio filtering that masks out some of the needed information such as subaudio tones and faster digital pulses. You then take this unfiltered audio and put into the sound card input of a computer or other interface circuit and use it with programs to decode the digital signals.

You can look here for some info on the digital decoding.

Can anyone point me to some freqs. for New Orleans
I'll be attending a convention there next week and would
really enjoy monitoring local radio action.

Thanks in advance

Bad, it will raise all hell with the match and performance of your
transmitter.

> 2) Mount the Discone lower on the mast passing the mast through the
antenna
> elements and then mount the HAM antenna on top. Here the compromise is
> running the mast through the discone.

As bad as a discone is it will be even worse. Why not mount the discone on
the top, try it on a few frequencies and make note of the reception. Then
move it down and compare your reception.

> In option 2, would this effect the receiving characteristics of the
discone?

yes but to what extent?????

> In option 1, would my transmitted signal be drastically effected by the
mast
> being so close?

yes!

> Related question, could I damage my Pro2006 scanner by having a 50W
VHF/UHF
> transmitting antenna so close to the scanners receive antenna?

Only if the scanner is on while you are transmitting. Really depends how
close the scanner is tuned to the transmitted frequency and such things.

Glenn

Shawn,

It does get cramped working inside of the handheld scanners
and soldering to SMT components is not for everyone, especially
if you don't have the experience or specialized equipment. If you
want to attempt this yourself, the chip is a MC-3361BD and the
pin is #9. If you would like to have this done for you, I offer this
service through my website.

IMHO the 90 is an excellent radio. The only drawbacks I would offer right away are...

1.) It only stores 50 ID per trunk system. The BC245 stores 100.

2.) It will not track EDACS and LTR trunk systems. (May not be a big deal in your particular situation.

Aside from these I say you've got yourself a great scanner.

Anyone heard if Uniden plans a new base scanner like the 895 but with
the capabilities of the 245?

208. Base Trunking Scanners

Source record: 105739

This question has probably been asked before, but has anyone heard
any rumors as to whether Uniden is going to make a base equivalent
of the BC245? I know Radio Shack is coming out with a new base
trunking scanner but unless I'm wrong it can only track one system
at a time.

I believe the difference in what they call "multi-trunking" and
"dual-trunking"
is that the "multi-trunking" can track multiple systems at one time while
"dual-trunking" can track Motorola and GE systems but not at the same time.
Radio Shack's new base scanner is billed as "dual-trunking".

I'd really like to get a new scanner that can track GE systems but I've
already got a BC235 and would like to get a base system for the radio room.
If Uniden is not coming out with a base equivalent, I might as well get
a BC245.

> Will a portable shortwave radio like th radio shack dx-398 pick up
>local police and cordless phones?

Mike, the short answer to your question, which someone else already gave, is NO. However, it's not as simple as that so let me explain.

There ARE shortwave receivers that have optional circuit boards you can add to them and which will then allow them to receive SOME of the frequencies that SOME local police/fire/EMS comms take place on. However, these are generally top-of-the-line desktop or mobile receivers costing a heck of a lot more than the portable shortwave receivers that are in the DX-398 class - something such as the NRD-535, but you're not going to want to carry an NRD-535 down the street with you, and you certainly aren't going to want to carry a 12V car battery around to power the darned thing with.

If you're lucky and your local cops are in the VHF-High band, you could go out and spend over $1000 U.S. for a receiver like that, shell out another paycheck or two for the VHF option, and listen to the local cops on that radio. But why do this when you can pick up a SCANNER for less than $200 that will do the same thing, and do a much better job of it since that's what a scanner is designed to do, whereas on a shortwave, it's pretty much an afterthought.

You CAN find the FBI and certain other federal and state agencies on shortwave, but again, the bulk of their communications takes place on VHF and UHF, which is scanner territory. Shortwave receivers are for listening to HF (most of them cover 150 KHz to 30 MHz). Above 30 MHz, which is where you'll find most public safety comms, use a scanner instead, some of today's handheld scanners rival the performance of larger base units and cost a heck of a lot less than the NRD-535 does even if you get the NRD-535 without the VHF option.

For a few bucks more, by the way, you can get something like the Alinco DJX-10T (figure around $350-$400) which is a wide-range handheld receiver that covers 100 KHz to 2000 MHz. It receives all modes (AM, SSB, CW, NBFM, WBFM) and gives you both shortwave and scanner territory in one unit. It's a great scanner right out of the box using the supplied rubber duck type of antenna. Get a 2-meter whip antenna and stick that on there, and it'll surprise you with how well it can hear shortwave as well.

Hope all this helps.

Thanks for the tip, Dave. However, in the 14 years that I have been participating in telecommunicated message networks of one sort or another, I have killfiled a grand total of exactly two people. Both of those were in the CIVLIB echo on the landline BBS message network, FidoNet. Each was a communist hypocrite with a "holier-than-thou" attitude, and I made sure that they had been exposed for what they were to everyone else in that echo prior to killfiling them.

I've been on the Usenet groups for some six years now, and have yet to killfile anyone here. I download message headers first, and go through them and delete everything EXCEPT messages whose headers make it appear that the message content might interest me, or contain a request for information pertaining to a topic about which I'm knowledgeable, or is related to a thread I've been following for a particular reason.

There are a few people - very few - in the various NGs to which I am subscribed whose spelling and grammar is so atrocious that I find it impossible to understand their posts, and I delete those posts as well. Then I download message bodies for what's left and read the messages. Thus, I am able to eliminate spam, drivel, and other unwanted garbage without using a killfile, and it often takes quite awhile before I run into the folks in a NG with low signal-to-noise ratios. :-)

If I have a killfile of sorts, it's kept in my head...but few are sufficiently sadsack to make it into that killfile.

73 and good DX'ing,
John Kasupski, KC2FNG

You are SO full of crap that your eyes are probably turning brown if they already are not!
I'd like to see you try that "lame excuse" in ANY court of law in any state in order to fight a ticket!
If this was the case then lets all go out and do 120 so we can call that the speed limit.
And as far as a safe speed you fail to realize that car design, maintenance, tires, and any modifications made is what makes a car safe for any given speed. Some cars are only designed to do about 70, while others (Corvette, Porsche, ect) are made for 100+ mph stability.

You have to keep in mind that not all areas are saturated with
scanners for sale. I live close to the Kennedy Space Center
so there's plenty to listen to. Consequently, it is a popular hobby
around here. I have been to all the pawn shops, flea markets,
and many garage sales looking for used scanners. Had very little
success. I went to a hamfest last month and did find a PRO-2004
for $250 and a PRO-2006 for $300. Neither were in 'excellent'
shape. I did buy a non-Euro version of a 2042 on Ebay for $180,
a 486 80 MHz tower (complete) for $17, and a 56K modem for
$22.00. This is much better than I could get locally. I have also
sold quite a bit there also, which pays for my purchases. As
with any auction, you have to be smart, have self control, and
set limits.

220. Re: Pro-2030 Repair Question

Newsgroup: rec.radio.scanner
Date: 1999-10-04 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <37F95CAE.EC17B89C@globe-net.net>
Source record: 105551

Radio Shack has an online listing for many of their scanners.
The PRO-2030 is listed at this link:

http://support.tandy.com/support_electronics/8457.htm

Their parts listings are always a little vague and you should
call their toll free number (1-800-843-7422) and ask for
more information to be certain this is the correct part.
It appears to be...

11161098 INCLUDES RUBBER KEYPAD

The service manual refers to this part as REF. NO. Y301 but
doesn't have a corresponding part number listed.

Make sure you aren't buying the entire PCB. Usually, the rubber
membrane wears out over a period of time and should be replaced
if cleaning the contacts doesn't solve the problem. Radio Shack
calls this part a "Keytop". One for another RS scanner ran me
about $8.00.

If you have experience soldering and have worked on electronic
equipment before, then this is a fairly straightforward job. Many
times an RF shield has to be unsoldered to gain access to the
keypad. If you would prefer to have this done for you at a
reasonable rate, contact me directly and I'll help you out. I offer
this type of service though my website:

http://dune.globe-net.net/~rc123/Robert/Services.html

> A MAC running Win95???

Sure...a Mac running VirtualPC (a PC emulator which emulates standard PC hardware in software) is actually a very stable environment for running both Win95 and Win98 if you need to. It'll also run OS/2, NT and Solaris (or, presumably, anything else you can stick on a PC to try to help it out of its misery). There are also a number of PC-on-a-card solutions for PCI slotted Macs. From my experience, VirtualPC emulates a PC approximately 1/3 to 1/2 the physical clock speed of the Mac...a 233MHz iMac will emulate a 90MHz or so Pentium PC for most purposes.

Hi All,
Does anyone know of a source that a guy could find a couple of blue rectangular LED's ???

Just to be different I want to change out the green LED's on my 245 to blue ...

I would appreciate any help that anyone can offer.
Thanks......

Actually John, as usual you are the one full of it.

> The US Surgeon General was issueing warning about smoking in the 1950's.

Wrong again T-Boy. According to the National Cancer Institute the "first Surgeon General's report" warning about smoking occured "in the early 1960s". The history of the Surgen General and a report by the American Cancer Society both stae the same thing. All found in less than 20 seconds on the WWW. Try it before opening your mouth there John-Bowl. If you need help using your browser just ask.

230. Where to send my 2006

Newsgroup: rec.radio.scanner
Date: 1999-10-04 00:00:00 UTC
From: brett370@aol.comgotspam
Message-ID: <19991003214251.24382.00000391@ng-cg1.aol.com>

I picked up a 2006 with an optoboard and what I think are other mods to the scanner but it is not working correctly. Does anyone know any places I can send it to get fixed? Also, if someone can tell me how to find out if it has been cell modified that would be great. If not, and I send it to get fixed and it is cell modified what will happen? Do they keep the scanner? Also, the opto board the guy installed, is that also illegal?

I have a Bearcat xlt800, was wondering if it is able to be modified for the 900mhz range.
Is this a desent scanner to work with or is it an out of date model that has become yesterday's technology, and ifso what would be a good scanner to replace it with.
Thank you

Hey Guys / Girls,

Does anyone know if there is a scanner that can monitor the new
"Digital Radios" that so many Police and Fire Departments now
implement. I think I remember someone mentioning this kind of product
a few months ago.

Thanks for any / all replies,

Doug
emtdoug@bigfoot.com

Sometimes this is sent over the airwaves by the local FM radio
stations. This is done with SCA. Go to
http://www.access.digex.net/~cps/sca.html and read up on SCA. You can
modify your scanner or radio with a LM565 or what I find better is a
XR2211 (http://www.exar.com/products/xr2211.html). There is another
way to do this if you have a scanner (with WFM capabilities of course)
and a short-wave radio. Take the baseband (discriminator) output from
your WFM (not the normal discriminator output of the NFM chip) and
feed this into the shortwave radio. Now you can set your scanner or
radio to a local station, turn down the volume on this radio/scanner,
then tune the SW receiver from 15kHz to 100kHz and see if you are
picking up any SCA transmissions.

Er, Kevin.....

The Radio Shack discone *IS* a 2m/440 HAM radio antenna. You can also
transmit with it on 6m, 35cm, and 23cm. The resonator and tunable whip
are for 6 meters and aren't even needed for operating on the bands
above that.

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

In today's "everyone's a victim" society, of course there is! It's not the person's fault that he chose to smoke for 40 years and developed lung cancer, why it's the fault of those terrible tobacco companies who manufactured a "defective product." This is what the ongoing multi-billion dollar legalized extortions on the tobacco companies are all about.

:element...
:
:2) Mount the Discone lower on the mast passing the mast through the antenna
:elements and then mount the HAM antenna on top. Here the compromise is
:running the mast through the discone.

Some discones can be used for transmitting on some frequencies. You could
put the ham antenna in place of the vertical element of the discone.

:In option 2, would this effect the receiving characteristics of the discone?

No.

:In option 1, would my transmitted signal be drastically effected by the mast
:being so close?

No.

:Related question, could I damage my Pro2006 scanner by having a 50W VHF/UHF
:transmitting antenna so close to the scanners receive antenna?

Probably not, although you may not be able to receive much on the
scanner while you transmit. Could you use a seperate mast to be sure?

My mobile can be used in crossband repeat mode and it can output 70 watts.

:Thanks in advance,

I was a smoker for 15 years and I can speak from experience about the
difficulty of quitting. It's a lot harder than you seem to think. As for the
"exhortions," are completely ill informed on this subject so there is no
point in discussing it with you.

Without trying to start a flame war, you have the classical mistake
of assuming today is all that matters.

I've said it before, and I will say it again, and I'll probably say it
many many times in the future:

"How you get somewhere is sometimes more important
than where you are"

It applies to almost anything that is not a single snapshot
event. I usually use that to preface discussions on why
certain computers are so screwed up, but it applies here.

Years ago, the dangers of cigarettes were not widely known.
No, I'm not talking about the big tobacco companies hiding
the fact that cigarettes were harmful. I'm talking serious
medical standards.

I even picked up a 'health' book for school kids from years ago
that RECOMMENDED smoking! The rationalle was that
smoking kills germs and prevented the spread of colds!
(Sort of like seeing a worm die in a glass of alcohol and then
thinking just drink enough and you'll never get worms I guess.)

Personally I think big tobacco is corrupt. And nail the bastards
to the wall for things that are correct. ESPECIALLY hiding
evidence and specific targeting of kids, but both the pro-rights
groups and the anti-smoking people need to be careful about
where the blame is laid.

It's not a simple issue.

However, I DO believe that in what you were bitching about you
do have a point. Too many people have the 'lotto mentatilty',
allways looking for that one big win, and they don't give a crap
about morals, or ethics, or justice. It's all justified if they can
blame somebody else for something.

I guess it's sorta like praying to win the lottery. Have God cheat for
you, because you promise to give a lot back to the church? Then
these same people get upset that their prayers weren't answered.
Sure they were, the FREAKING ANSWER WAS NO!!!!

Mike

For those of you posting the addresses to scanning websites may I make one suggestion? Please indicate in the subject which geographical area the frequencies cover. Also as in the case of the link below you might indicate that the page is not in english.

While we all appreciate the links, it is worthwhile to know if a page is for scanning in a particular area. This saves the time of looking up a page for an area we have no interest in.

And a final word for all of you "who died and left you God" types. It's just a suggestion and I welcome other constructive opinions.

Hello Group. I have always been a fan of shortwave and was thinking of adding a scanner to my collection. Today when visiting my local Radio Shack they had the Pro-2048 on sale for 1/2 price ($114.99) This seemed reasonably good to me, but I know little about scanners. I check a review page (Strong Signals I think) and it seemed to have good reviews. Anyone have any experience with this unit? Is this a good thing to buy at this price? Thanks for any help.

Oh, Can I use my same long-wire Shortwave antenna, or would I have to use something different to get good reception?

I'm sure Barry understood. He's the person who also deliberately
"misunderstands" people who write "meter" when referring to a
unit of length (instead of his preferred "metre") in order to post
"funny" comments.

I recommend adding him to your killfile. He actually does post
useful information from time to time, but the ratio of useful signal
to useless spelling and grammar "jokes" is rather low.

Bufort T. Justice wrote in message <37F5423A.44018AB9@justice.com>...
>ON SEPTEMBER 30, 1999, A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF
>NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF 18 USC 2512 (1) (A),
>(SENDING THROUGH THE MAIL OR CARRYING IN INTERSTATE OR FOREIGN COMMERCE,
>ANY ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING OR HAVING REASON TO
>KNOW THAT THE DESIGN OF SUCH DEVICE RENDERS IT PRIMARILY USEFUL FOR THE
>PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR ELECTRONIC
>COMMUNICATIONS.).

I have said from day one and still contend that this is selective enforcement. A gun can be considered "primarily useful" for shooting people, that doesn't mean the CEO of Smith and Wesson goes up for accessory to murder everytime his product is used illegally.

Who is Cheeks attorney? What kind of incompetent dipstick would even allow this to go this far?! The government is making this sound like Bill sold a complete MDT monitoring kit. If so, then where was the software? The computer? The scanner? The cables? To be a complete kit, they ALL MUST have been present, or else it isn't a complete kit. That's flaw #1 in Uncle Sam's case.

A data slicer's "primary purpose" is not the "SURREPTITIOUS INTERCEPTION" of MDT traffic. It's primary purpose is to take sound input in and determine if it is a binary one or a zero. What happens after that is in the hands of the customer, NOT the manufacturer or dealer. Flaw #2.

The third flaw in their case is so big a convoy of every Mack truck ever made could travel thru it in one line, SIDE BY SIDE! Read the indictment again:

"KNOWING OR HAVING REASON TO KNOW THAT THE DESIGN OF SUCH DEVICE RENDERS IT PRIMARILY USEFUL FOR THE PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR ELECTRONIC COMMUNICATIONS."

ORAL COMMUNICATIONS?! Would anyone like to tell me when we allowed our government to outlaw EARS?! After all aren't they "PRIMARILY USEFUL FOR THE PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF ORAL COMMUNICATIONS"? You can hide behind a curtain or under the table all you want, but to surreptitiously intercept an oral conversation, EARS are required. I guess you can't indict God huh? Too bad...

If this is truly a crime than I want to see every manufacturer of hearing aids also named on this same indictment. Under the letter of the law, they ought to know that someone could purchase a hearing aid and listen to a whisper from across the room. Isn't that surreptitious monitoring?

And why stop there? Aren't AM/FM radios primarily useful for "surreptitious monitoring of electronic signals?" I have an old TV that can pick up cellular traffic. I guess I oughta turn in RCA huh? Scanners, pagers, cordless and cellular telephones, they ALL could be prosecuted under this wording. It's WAY too broad based.

The whole damn thing should have been thrown out long ago. This is an outrage. Now we're expected to throw away HOW MANY TAX DOLLARS FOR THIS KANGAROO PROCEEDING?

No. No damned way.

Personal feelings for Bill aside. The time is now to be heard. The problem with us scanner users is that we are way too passive about this sort of thing. Provide something useful, and the scanning world stands with you. Get singled out under a BS charge from the government and you stand alone. That is wrong.

Gunowners have the NRA to lobby for them. I propose we begin our own national association of scanner users. I guarantee that if even 25% of the people who own and use scanners showed up on the steps of that courthouse in peaceful protest it would make national, maybe even international news. Think about that. There is strength in numbers, and the media takes notice of groups more than they do individuals. If we really care about our hobby, then we need to form a unified group to fight for it, while we still have the right to do so.

We can't wait until a travesty like the latest house bill passes the senate. We can't wait until the FCC further restricts the use of our receivers. We can't wait until a criminal background check is required to purchase a scanner. We can't wait until scanners are made illegal altogether, and the government starts going house to house looking for them. The time is NOW.

I'm open to any input on forming such an organization.

-Phil

This will be the next step. Already, an increasing number of American cities
are filing suit against gun manufacturers, asking that they be held responsible
for the actions of criminals. Wherever there's the smell of money, there will
be lawyers. Is it too much of a stretch to assume that before too long, the
CEOs will also be named in the lawsuits?

Before this happens, look for the "victims" of cellular phone calls that have been intercepted to file suit against the scanner manufacturers. The individual who did the monitoring won't have deep pockets, of course, so they'll go after Uniden, Radio Shack, AOR, etc., instead. The brain-dead, know-nothing-about-technology, bleeding hearts who sit in the jury box will feel for these "victims" who have suffered "emotional distress" at the hands of these "greedy, insensitive big companies" and will most certainly find for the plaintiffs.

A few multi-million dollar judgements against the manufacturers will bankrupt the industry. Then, our government won't have to worry about further regulating scanners.

I don't "think", I know. I smoked for 7 years. Quit cold-turkey in October,
1989. Haven't touched it since.

Those who want to quit can and do. The rest just blame the tobacco companies
and try to extort money from them.

But the tobacco companies aren't the ones who "pay." They simply pass the
costs on to their customers. Witness the landmark, multi-billion dollar
national settlement which took place recently. The tobacco companies simply
raised the cost of cigarettes by 45 cents per pack to pay the lawyers and what
amounts to a back-door tax paid to the government "to treat sick smokers."

The lawyers got rich, state coffers overflowed, and the tobacco execs continue
to enjoy life in their ivory towers. As usual, the people who got screwed were
those who can least afford it. The taxpayers/working people.

I have a bearcat 220 that stops at about 950 Mhz. Where can I buy or preferably build a convertor attachment that allows me to scan up to say about 2000 Mhz?

Thanks

I have trouble with my pro 2006 scanner.

The scanner seems to work fine, but when i try to scan, the display frezes...

It all startet when i ran out of backup-battery power... I have tried to restart the scanner, without luck.

Any suggestions ??

The 895XLT does the CTCSS, not the 245. Uniden is supposed to be coming out with a model similar to the PRO-92, which tracks trunk/convent. simultaneously, CTCSS, Alpha-numeric channel ID, EDACS, LTR, and makes coffee!

Source record: 105448

OK, here is the scoop. I am not new to scanning, but I do not know ANYTHING about computer aided scanning. I have been in the hobby on and
off since I was10 years old.......21 long years ago. The question I have is, what is the best computer receiver to get started with. I do not need a whole bunch of bells and whistles. I mainly scan the non-trunked public service bands. I also have an extra computer set aside that I might even be able to use for this. It is a 486 DX-2 66Mhz. Don't most of these things run from DOS? I am really curious about this aspect of the hobby. Also, any web sites of interest would be greatly appreciated. I have searched for some, but I haven't been pleased with the outcome. Feel free to email me, I will also check this
post later. Thanks for your time.

Radio Netherlands has a good database on radios, searchable
by manufacturer, price range, and tabletop/portable models.
The reviews (mostly by Jonathan Marks and his team) are
thorough and straightforward.

Get on the MT Express

Grove Enterprises, the publisher of Monitoring Times magazine is pleased to announce a new product -- MT Express.

You can now receive your subscription to Monitoring Times magazine in electronic form. No more delays due to mailing, no lost or torn copies.

For less than the cost of a subscription in the United States, you can be reading the entire Monitoring Times magazine anywhere in the world before U.S. subscribers receive their printed copies! MT Express is the exact same magazine that has gained a worldwide reputation for reliable radio information that's easy to understand, and products and projects of proven value.

For a mere $19.95 per year (U.S.) MT Express gives you Monitoring Times magazine

- in PDF format viewable with free software
- delivered by FTP (10MB file)
- viewable in brillant color on your computer screen
- easily navigated by clicking on the Table of Contents
- printable using your computer printer
- searchable to find every mention of a topic or station schedule
- importable into your frequency databases
- compatiable with software to convert test to audio for sight impaired listeners

To find out if this new subscription is the delivery solution for you, you may download the August issue for free. Just go to http://www.grove-ent.com to find out how.

One year subscription to MT Express is only $19.95 (U.S.), or for even greater savings, $11 in addition to your printed subscription of $23.95 in the U.S.

To order MT Express call toll-free (800) 438-8155 or e-mail: order@grove-ent.com

In addition, Grove Enterprises new Fall-Winter products catalog is also available on our website, free of charge, in PDF format for immediate download.

I'm from Missouri, John. SHOW ME. Show me the law that says I cannot monitor an unencrypted public safety radio system.

You're dead wrong. There is no such law against monitoring MDT's, trunked data streams and the like. The only law there is against monitoring data of any kind is in regards to pagers. For now.

Give it some time and there WILL be such laws for our government to hide behind.

>"incompetant dipstick".

I thought I heard that he said that she said, or so I'm told.... jeez John.
At a time like this can you set aside your personal feelings towards Bill
and let those of us who KNOW the situation talk about it like adults? Bill
can't afford a pricy communications lawyer, and he's not stupid, so he's not
representing himself. He's stuck with a Public Defender. That's the reason
why this case isn't being more aggressively fought.

315. Motorola Talkgroup 0?

Newsgroup: rec.radio.scanner
Date: 1999-10-05 00:00:00 UTC
From: Mike Mathyk-Pinto <mmathykp@ucalgary.ca>
Message-ID: <7tdo1k$c1a@ds2.acs.ucalgary.ca>
Source record: 105472

I've been logging talkgoup 0000 on trunker in the daytime while I'm at work. I keep taking it out of the system's .grp file, but it keeps showing back up.

Is 0000 a valid talkgroup for Motorola Type 1 systems? You can't enter 0 into the 235's memory - 0 just clears whatever memory you had. I have tried 1, talkgroup 0 with an all call status bit, but I have not logged anything.

Boy, have you got it wrong! Why would I try to obtain a program published by
Datafiles at Opticom, a scanner, made by Optoelectronics?

Try datafiles@aol.com for Probe.

Truer words were never spoken. Toliet Boy has proven that he is a liar and will take every microgram of pleasure in whatever misfortune befalls Bill Cheek.

> When are YOU going to get cancer?

Toilet Boy *is* a cancer. Fortunately for the rest of the human race, he is incapable of reproducing due lack of females of the species. Even if there were females of his species, it wouldn't do him any good because he doesn't have the intellect or equipment (genetically deficient) to figure out how; kind of like a Ken doll. So take heart, Macaroon, eventually his species will die off.

> I'll go to your funeral and laugh at you!!

Save me a place. But where will the Environmental Protection Agency choose to bury what's left of him? I understand they are very touchy about toxic waste disposal.

For the love of soup......

Barry, I swear you would complain about not having anything to complain about.

For those of us who live in the US, the format of 10/2/99 IS valid. I can't help it if you Aussies read that as February 2, 1999 any more so than I can prevent you from driving down the left hand side of the road!

Besides would anyone in Australia really give a damn about what FCC licenses are granted in the state of Illinois? Probably not, huh?

Go throw another shrimp on the barbie and leave us Americans to our backwards dates, OK? No one is going to change to Federation Stardates or any other date system just for you... sorry to disappoint.

I think some of the musak stations are carried by regular FM
broadcasters as a sub carrier. You need a special reciever or an
adapter from Ramsey to receive these signals.

I think that you should consider that Cheek isn't guilty until proven to be so. That's the job of the courts to decide - not your or I. I don't see why you're foaming at the mouth about this. There could be, and probably was, more to the entire episode of the sale of this data decoder than has been made public. I personally don't see a problem with someone selling a gadget that *could* be used for some illegal purpose. However, if they are *specifically* selling it for the illegal purpose then yes, it is illegal. And that, from my armchair, is the issue here.

If it's any concellation, in Canada it is illegal to own a satellite dish that is capable of receiving American programming. Not too surprisingly, they passed a law and nobody noticed (or cared).

It will be interesting what happens with the Cheek case. I'm sure the plot will twist and turn a little before it reaches the climax. I wish Cheek good luck.

Cheers!
Andy

336. ICOM R10 help!

Newsgroup: rec.radio.scanner
Date: 1999-10-05 00:00:00 UTC
From: Tony Rizzo <*nospam*arizzo@ameritech.net>
Message-ID: <37FAC230.2A7B9295@ameritech.net>
Source record: 105493

I recently purchased an R10. After I received it I began trying to familiarize myself with the radio by listening to many of the frequencies I monitor with my other receivers. I mainly scan aero-band freqs so I punched in the frequency for the automated air traffic advisory coming out of Meigs Field here in Chicago. I set the proper band on the R10, tuned in and found it incredibly hard to pick up the signal. No matter what I did the broadcast was barely audible and drowned out by noise. Just to be sure I pulled out my Uniden xl235 and tried that- the signal came thru crystal clear.

I have tried everything form switching antennas to using no antenna. I have used the attenuator and noise blanker features of the unit to no avail. I must admit that many of the features of this radio are beyond me at this time but It seems that the performance of this radio in the aero band and others is pathetic.

I am doing something wrong?

Is it possible I got a bad unit?

Any help or advice would be greatly appreciated.

Thank you

Tony

I think they must be pulling your leg, or at least trying to intimidate you. Just look in the phone book yellow pages. You will find dozens of references to "shack". BBQ Shack, "Lobster Shack" etc. If I "shack up" with a girl, will that confuse someone into thinking my pad is a radio shack store?

Date: 10/5/99 3:43:33 PM Mountain Daylight Time
From: CANGLE1@Tandy.com (Christi Angle)
To: scanshack@aol.com ('scanshack@aol.com')

NOTICE: Throughout this message, the term "you" is to be construed as Tandy, the company, and does not, in any way, refer to any individual or employed or otherwise retained.

What an ego trip this must be, or has Tandy decided to defend all of us from someone who might post ways to modify one of the scanners that other companies manufacture for you. Just what we need, Mother Radio Shack to protect us.

I would assume that you have an "anti-shack-up" policy in your company to make sure there is no premarital hanky-panky in your vast empire, oh, but that would be illegal and unethical, wouldn't it?

There is a Chicken Shack Restaurant, are you going to use the same strong-arm tactics on them too???

How about my brother is a ham and has a Ham Shack... Would you like to close that too???

This reminds me of the man who was in charge of the Los Angeles Olympics... He threatened the Special Olympics to make them stop using the word Olympics. Also, there was a bus line in the midwest that had been named Olympic Bus Lines since before the Olympics Committee "person" was born, he managed to bulldoze them into changing their name too!

The whole basis for his insane diatribe was the loony idea that these "thieves" just might make money from using their sacred mantra... It seemed kind of a stretch to believe that handicapped persons or a small bus line in the mid west would make a fortune because folks would believe that they were actually part of the Olympics... What a joke!

"This morning's event, transit bus long jump." :>))

By the way, cooler, logical heads prevailed and all is as it was before this other big fish in a small pond decided to strut his stuff

I wish you the same success... :>))

By The Way... don't forget the following evil minions who would dare use the word "Shack" in their web pages...

www.musicfanclubs.org/spiceshack/
www.plateshack.com/

Is this not akin to Post trying to copyright the word Cereal?

I wager a judge would laugh this farce out of court, trying to say the word shack is copyright or radio for that matter! The words "Radio Shack," used together is indeed a copyright name, but to copyright each individual word? What a laugh...

Next thing you know, these fat cats will try to copyright the Bible so we can't use any word that appears therein... :>))

Everyone of our posts needs to be cc'd to: CANGLE1@Tandy.com to do any good...

I did my part... :>))

"I want to get back to my little grass (Copyright) in (whatever) Hawaii."

"That's not the reason why I want to get back, to my Sugar (Copyright)."

Nope! I think it is just that it is operating and train line pressure. The absence (or sudden decrease) of same triggers some kind of alarm I think. I'll defer to those with more expertise to provide a definitive answer, but even such simple items as consist, Loads, MTY's, Tons etc. aren't in the data, I am certain - nor is there a need for them to be.

You John Bowl are the only worthless thing. I really don't care if you believe me or not but I can't pass up the chance to prove you wrong again and again and again. You friggin moron.

Go to the CDC's sight, you know what the the CDC is don't you Bedpan Changer-Boy? They have studied you many times and have a large file on you. The Center for Disease Control and Prevention John-Bowl. Bet they know you well!

http://www.cdc.gov/nccdphp/osh/30yrsgen.htm

There you will find that it stating;

"More than 30 years ago, on January 11, 1964, Luther L. Terry, M.D., Surgeon General of the U.S. Public Health Service, released the report of the Surgeon General's Advisory Committee on Smoking and Health. That landmark document, now referred to as the first Surgeon General's Report on Smoking and Health, was America's first widely publicized official recognition that cigarette smoking is a cause of cancer and other serious diseases."

Wrong again John but you used to it now.

> (Sorta like your statements that I caused problems on a Sea-Tac area repeater
> when the repeater owner says you are wrong!!!!)

The operator owner never said such a thing and you know it. He said he didn't hear it. Only proves Marcinko (sp?) doesn't hear EVERY conversation on all the repeaters he owns. Do you now how many he owns and or operates John-Bowl? How could he hear everything on each one of them 24/7? Guilty again John-Bowl, your word games won't save you. They haven't saved you in the last 5 years and they aren't going to now.

BTW, It is a real stretch of the imagination that you would raise hell on a repeater isn't it John? BAWAHAHAHAHA! Your actions on the NG speak differently.

In the future my replies on this will be posted only on alt.fan.john.mackey.
Interesting reading over there folks and the best place to reply to
Toilet-Boy. I just couldn't help it this time.

The fundamental & important difference in your comparasions is that
old what's-his-name (I can't even think of his name right now) advertised
his data-slicer for the purposes of decoding law enforcement data
communications (which is ILLEGAL!). Using a gun to murder is
also illegal, but Smith & Wesson don't advertise thier merchandise
for that purpose. He DID advertise the data-slicer for purposes
which was/is illegal.

Also remember that those scanners are no longer produced and are the
last of the models that can receive cellular. Once they're gone from
Radio Shack's shelves, that's it! Other scanners can be "tricked"
into getting cellular, mostly by receiving images. I have compared
the signals received on my PRO-2006 vs. the images on my PRO-51, but I
did not listen to the conversations. I was doing so purely to check
the frequencies (10.7 MHz, 45 MHz or whatever) and for signal strength
and quality. Then I quickly tuned away.

>Years ago, the dangers of cigarettes were not widely known.

How many years ago are you talking about? I'm 42 and I can remember the warnings all my life. There was a John Wayne movie where he played a character told by his doctor that he was going to die from smoking. You're inhaling smoke, for Pete's sake. That's the leading cause of death in house fires. Anyone with a lick of sense knows smoking *can* be dangerous. That's why you hack and choke and gag learning to do it! However, the majority of smokers don't die of lung cancer. I don't smoke, but I'm getting pretty militant about all the anti-smoking Nazis trying to force their opinions on everyone.

... and the Atlanta agent for Muzak uses, among other means, a Multiple Address System license. These can be found at 928-929 and 952-960 MHz.

Muzak itself distributes a range of services via satelite to their licensees, who offer them via everything from on-site tape to direct satelite feed.

Anyone have mods for the bc8500xlt? I remember something a while ago about
modifying the squelch. The audio on my 8500 has a loud squelchy pop when
the transmission cuts off. It is quite annoying. How close is the 8500 to
the 9000? Are there any mods for the 9000 that I could try on the 8500 to
see if they work? Thanks....

In Windows, not in DOS (DOS will not multitask). yes it`s possible to run two copies of Probe 5 in Windows, but just forget doing anything else with that machine.....

> - can they be setup on the same sieral port? IE patching the radios
together?

This a better solution, since you can daisy-chain them together through the CI-V jacks, and assign each a different address. However, Probe will not handle this arrangement, and you will have to opt for some more sophisticated software to control the two radios, like Scanstar from Signal Intelligence

> - can they reaction tune eath other? or one?

No.

Will someone please post a "who his John Mackey FAQ?" Please do not forget to omit that was kicked off FidoNet by Bill Cheek for the sorry-ass behavior that he exhibits here every single day; don't forget that he has never posted a single post on-topic, no matter what he alleges; don't forget to mention that he is completely ignorant about scanners and knows little more about radios; mention too that he is so incompetent that he blows up repeaters; you get the idea. There's also that thing about selling licenses, and sleeping in the nude with the foster children under his care, but we won't
mention that now, will we?

Simple, rename your site the "Scan Hacks", they are as silly as Domino
Sugar(TM) going after Dominao Piza ten years ago. And guese who won
that one? It is really nice that they are so defensive of their name.
I guese us hams had better stop calling our communication center the
"ham shack" or Tandy (TM) will come down on us.
Like they always say "you've got questions and we have not got a clue".
I am sorry to see you site go dark because of the strong armed tactics
of a business bully. While I know that the scanning community is
unimportant to Tandy, it still sucks. As history shows, bullies always
get theirs in the end. Someday, some upstart business will eat them and
that day can not be too far, after all how can any company survive with
such pathetic employees and products.

387. PRO-30 Instructions

As to Tandy and their heavy handed tactics.

Just look at what happened to the "Tandy Computer Centers". Back in the mid eighties they were trying to corner the business computer market.

It didn't happen then and all they will get from this latest move is less business.

Regards,

Ed

What a great idea. Sell computers half as advanced as what is available
elsewhere for twice the price.

"Incredible Universe" wasn't exactly a stellar success, either.

The way I heard it.... (I had no official interaction or knowledge on this, just the rumor mills)

Actually, they do. There used to be a place called the "HAM Shack" that was forced to change it's name to "Ham Station" a number of years ago. They made a real pissy announcement about it at the time too.

Tandy actually ignored the reference to "Shack" when used by others until one enterprising individual started something called "Shak Electronics" or something similar. That got Tandy moving, and legally they had to enforce all or nothing. (Sounds like McDougals burgers from the movie Coming to America!)

Don't blame Tandy on this one, it's the legal system. All or nothing. And an individual that wanted to push the envelope.

Mike

Go to www.radioshack.com , I think it's under the support section. You can get ASCII versions of the manuals.

There used to be an auto parts chain named "Auto Shack" which was forced, I am
told, to change to their present name "Auto Zone."

Just a suggestion: If you're going to make a FAQ, then don't
sugar-coat it and don't leave things out, especially important things
that might help people understand the whole flame war situation that
continues to this day. This "FAQ" raises as many questions as it
answers.

398. IC-Q7A, reception, & Antennae

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: Dan Fletcher <danf1@nospam.net>
Message-ID: <37FB6D76.329EE047@nospam.net>
Source record: 105361

All,

I have an Icom Q7A with which I'm becoming less and less enchanted. Most recently, I was boat watching and scanning only a handful of the VHF marine frequencies. Other people around me had different scanners (Radio Shack, Unicom) and actual VHF marine hand held radios. In both cases, I noticed that their systems were much more sensitive to distant transmissions than my Icom was (even with fresh batteries), and their radios were receiving transmissions that I totally missed. I was told that the Q7A has good sensitivity, so I'm wondering why I'm having terrible reception? Is there a different antenna that I can use or should I get a different scanner?

I doubt RS would do very well in court on this one. The name Radio Shack as a name is at best a very weak trademark. A specific logo might be a strong one. Trademarks have well defined requirements, and this one is clearly descriptive, and involves the use of two words in everyday use. Both causes it to fail the legal requirements for a trademark. A specific logo built around those words probably can be trademark protected, but the words themselves cannot be.

Unless Scan Shack has a logo that mimics the Radio Shack Logo, the action probably would not even make it to trial. You cannot infringe upon a trademark that isn't.

RS banks on the fact that the people they attack are unlikely to be familiar with intellectual property law. This is a case where an hour with a good copyright/trademark attorney would be money well spent, and I'd almost bet money that a reply from such an attorney would result in RS walking away quietly.

>materials, rocket fuels, etc, that might pose a serious hazard in the case
>of a derailment?

NOTE: this is all from memory, so YMMV

There are 2 variants of Freds, one way and 2 way.

The data consists mainly of line pressure for the brakes.
On 2 way FREDs the engineer can control the braking of
the rear of the train by sending commands. Obviously, the
format of this data is proprietary, since some bozo would
probably go out and start big-holing trains (emergency stop),
which is a hazardous manuever for all involved.

If you are scanning near a railyard, you can hear train crews
doing FRED tests as part of their air test.

I'm sure I've messed something up, so feel free to correct.

I don't believe the indictment ever happened. I just got an email from Bill wherein he says that the criminal charges are "in a holding pattern". I think the "press release" was manufactured by a troll. I will continue to think that until Bill tells me something different, or I actually see the press release used by a media outlet other than rec.radio.scanner.

Easy to say, hard to do. In most parts of the US (and probably Canada), there are no competing electronics chains that carry some of the products that Radio Shack carries. Coincidentally (maybe), they've just announced a new scanner model that does something no other scanner can do - track EFJ/Transcrypt LTR trunking.

A boycott will not be effective unless most customers (those ignorant non-hobbyist consumers who don't know a radio scanner from an image scanner) are more interested in sending a message to Tandy Corporation (oh, yeah, they have to know who owns Radio Shack, too) than in getting whatever cheap gizmos they want today.

418. Question: phone conversation on air freq?

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: sdddr@yahoo.com
Message-ID: <37fb6411.1842859@news3.newscene.com>
Source record: 105381

Group,
Just wondering why I sometimes pick up phone conversations within
the aviation band (108-135).

Thanks
Waldo

I live in Wilmington ,NC And the Blue Angels Where Just here Sept 25 And 26......The Frequency that i heard them on Was..238.150AM That Was Used During pratice And the Show.....It may change from city to city....the way i found it was searching.... Good Luck..

Jason....Wilmington,NC

420. More Bad News About Tandy and Jack (r)(c)(t)

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: rachel0775@aol.comm
Message-ID: <19991006153330.12319.00000088@ng-ci1.aol.com>
Source record: 105383

When I was in China last month I saw the police and security which are run by the communist and opporesive government using Tandy Business Band Radios.

Seems that Tandy forgot what country the Scanshack was in.

Wait till the Re-educators get you in the "Education Shack".....joke

Also: I heard that my fried, Jack (r)(c)(t) was pushing his lawyer to sue gangs in the LA area in ordert to stop CARJack'ing (r)(c)(t); in his name.

So hereafter:

Anyone who elects to take a car by force, which Jack (r)(c)(t); objects to will be subject to suit for misuse of his official name and title, trademark, et al.

Jack (r)(c)(t) has always taken all measures to prevent CARJack (r)(c)(t) ing and hereby orders all parties to stop using this term.

If you dont know Jack (r)(c)(t) please refrain from claiming you do.

Also, note that is you do carJack (r)(c)(t) and the car gets a flat, you may not use a Jack (r)(c)(t) to fix the flat or the term therof.

Terrosists may no longer conduct any form of Hi-Jack (r)(c)(t) as the act is illegal and contains the word Jack (r)(c)(t), which is (c)(t)(r).

Jack (r)(c)(t) works with the airlines and the FAA to prevent dedicated efforts by terrorists to hi-Jack (r)(c)(t) aircraft and the use of the term Jack (r)(c)(t) in the work of hi-Jack (r)(c)(t)'ing may mislead people to think Jack (r)(c)(t) has a part of it, which he does not.

Hereafter;

any person, firm, gang, cell, group, coup, troop or otherwise who uses the term, phrase, title or moniker: Jack (r)(c)(t), shall be liable for misuse suits.

Any form of or use of the word:Jack (r)(c)(t) is a violation of this notice, no Jacking (r)(c)(t) around.

Please govirn yourselfs acordingly,

Respectfully submitted,

Jack (r)(c)(t)

Sometimes there are bleedovers and there are also radio systems that incorporate phone patches around the 120 MHz range.

Also: airphones, pilots on phone patches.

Hope this helps.

None as of yet

we are awaiting a return of information from Mrs. Angle of Tandy.

We called 2 times and are still awaiting something, regrets to users till then.

We want to put out fact, not fiction.

We trust you understand.

Gracias,
Thanks

Hahahahahahaha

Thats so funny.

and TRUE.

Call TANDY: 1800 THE SHAC
(843-7422)

Voice complaints and objections if any.

I understand it costs around 1/2 $ each call to an 800 number, hey someones got
to pay the bill right.

:-)

438. Tandy/Shack Scan Shcak issue Information.

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: republicamaro@aol.com
Message-ID: <19991006172903.12328.00000152@ng-ci1.aol.com>
Source record: 105401

Today a call was made to Tandy Company and Mrs. Angle, the purported writer of the original email to the Scanshack.

I explained that I ran a website, mailinglist and other ventures that exposed me to questions about this matter and wanted to confirm the issue.
Mrs. Angle stated;" email can be faked and without it I cannot verify it", a copy was forwarded to her at her consent and a followup call confirmed her receipt of same.

As of 5 PM EST a followup call was made to Mrs. Angle of Tandy legal department; she was not available, Media Relations was not available for comment either.

The items allegedly outlined by Tandy in the email were; the use of the title Shack, which is claimed as protected by Tandy Company, confusion by users of the web who find the Scanshack and could confuse it with Radio Shack and the illegal modification of scanners to receive cellular frequencies, noted is the fact that Tandy products are sold and used throughout the world and though FCC rules are important, they are not applicable outside the US where restoration, modification or reception of these frequencies are completely legal as is the use of Tandy products so modified.

The issue of confusion by unknowing users could be clarified by the site operator with a common disclaimer seen on website experiencing similar situations.

The term or word shack has been used throughout human language :
shack (noun): first appeared:1878

[Probably back-formation from English dialect shackley rickety]

1: HUT, SHANTY

2: a room of similar enclosed structure for a particular person or use.

At this time Tandy has not replied in regard to the alleged email, the ScanShack or these questions.

In the interest of impartiality we called Tandy three times and received no comment on any of those calls, therefore we cannot confirm nor deny this incident.

Provided below is the email sent to Mrs. Angle and the alleged email sent from Tandy to the Scan Shack

We will attempt to answer our users questions and posts made to us about this issue as best as possible.

Please do not deluge Tandy with calls or complaints unless justified.

Thank you,

Bill Ames

Subj: Email and my mailinglist- Bill Ames; Scan Palm Beach List
Date: 10/6/99 1:36:30 PM Eastern Daylight Time
From: Republica Maro
To: CANGLE1@Tandy.com (Christi Angle)

Christi Angle;

Hello, this is Bill Ames the person who just spoke with you today (06 Oct 99 at 1:20)

Just wanted to confirm the validity of this email that was sent to me by a member of the maillist I maintain for Florida before I let users post it or create a thread on this subject.

I just want to be as objective as possible with what is posted and always try to verify information before it is forwarded.

The other party in this matter, the Scanshack@aol.com is no longer a valid email address and I was unable to verify this email or the subject through him, therefore I felt it important to verify this item with you.

Thank you in advance for any assistance.

Should you have any further information it would be welcomed and posted concerning this.

Please reply to:

Bill Ames via:

Republica Maro@aol.com

-------COPY OF EMAIL---------------

Subj: Use of our registered mark "SHACK"
Date: 10/5/99 3:43:33 PM Mountain Daylight Time
From: CANGLE1@Tandy.com (Christi Angle)
To: scanshack@aol.com ('scanshack@aol.com')

Tandy is concerned about your use of its "SHACK" registered mark as your business name and internet site name. In the event that you were not aware, you are hereby advised that Technology Properties, Inc. (TPI) owns numerous federal registrations for its internationally recognized RADIOSHACK and family of other SHACK marks for a wide variety of consumer products and services, including scanners. Millions of dollars are spent annually by Tandy, the exclusive licensee of TPI, advertising products and services using these marks. the SHACK mark is of enormous value to TPI. Further Tandy as a responsible company has worked hard with local, state and federal

legislators to ensure that proper use of scanners.
You site appears to be one devoted to information exchange leading to the unauthorized modification of scanners for potentially illegal scanning.
Your use of our SHACK name and products on your site is no authorized by anyone at Tandy. Your use of TPI's registered SHACK name as your site name is likely to confuse the public into believing that is an affiliation between you operation and Tandy's SHACK operations. You may not realize that you are not permitted to incorporate another's trademark or service mark into your own site name. This association dilutes the strength and integrity of our SHACK mark.
Tandy must insist that you immediately cease using its "SHACK" mark as any part of your business's name or in your internet address.
Nothing in this e-mail represents an admission by Tandy or TPI that you have any righ5s in or to the "SHACK" name or mark. Tandy and TPI are merely attempting to inform you of their concerns and notify you of their rights before circumstances necessitate further action.

True, FCC laws are not applicable outside the US. Yet some countries
ban the use of scanners outright or severly limit their usuage.

441. Need Ohio frequencies in a .apf file please?

I've ordered the Percon database cd, but they say it will be a good week before I get it. I'm wondering if anyone could do an export of all ohio frequencies in a .apf format and possibly be able to email it to me? It should be pretty small in size, is there anyone who could do this? Thanks alot

An email?....come on tandy get real.
Since when does email constitute "proof of service?"

Leave the page alone let tandy spend the money to get a real "cease and desist"
letter sent to your residence with a real proof of service.

I bet the author of the email never did a real trademark search or they would have
said they owned it (scan shack) outright, nowhere does it say they own the term
"scan shack".

You received a simple "fill in the blanks and cut & paste" scaremail.

Ignore them for now...let them spend some of that lawyer money first on some actual
legal work.
is Christi Angle even a lawyer?

I'm not sure how long the term "Radio Shack" as refering to a shack where one keeps one's radio's has been around but I would assume it has been around alot longer than the actual store. I don't think Tandy would have a leg to stand on in any kind of legal case, its not like you are selling gizmos like radio shack sells on the site, or intentionally copying their logo or other trademarked items in an attempt to confuse their customers.

Notice that they mention "business name" first each time--it is their
primary concern.

If what Mr. ScanShack posted two months ago is true, then they don't
have a leg to stand on as there is no "business" being conducted
using that name:

For the record: I make no money from my site. Actually it cost
me money. (AOL monthly fees) It is strictly a hobby that I
enjoy. I believe enjoyment at doing something is more important
than money... that is if I am able to make money to support
myself and my family at my place of employment.... which I do
and can.

There's nothing wrong with posting cellular mods either. If there
were, Bob Parnass and Henry Eisenson (to name just two people)
would have been in trouble a long time ago.

452. So, take "SHACK" out of your vocabulary

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: Bruce or Tracy <bljacobs@hiwaay.net>
Message-ID: <37FBF7D4.9E1D0B58@hiwaay.net>
Source record: 105415

So, Tandy will sue anyone who has the word "SHACK" in their business name
or in their motto?

Well, let's just remove SHACK from the English language less we make reference to an "out house" and get sued as a result.

Shack is not their name, "Radio Shack" is. How can you copyright / trademark a word that is not even your company's name, just one word of the name?

Am I missing the joke or is this for real?

Bruce

Have you thought about consulting an intellectual property law attorney before rolling over so quickly? I, for one, would be happy to contribute $$$ to your cause (can't afford a whole lot but every little bit counts). There may be others who would do the same.

Remember, also, that until Tandy has a court order which directs you to cease you run only a small risk. If you refuse to comply with a court order there can be serious repercussions but not if you only refuse to comply with Tandy's demand. Demands are only worth about the same amount as the paper they're written on.....and in this case that ain't much since it was an e-mail!

Is it really that easy? Did you download the Freq Data
from some webpage somewhere?
Or did you have to pay extra for the priveledge of
downloading the data?
Is the data kept up to date by someone?

This software requires that you DIAL a phone number . Last time I checked
you can't do that with a cable modem.
READ THE MANUAL it is easy.

Hey bill!
I did the smart scanner thing today too. It worked very well about 250
channels all conventional I think.

461. Fedex / Dallas PD MDT

Newsgroup: rec.radio.scanner
Date: 1999-10-06 00:00:00 UTC
From: trspig <rlkillins@easynet.on.ca>
Message-ID: <7tgrna$9n8$1@bigdog.easynet.ca>
Source record: 105424
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Does anyone have any further information regarding the MDT systems currently in use by Fedex and the Dallas Police and Fire? I am curious to learn more about it, and hoping someone has had some success in developing/using a computer to intercept and interpret these transmissions.

If anyone can advise me of any Canadian agencies using this format, I would like to know which ... I beleive this to be a rare system and currently in use by my local PD in the 406 MHz range, but I don't want to assume if there are other users in my area using similar MDTs.

For those who are unfamiliar with the audio for this digital signal can sample it here ....

http://web2.airmail.net/lblant1/dfw/dig/dpdfedex.wav

Thanks for any and all comments. It's most appreciated.

>>Faster drivers are not inherently more dangerous, despite
>>the propaganda by the insurance industry. Most accidents are caused
>>by inattention, not speed. The speed limit is not mandatory unless it
>>says "Maximum Speed Limit" which appears on many highways

What a load of bollocks. The insurance industry knows full well that speed counts for all collisions. Two stationary cars can't hit each other. So, the amount of damage, the amount of death and injury are all proportional to the speed of the vehicles at the time of impact.

This crap about "faster drivers are not inherently more dangerous" is untrue, they are considerably more dangerous, you are just lucky you have not been hit by one yet.

As for "inattention not speed" being the cause, the major factor is still speed. It cuts down response times. After that bried period of inattentiveness, everything happens faster, including death.

Brad

463. OPTOCPM and OS456 questions??????

Newsgroup: rec.radio.scanner

i have a 2006 with a os456 and i am looking at getting a optocom. i have probe 5.0 and would like to know if anybody has this combination.

here are some questions i would like answered.

- can they both be used at the same time (in dos or windows)?
- can they be setup on the same sieral port? IE patching the radios together?
- can they reaction tune eath other? or one?

- can the optocom pic up cell phones (or a mode, key, or somehting) im not in the USA. so it is legal to listen.

if you would email me or post a reply it would help me alot with my next purchase.

thanks a lot.

***** IMPORTANT INFORMATION ***** Scan Shack web site is closing !!!

This message is to inform all of the closing down of the Scan Shack Web Site.
I received an e-mail from Tandy Corp (Radio Shack) saying if I did not do what
they asked in the message, action would be taken against me. I include the
e-mail below.
I will continue with the Adventures of Scanner Dweeb comic strip though which
will continue to be located at the URL:
http://members.aol.com/ScannerDweeb
I hope you all found some "good" value from the Scan Shack web site when it was
up and running.
Thanks to all who visited it..... Please continue to visit the Scanner Dweeb
site.
Below is the e-mail I received from Tandy..... as written.

Subj: Use of our registered mark "SHACK"
Date: 10/5/99 3:43:33 PM Mountain Daylight Time
From: CANGLE1@Tandy.com (Christi Angle)
To: scanshack@aol.com ('scanshack@aol.com')

Tandy is concerned about your use of its "SHACK" registered mark as your
business name and internet site name. In the event that you were not aware,
you are hereby advised that Technology Properties, Inc. (TPI) owns numerous
federal registrations for its internationally recognized RADIOSHACK and
family of other SHACK marks for a wide variety of consumer products and
services, including scanners. Millions of dollars are spent annually by
Tandy, the exclusive licensee of TPI, advertising products and services
using these marks. the SHACK mark is of enormous value to TPI. Further
Tandy as a responsible company has worked hard with local, state and federal
legislators to ensure that proper use of scanners.
You site appears to be one devoted to information exchange leading to the
unauthorized modification of scanners for potentially illegal scanning.
Your use of our SHACK name and products on your site is no authorized by
anyone at Tandy. Your use of TPI's registered SHACK name as your site name
is likely to confuse the public into believing that is an affiliation
between you operation and Tandy's SHACK operations. You may not realize that
you are not permitted to incorporate another's trademark or service mark
into your own site name. This association dilutes the strength and
integrity of our SHACK mark.
Tandy must insist that you immediately cease using its "SHACK" mark as any
part of your business's name or in your internet address.
Nothing in this e-mail represents an admission by Tandy or TPI that you have
any righ5s in or to the "SHACK" name or mark. Tandy and TPI are merely
attempting to inform you of their concerns and notify you of their rights
before circumstances necessitate further action.

If you can find a statement from the Surgeon General stating that they never issued warnings about smoking until the 1960's then I might believe you. Your third party facts are only hearsay - and worthless because it does NOT change the facts!

(Sorta like your statements that I caused problems on a Sea-Tac area repeater when the repeater owner says you are wrong!!!!)

This same question was asked a few mmonths ago & Igave this anser at the time. It is still correct. Perhaps I
should make a regular FAQ to post on this NG to answer the question you pose.

Subject: Re: WHO IS BILL CHEEK?????
Date: 1999/06/15
Author: jmackey <jmackey@usa.net>

Bill Cheek is a man who lives near San Diego. He used to be active on Fidonet but then had to leave due to reasons we won't speak of now. He then became active on this NG & the internet but was again the cause of much trouble. Various problems with Mr. Cheek's action's resulted in Peter Laws kicking him off of the "Scan-L" mailing list. More similar problems with Mr. Cheek caused him to have his internet access revoked by his Cable company ISP last summer. Recently he was briefly held by federal authorities and has been charged in federal courts with various illegal actions in regards to the use of scanners. He is the owner & operator of a company called "Comtronics" & has produced a few books based on information he has complied from various sources.

Note et el - Mr. Cheek has stated he is several different types of "Engineer" but has never been able to produce any Engineer credentials from any type of public or private body issuing such credentials. The most recent news has been reported that on SEPTEMBER 30, 1999,
A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF 18 USC 2512 (1) (A), (SENDING THROUGH THE MAIL OR CARRYING IN INTERSTATE OR FOREIGN COMMERCE, ANY ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING OR HAVING REASON TO KNOW THAT THE DESIGN OF SUCH DEVICE RENDERS IT PRIMARILY USEFUL FOR THE PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR ELECTRONIC COMMUNICATIONS.).

I hope this has been of help.

If you mean 000-0, then it is a valid TG. It would ordinarily be a
fleetwide group for 000.

If you mean 0000 on a Type II system, then I would say it's bogus, but I
don't know why you would be seeing it. Maybe there is some interference
that is causing the data to be distorted.

Since the 245 obviously uses very small LEDs for this purpose, you
might be able to take the blue LEDs available at Radio Shack and
cut down the plastic lens to suit your needs. If not, check with either

www.digikey.com
or
www.newark.com

As you know, Tandy Corporation is entitled to protect its intellectual property.

We will be notifying the owners of some 300,590 web pages that contain the word "shack" that it is our intention to pursue legal redress if they do not remove the word "shack" from said web pages immediately.

Be assured that we will be taking the same action in cases where words similar to "shack" have been used.

In addition to "The Scan Shack", we have already notified the owners of the following properties that infringe upon our trademark:

Sugar Shack - a song played on "Oldies" stations
Caddie Shack - a movie starring Bill Murray
Shaq - some sort of sports icon

To avoid further action, you would be well advised to avoid using the Tandy-trademarked word "Radio" on any web pages.

Yours in litigation

I have a nice DX-398 short wave receiver for sale. On a scale from 1 to
10 is an 9 on looks and a 10 on performance!
If you want specs look here:
http://www.rnw.nl/realradio/ats909.html
the ATS909 and the DX-398 is the same radio.
If you want to see a picture of mine look here:
http://www.webdeals.net/dx398.jpg
It still sales at Radio Shack for $249.99
$150 plus shipping ($5)

Or trade for one of the items below.

Solar panel 12 volt
UPS "unineruptable power supply"
Power inverter 60hz not 50hz
PRO-26
PRO-60

I'm not looking for any junk.

If I don't get any offers by Friday it will go on eBay and I know I will
get $175 or better out of it.

Why do I have the feeling this will go on as long as the Macky - Cheek crap?

Somebody is pulling your leg! Call Tandy/Radio Shack CORPORATE OFFICE and ask for this "Christi Angle". I bet she doesn't work there or doesn't know crap about it.

One thing I have seen and know..... controversy gets hit! For you and RS.

Naked hams and scanner operators live @
http://www.webdeals.net
Mod any scanner for cell and listen to the President and Monica.
NOT REALLY but it gets hits because the public loves controversy and
the thought of breaking the law!

502. Re: Railroad EOT or FRED decoding.....

Newsgroup: rec.radio.scanner
Date: 1999-10-07 00:00:00 UTC
From: Todd Person <taperson@XXXearthlink.net>
Message-ID: <7tjslhnfh1@ash.prod.itd.earthlink.net>
Source record: 105145
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The data transmitted by the EOT consists of trainline pressure (brake pipe) at the rear of the train, whether the rear of the train is moving (some report forward and backward) and when the flashing marker light is on or off. A 2 way EOT has a switch on the locomotive unit which allows an emergency brake application at the rear of the train in case of a trainline blockage between the front and rear of the train. BTW 2 way ETD's (as we call them) are required on western US mountain territory.

If you could catch something with a scanner it wouldn't do you any good as each ETD has a unique code that must be dialed in on the locomotive. That way when two or more trains are near each other the data will be correct for that train only. The FRED test mention by Dave is to check if you have radio continuity between the front and rear of the train. In other words you flip the switch in the locomotive to see if the rear of the train goes into emergency.

Todd
Union Pacific Locomotive Engineer

503. HELP!!!!!! pocsag decoder

Newsgroup: rec.radio.scanner
Date: 1999-10-07 00:00:00 UTC
From: Bonny Gijzen <bgijzen@h2deetoo.demon.nl>
Message-ID: <7ts8t9fne1@reader1.wxs.nl>
Source record: 105146

Help!!?!?!

I'm trying to develope a software pocsag decoder,
but I can't seem to get the synchronisation correct for the 1200/2400 bps
signal

I'm trying to implement this on a 80c320 microcontroller (MCS51 family).
I've tried almost everything, but still nothing.......

Does someone outthere know something about this?
I do hope somebody can help me?!

Thanks

Bonny Gijzen

Well if that turns out to be the case I'd say Scanner Dweeb is in a
heap of trouble with this group.

Excellent 5 year-old response. Nothing more is expected from you, loony.

Just 10 over the last 2 days. You must be sick? At least every single one is
off-topic. Again, nothing more is ever expected from you.

That's your life story, retard. You have NEVER answered a question that has been asked here for years. You have been asked to provide proof of on-topic postings. You have NEVER been able to. Your only response was to ask for someone else's proof of on topic posts. Proof, once again, that you are a hypocritical mental defective.

You need help. I truly think you believe your delusional spew.

By the way, what is a used-care salesman? Is that some type of Freudian slip from your bed-pan cleaning job?

I am going to be visiting the SEA-TAC airport. What are the police - fire freqs for the airport. I don't care about planes, I get enough of them!

How about the local police freq.s? Any web pages I can go to for the local city freq.s?

Thank you for your help!

As I mentioned earlier, this is crap, you have NO reason to respond
to them. In addition, any site that PROMOTES this hobby also promotes
Radio Shack. They can NOT afford to alienate everyone involved in this
hobby, especially when we are all so connected in such a public way
here and elsewhere. My returns go into the Oceanside, California
store this saturday morning. I mention this so they can "verify" the
fact.. This is the age of instant communication, and they have shot
themselves in the foot on this one! And, I might ad, they're foot is
in there mouth.
This smacks of another issue they pissed me off with about 20 years
ago. I was going to franchise a Radio Shack store, they would allow
NO FACIAL HAIR!!!!! I simply could not believe that one either. I
also never went into one of their stores for over 10 years. Guess I
will just never go back again after this. This company seems to have
ne real grasp of reality and there is simply too many other places to
do business with at far better prices. They have become like the 7-11
stores.....convienient, overpriced, and full of idiots. I am finished
with this company. I am sure, like the no facial hair fiasco awhile
back, they will rescind this stupid attack. I however am just simply
fed up with this outrage. Mike Cartwright

Im with you,

Why is Radio Shack using such tactics?

I always saw Radio Shack as a place where you could see new products, get
answers to all sorts of questions and find hard to locate parts and such, but
in these past few years they have become a whole lot less in this customers
eyes...

Did Sprint buy them out and take what brains they had?

Are they now mindless drones at the whim of some huge giant telco?

Did they even visit the ScanShack or just do some knee jerk reaction?

Well in my opinion, if the email was in fact sent by Radio Shack they would have closed in saying: "wana add the TSP or sign up for Sprint today ?"

I can say thet (Republico Maro) went to great length to answer all this stuff and still got nothing from them at Radio Shack.

When Radio Shack says satisfaction gauranteed, do they mean CUSTOMER SATISFACTION?

Im taking my complaint out in product returns to the store !!!!!!!!!!

Sorry, but I think you're blowing smoke.

First off, you don't really say anything on trade marks. It's NOT cut and dried. If it were, they there would never be any need for lawers, right?

I don't know trademark law, but I do know that the water is becoming muddied with the internet. PRIOR to this, there was some protection if there was no 'cross business'. The lawsuit from Beretta was originally dismissed as GM claimed Beretta was not in the automotive industry. However, Pietro Beretta appealed on the grounds that they license automotive products with their name on them for a number of years. It was back on, and when Beretta offered GM a way out (a huge donation to a charity in Beretta's name with the name to be phased out) GM jumped on it.

As to Radio Shack and full facial hair, well, that's just plain BS. I had a full face beard in 1979, and had to fly to Ft Worth for an interview with a VP. I shaved my beard and flew down. (Mid-December 1979) Of the maybe 12 people I officially met, 5 didn't have beards, and 2 of those were female!

Yeah, there were some BS regulations later on, about 1983 or 84 that had to do with 'representing the company', but there were NEVER any franchise requirements that I heard of. In fact, while Tandy for that time demanded a 'standard appearance' when representing the company, they didn't do that at all when internal. And even then, I knew of retail personal that had full facial hair. Although I will admit there was some scrutiny to 'keep it neat'. Nothing official, just 'pressure'.

If you want to blow steam at Tandy, do it for what they deserve, not made up bullshit. Hey, I could give you LOTS of stories about Tandy that would curl some toes!

A number of things I can't figure out...
Why is it so hard for "Ms.Angle" to simply state whether she sent an e-mail or not? Why does it matter to her whether the mail could have been faked? She should be able to remember whether she had to deal with a "ScanShack" website and the use of the term 'shack', shouldn't she? Would SHE somehow be liable if she admitted writing it, or not writing it?
She could save herself and Tandy a lot of headaches if she would admit or deny it with a simple answer to a phone call... wouldn't take her more than three seconds and the "truth" would finally be out, rather than all the speculation and hard hits at Tandy's expense (not that they don't deserve some ridicule for MANY blunders!)...
Why didn't they send ScanShack a real, registered letter by real post if this was so important?
Of course, there's the obvious question of the absurdity of the claim, and the "rights" involved with the term 'shack'. OR 'radio'. Or any of a number of ridiculous and questionable statements put forth by "Ms. Angle" or whomever wrote this mailer to ScanShack.
If it IS from Tandy, screw them, keep the site up, they haven't a case.
If it ISN'T from Tandy, keep the site up anyway, as there is no real threat.
Please check with all your local/state licensing depts', and have an attorney friend call Tandy and Ms Angle... two minutes with any attorney worth his or her salt and Tandy will have to cower away with its tail between its legs...
this is one of the most absurd claims I've ever seen! :-)

I think that the ScanShack should be renamed Scanners R Us.

BTW: The Shack is trademarked by RadioShack. Go to www.theshack.com and see where you wind up.

I believe McDonalds has a trademark on the name Mickey D's.

RadioShack sued Auto Shack. They are now called Auto Zone.

RadioShack probably has about a dozen trademark names. Micronta, Optimus, Patrolman (remember their old scanners? They still trademark that name.), Chronosette, Plug N Power, AntennaCraft, and a whole lot more.

Radio Shack and Scan Shack

Final Word

October 07, 1999
18:20 EST

This should eliminate the tide of questions about the Scan Shack issue.

This evening I spoke with Mr. Tony Magollas, the Public/Media Relations Manager of Tandy Company. Mr. Tony Magollas verified that the email was sent by Tandy: Mrs. Angle and for the specific reasons outlined in the email.

Mr. Tony Magollas also stated that Tandy does in fact maintain the position that unauthorized modifications that violate the law is a serious concern to the company.

Understanding that some users of scanners may choose to perform modifications which would then violate the law it should be pointed out that in this day we see product lawsuits and claims made to manufacturers of a variety of products for damages which arise out of misuse of products after sale and in complete disregard for the advice and guidance from the original manufacturer, the law and often peers.

Regarding the sites name, that could be argued in a number of ways; Tandy does maintain a position on the use of that name and stated so in the email.

When I got word from the creator of Scan Shack he stated that he assumed the email was real and took measures to comply with it. The conduct of the Scan Shack seems to be a prudent measure and from all appearances he did not create much of a fervor over the whole thing.

So in closing: The email was confirmed as VALID and Tandy stated its position on the subject of unauthorized/illegal modifications which they endeavor to prevent through customer education and product construction.

Concerns arose that with a similar name it could be misconstrue as an official or authorized web site which contained items which contrasted Tandy's policies. This is an ongoing problem on the web which is not limited to any one product or person.

I hope this answers questions posted to my guestbook, here on the newsgroups, in emails and calls.

Bill,

Thank you very very much for taking the time and work to confirm the matter. I really appreciate what you have done !
Thanks also to all who wrote in my defense to Tandy and all who wrote nice things on this newsgroup.
And even a small thank you to those who wrote they thought it was a fake, even thought it was me who was trying to get hits or attention... cause we are only human and I guess those who doubted were from the "Show Me" state.
Thanks again and everyone have a GREAT one !

Radio Shack and Scan Shack

Final Word

October 07, 1999
18:20 EST

This should eliminate the tide of questions about the Scan Shack issue.

This evening I spoke with Mr. Tony Magollas, the Public/Media Relations Manager of Tandy Company. Mr. Tony Magollas verified that the email was sent by Tandy: Mrs. Angle and for the specific reasons outlined in the email.

Mr. Tony Magollas also stated that Tandy does in fact maintain the position that unauthorized modifications that violate the law is a serious concern to the company.

Understanding that some users of scanners may choose to perform modifications which would then violate the law it should be pointed out that in this day we see product lawsuits and claims made to manufacturers of a variety of products for damages which arise out of misuse of products after sale and in complete disregard for the advice and guidance from the original manufacturer, the law and often peers.

Regarding the sites name, that could be argued in a number of ways; Tandy does maintain a position on the use of that name and stated so in the email.

When I got word from the creator of Scan Shack he stated that he assumed the email was real and took measures to comply with it. The conduct of the Scan Shack seems to be a prudent measure and from all appearances he did not create much of a fervor over the whole thing.

So in closing: The email was confirmed as VALID and Tandy stated its position on the subject of unauthorized/illegal modifications which they endeavor to prevent through customer education and product construction.

Concerns arose that with a similar name it could be misconstrue as an official or authorized web site which contained items which contrasted Tandy's policies. This is an ongoing problem on the web which is not limited to any one product or person.

I hope this answers questions posted to my guestbook, here on the newsgroups,
in emails and calls.

I was there at the inception of the ruckus.
Started on fido net scan radio echo. SCAN-Z1.was the actual name.

Cheek and I believe Macky got into a pissing contest over the use of WD40 as a cleaner/lubericant for electronic controls etc.

Mighta been another party, who was the original antagonest of Cheek. Screen name of Andy Moss comes to mind.

Neither had the good sense to let it slide, I just skipped the flame messages (Oh for a kill file in those days) and continued to enjoy the 'NET'.

I still stop in about once a week or so. (2-3-4 weeks sometimes) not much happening there now. Last stop was a message from the Echo Moderator asking if there was any reason for the Echo to continue to exist. Might still be there.

Good Signals... LCM

As long as Dweeb had disclaimers and these were for educational
purposes only. He IS protected by the freedom of speech.

>Regarding the sites name, that could be argued in a number of ways; Tandy does

BS!
As long as there are no regisistered trademarks from Tandy on that
site, then tough s**T!

>CALIFORNIA, NOT Missouri!

Nice choice of words laughing boy. You've just proven yourself to be a hypocritcal name-calling child. I remember a certain "holier than thou" alternate personality of yours that chastised everyone who used such language towards you. Of course I also remember when yet another alternate reality of yours surfaced and you were calling yourself "Father" Mackey. My how time flies... Now apparently alternate personality # 274 is appearing, John Mackey Esq, Attorney at Law... Baw, haw, haw, haw....

It was a figure of speech John. You know, Missouri? The "SHOW ME" state? For a moment I guess I had forgotten I was having a battle of wits with an unarmed man, instead of an adult conversation. My bad. Besides, when have I ever told you where I was born and raised? Is it too much to assume that it MIGHT HAVE BEEN Missouri? Where I am now or was a year ago doesn't mean I was born and raised there, which is usually what people are referring to when they say "I'm from such and such". But then who am I to expect you to think like a NORMAL person anyhow?
>
>
>> Show me the law that says I cannot monitor
>

>
>Here, read it for YOURSELF where/what he was charged with. If you
>have a problem then argue it with THEM!!!
>
>ON SEPTEMBER 30, 1999, A FEDERAL GRAND JURY IN THE EASTERN DISTRICT OF
>>NEW YORK INDICTED WILLIAM CHEEK ON ONE COUNT OF 18 USC 2512 (1) (A),
>>(SENDING THROUGH THE MAIL OR CARRYING IN INTERSTATE OR FOREIGN COMMERCE,
>>ANY ELECTRONIC, MECHANICAL, OR OTHER DEVICE, KNOWING OR HAVING REASON TO
>>KNOW THAT THE DESIGN OF SUCH DEVICE RENDERS IT PRIMARILY USEFUL FOR THE
>>PURPOSE OF THE SURREPTITIOUS INTERCEPTION OF WIRE, ORAL, OR ELECTRONIC
>>COMMUNICATIONS.).

I didn't ask what he was charged with. I asked you what law made MY MONITORING OF MDT DATA ILLEGAL. Pay attention Dufus. I still challenge you or anyone else to provide proof of a federal law against this activity. If the activity isn't illegal how come the device you use to do so is? How about it "Quick Answers" John Mackey? Got a retort for that one? I thought not...

See, here's the problem with you in a nutshell John. You just can't leave well enough alone. No, you gotta go in and put your two cents in no matter what the topic, as long as what you say makes BILL CHEEK LOOK BAD...

The guy is in a real mess right now John. The government is after him, the guy has cancer, and still you persist. If the cancer does take his life and his wife ends up in prison, what will you do then John? Huh? Throw a big party? Man, you really are heartless, gutless and brainless - all wrapped up into one.

Let it go. As I said before, leave this conversation to the ADULTS of this group who see this for more than it's apparent face value. Leave it to those who see the future implications of this case, should things follow their present course. Leave it to those of us who actually care about the hobby, and aren't here just to be trolling jackasses.

Thanks.

Butch Magee wrote in message <37FBFEB9.FDD3D171@netdoor.com>...
>Phil, chill a little bit man. It ain't nuthin but a thing. Hell, Bill knew he
>wasn't legal and was obviously prepared for any federal difficulty.
>

Did he? Was he? I happen to know that both statements are not true.

It ain't nuthin but a thing. I suppose the government using the exact same statute to outlaw the sale of scanners in this country ain't nuthin but a thing either. Until it happens.

I'll tell you what Bill knew. Bill knew that this kind of thing would happen sooner or later. He also knows and stated years ago that the day will come when any scanner you own is a violation of federal law. All this and more is already happening thanks to a majority of "safety over freedom" politicians' ideas of a utopian society. A society where everyone lives happily ever after as they slave and toil for their masters in government and big business, in the American Republic of Socialist States. That's why he cautioned his customers to keep their damn mouths shut - but some people weren't that bright and decided to post MDT data on the web. Big mistake.

You probably think I'm nuttier than a fruitcake, but what will you say if it happens? What will you say to yourselves and your children, knowing IT COULD HAVE BEEN PREVENTED!!!!!!!!!!!!!!!

Wake up, people. If you want to defend your personal freedom to own a scanner and a gun and all the other things the US government thinks you can live without, the time is NOW. Not later. Not tomorrow. NOW.

Scanners aren't the issue. FREEDOM is the issue. There are already enough pointless laws on the books. Why make more? Why turn any group of responsible contributors to society into criminals?! Why destroy a multi million dollar industry in favor of another? AND MOST IMPORTANTLY TO ME, WHY AM I THE ONLY PERSON WHO SEEMS TO GIVE A TINKERS DAMN ABOUT IT?!?!?!?

Am I the only one who cares if my government already - ALREADY - has the laws written that can make my scanner illegal, should they choose to enforce it? PLEASE someone back me up here! If I'm the only one who notices and cares than this hobby is a sitting duck!

Think about that before you tell me "it ain't nuthin but a thing." It's a rather big thing to me. Big enough that I still put it on the line and say we need a national organization that can unite us as one body, so that we can not only speak to our government, but also be HEARD. We can't depend on the manufacturers to do it for us. They have a whole world to sell products to, and most make more than just scanners. We have to do it ourselves.

Unless you'd rather take up lawn darts (might be illegal some day - you could take somebodies eye out!)

One question. How did Radio Shack get Auto Shack to change it's name
to Auto Zone?

When it comes to legal matters, corporations are very careful about things
they
will and won't say. I work for a large corporation (not Radio Shack) and it
still
amazes me the things they do because of legal issues. So it does not
surprise
me when someone will neither confirm nor deny anything that may involve
legal actions.

This in now way should be considered a defense of Radio Shack's "alleged"
actions.

P.S. I can neither confirm nor deny I actually sent this message.

Hi,
What I am looking for, and I did do some searching, is a site that could give me a primer on some basic radio technological terms or concepts. Specifically, I would like to be able to decipher scanner spec. sheets relating to such things as sensitivity, selectivity, IF Rejection Ratio and that sort of thing.
If someone could point me in the right direction or post their own explanations it would be greatly appreciated.
Thanks,
David

Yes, this has been known for over a year now. Once dealer stock
runs out on current RELM models, they will most likely be the
end of that short-lived line.

Source record: 105294

Picked up a BC245-XLT TT-II today! I hooked up the supplied serial cable to my modem, and proceeded to follow Uniden's simple instructions for doing a data dump of local frequencies based on my Zip code, from their database. It worked the first time, and was very slick! They pumped 169 frequencies, including trunked, and regular service, into my rig, for my 48092 Zip (Warren, MI).! Cool... very cool!

Life is good!

Hello. I am a writer living in Los Angeles who is interested in developing a character who has as his love, scanning the channels and listening to the different dramas that take place in what is a world only known to those who listen. I have no experience whatsoever in scanning, have no idea about the language etc. My father, ironically, was a radio communications man during WWII and one of his hobbies was as a ham operator - no fifteen foot plus antenna, but a great old tube machine that I always enjoyed playing with. I am also someone who has made a living working as a sound editor on films of all types, from small independent to big Hollywood, before I became a writer. Listening has been something I've done all my life and have wanted to have a character in one of my stories be able to show something of what it is to listen. All that said, if anyone has anything they can tell me or wish to start a dialogue, I am curious to learn and be directed in learning about what goes on out there. Thanks for your time and I look forward to talking with and getting advice from some of you.

Regards,

Thomas

Sitting here doing nothing while I could buy other interesting things.

R/S PRO-2006

Has cellular coverage restored and 400 channels. Works fine. I have the sccrew in whip and probably can find the manual. I don't save boxes.

Will sell for $ 200.00 local pickup -or- $ 230.00 if I have to pay packing and ship.

Don't be fooled by the price. It works fine. The price is to get it sold.

Call (732) 657 - 9339 and leave message or (732) 315 - 0604 for pager.

An FCC data dump is not usually helpful in these situations, especially when there are old frequencies still licensed that are no longer in use.

I presume that was in answer to the question of where else one could by Radio Shack scanners. If so, it is a silly answer. Where is someone going to get that brand-new PRO-92/94/2050 to sell on eBay besides Radio Shack?

Don't say "Grove Enterprises" either. They, too, have to buy Radio Shack scanners from Radio Shack before they can resell them. Buying from a dealer violates the boycott.

I picked up a good working, older Regency 800 Mhz - small 20 channel direct entry - no manual...the MX-4000. I've had experience with Regency but for the LIFE of me I can't seem to get the step increments out of "25" when trying to program 800 mhz freqs... trying to program freqs ending in .9125, .4375, etc. are impossible because the thing will set itself to .925 or .450 instead! It doesn't do this in the 380-512 range...just 800... is there a way around this, am I doing something wrong, or was this one of the reasons this model was a zero-charisma receiver??

thnx,
Rich

The software currently supplied by Uniden, for the BC245-XLT, will not work with a cable modem. A cable modem is totally different in design, and operation, from a regular modem. In addition to that, even if it did, your still required to dial-in to Uniden at a 1-900 number, to download frequency data. Currently, Uniden has no provisions for access via the Internet, to support data transfer for the BC245-XLT.

Currently, you can not perform this operation via the Internet, and/or cable modem. It requires a regular modem, although a computer can be used, it is not required. You dial a 1-900 number, I believe at a cost of; $ 0.90/min., to download the data. This is not a big deal, as the transfer of my 169 frequencies was very quick! Uniden claims their data is very complete, and they will review, and update it, no less than every six months. Seems fair enough.

Why not, as an interima measure, rename your site from the Scan Shack to the Scan Hacks. Anagrams are fun and it really is slightly more reflective of some of the options highlighted on your site.
Please do not let them completly shut you down. I understand that you are not reich and can not affoard to go to court over a "Hobby", but instead of giving up be inventive. If you do not like my suggestion for a name, how about Scan Shanty, scan hut or the one my wife likes the "scan radio". She wants to see if the try to stop you from using "radio".
Good luck!

Quarnstorm and I have never agreed on much except that Toilet Boy is a twit. However, I don't think you could classify Quarnstorm as vapid or banal and lacking intelligence. He has clear opinions and speaks them quite lucidly. From where I sit, it takes more that a modicum of intelligence to pull that off. I can't say the same for the friggin' loon Macaroon.

As for the title of full-time jerk, Toilet Boy wins that (dis)honor hands down.

Actually they probably do. But I think there is a big mis-communication here. Tandy most likely does have the right to enforce it's trademark in a business sense. However, the key will be how it is tied to 'business'.
Just being a web page for a product that Tandy markets is probably enough.

Tandy in all probability would have left the sight alone. They probably would have supported the damn site, except....

Yeah, the 'except'....

The problem is that right now site names are being 'grabbed' and hoarded. Some individuals over the past couple months have been trying to 'stake ground' with names, and I wouldn't be surprised if this were fallout from that.

As to 'Shack' well, trademark law is wierd. Just ask GM about the lawsuit with Beretta.....

Message-ID: <7tieft$r2l$1@nnrp1.deja.com>
Source record: 105329

To All It May Concern!

I think that if you contact your state board of licensing and registration
for trade marks, you will find that Radio Shack CAN NOT keep you from using
Scan Shack because they have rights as Radio Shack.

These are two entirely different TRADE NAMES, thus constitute completely separate individual entities!

Besides, amateur radio operators have been using the term Radio Shack to
mean the area that they have their radio equipment in since the beginning of
amateur radio.

I had a similar experience with the name of my business; DAT2 Communications.

The local chapter of the American Red Cross tried to tell me I could not use
DAT since they had "rights: to it. They said since their Disaster Action Teams were called DAT they had rights to it.

I contacted my local state licensing department and were told that I could
indeed use DAT2 Communications.

This would also mean that all of those restaurants that have "Shack" in their names are in violation of trade name laws! Restaurants like the Seafood Shack in Bradenton Florida!

You may wish to look into this further before pulling the plug.

Message-ID: <MPG.12667ff4a7e05dfa989682@news.crocker.com>
Source record: 105331

Hi folks. I'm wondering if anyone archived the information that used to be at http://www.geocities.com/CapeCanaveral/Launchpad/4039/ by any chance. This was an EXCELLENT page with vast amounts of information about pagers and data hiding in the VBI (vertical blanking interval) of various TV stations. If nobody has an archive, perhaps they know how to contact the author (or ARE the author)? Apparently the guy took the stuff down because of fears of being harassed by Motorola for posting proprietary information (at least that's what the existing page at that URL hints at; it's not stated explicitly). According to the hit counter on the current page, there have been over 5000 hits from people looking for this information, so obviously it's in demand. I've never found a resource as useful as this one when it comes to VBI information, and I believe the FLEX pager stuff was just as good, too.

If anyone has an archive of this, PLEASE contact me. I'd love to put it back online for everyone who wants it. If you're the author, please contact me as well. I'll understand if you don't want it going online again, especially under your name, but I'd love to at least talk to you about it.

<rant>
It DISGUSTS me that the Big Guys are out patrolling the internet for perfectly legal information they don't happen to like and are bullying people into taking it down with the threat of lawsuits. It's completely contrary to the spirit of free exchange of information and ideas that promotes progress and understanding so well, and which the net alone has enabled on a global scale for the average person. I can understand when we're talking about trademark infringement, lies, or intellectual property theft, but we're not - so much of what's being taken down these days is perfectly legal. Sure, the organizations who want the information gone will claim that it's not, but such arguments would never hold up in a real court. It's nothing but bullying - the big guys pushing around the little guys, and as is always the case when that happens, us little guys lose out. It's time to strap on our iron gonads and stand up to them. For my part, I intend to start posting "controversial" information that interests me on my web site, and not a byte of it will come down until a court orders me to take it down.
</rant>

Date: Thu, 07 Oct 1999 07:12:17 -0700
From: Greg Brazil <baycomm@earthlink.net>
To: mil <milcom@qth.net>

Freqs used yesterday when the BA's were flying into Oakland, Ca.
In the air all 7 were on 238.15. After landing and during taxing 1 & 2
used 238.15, 3 & 4 used 275.35 and 5 & 6 used 345.9. The ground crew
were using Motorola HT1000's on 170.9 fm. Today between 1-2 PM planes
1-4 will be flying to pick up navigation points. 5 & 6 will do the same
between 2-3 PM. At about 3:30 all six will be flying a short practice
show. Tomorrow at noon a complete air show practice will occur with the
Blues at about 3:30. I talked to the air boss yesterday and he
confirmed 127.05 and 123.15 will be his frequencies. More to follow.

>Radio Shack scanners.

You proceed from a false assumption. He asked where to go to buy HOBBY
scanners. And, since most Radio Shaft scanners are made by others
(e.g. Uniden, GRE), it'll always be possible to get the features you
want somewhere else (most likely at a better price).

Tandy and Scan Shack Update: 07 OCT 99

----------) U P D A T E (------------

Hello all;

To keep the thread to a minimum I have provided an up to the minute update on this whole issue.

As the creator of several scanning related sites, mailing lists and articles I have been sought out by friends, associates and users of my resources. In an effort to provide factual information I contacted Mrs. Angle of Tandy Legal the purported author and sender of the email to the Scan Shack which disclosed the alleged misuse of the word "shack" the provision of "unauthorized modification information"which was viewed by Tandy as a dedicated and major purpose of said site and Tandy Companies possible action should the site remain so named and so oriented.

On Wednesday, October 6, 1999, a call was made to Mrs. Angle and a followup call later made to confirm her receipt of the alleged email sent by her on Tandy's behalf.
Mrs. Angle initially stated that "email could be faked and without it she was unable to comment."

Subsequent calls to Tandy Legal and Media Relations went unreturned Wednesday.

This morning another call was made to Mrs. Angle who immediately stated that Media Relations would provide any further details regarding the matter at hand, regardless of her earlier agreement to provide confirmation or denial of the alleged email and the subject thereof.

The call was transferred to Media Relations where the Manager, Mr. Tony Magollas who was unavailable but would be returning my calls in response to the Scan Shack issue.

In contact with the operator of the operator of the Scan Shack it appears that he believes the email was in fact sent from Tandy and has already taken the site off AOL in expectation of legal action by Tandy, he expressed the sentiment that the work required to remove, update and reinstall the site was in his opinion better than facing the Tandy Company in a legal battle over the semantics of his sites name and content.

As we provide these details we are awaiting comment from the Media Relations Department of Tandy Company in Texas.

When statements are issued from Tandy and confirmed they will be posted to the ScanPB site, newslist and here.

In this time we can only hope that users will contain emotions and await factual information which can then be processed in an appropriate manner.

Please stay tuned for further information and updates.

Thank you,

>BTW, if you want you can create a web site called radioshack-sucks.com on the
>web and Tandy can't do anything about it as long as your statements are
>accurate and truthful. The EFF and ACLU have backed others with other such
>sites as AOLSUCKS.COM and dozens of others. U-HAUL tried to stop a web site
>that criticized it's business practices and the EFGA backed the site owner and
>they had a little out of court settlement which made the creator quite happy.
You need to be a little careful. For the reasons I pointed out in a
prevoius case, names like AOL and U-Haul and especially U-Haul, as
just names, are at best, very weak trademarks. U-Haul is clearly
descriptive, so it flunks. However other names exist that could be
trademark, and using one of them as a web site name probably would
infringe. For instance a web site built around a name like Pr1me or
Kodak is likely to be a problem because they do meet the name does
pass the trademark tests and almost any use of the name is likely to
be infringing, whereas the use of Radio Shack without the logo, or
U-Haul without the logo is probably not infringing since the name
itself isn't the trademark (it can't be becasue the names fails the
legal requirements for a trademark).

One of the reasons Xerox doesn't like people to use the name as verb
is that makes the name descriptive, which would cause Xerox to lose
trademark status.

Source record: 105342

A number of things I can't figure out...
Why is it so hard for "Ms.Angle" to simply state whether she sent an e-mail or not? Why does it matter to her whether the mail could have been faked? She should be able to remember whether she had to deal with a "ScanShack" website and the use of the term 'shack', shouldn't she? Would SHE somehow be liable if she admitted writing it, or not writing it?
She could save herself and Tandy a lot of headaches if she would admit or deny it with a simple answer to a phone call... wouldn't take her more than three seconds and the "truth" would finally be out, rather than all the speculation and hard hits at Tandy's expense (not that they don't deserve some ridicule for MANY blunders!)...
Why didn't they send ScanShack a real, registered letter by real post if this was so important?
Of course, there's the obvious question of the absurdity of the claim, and the "rights" involved with the term 'shack'. OR 'radio'. Or any of a number of ridiculous and questionable statements put forth by "Ms. Angle" or whomever wrote this mailer to ScanShack.
If it IS from Tandy, screw them, keep the site up, they haven't a case.
If it ISN'T from Tandy, keep the site up anyway, as there is no real threat.
Please check with all your local/state licensing depts', and have an attorney friend call Tandy and Ms Angle... two minutes with any attorney worth his or her salt and Tandy will have to cower away with its tail between its legs... this is one of the most absurd claims I've ever seen! :-)
Mike

>oday a call was made to Tandy Company and Mrs. Angle, the purported writer of
>the original email to the Scanshack.
>........

I sure had hoped it was a fake e-mail. I thought it was also at first but then checked with the counter service I have that logs the paths of the last ten hits to the site. One of the last ten hits came from the following path:

Oct 05 16:46:15 proxy1.tandy.com Internet Explorer 4.x Windows 95 1152x864 65K (16bit)

which told me that someone from Tandy indeed hit the site at that time. The e-mail was time stamped after that..... so I figured it was the real deal.... so I took the site down, etc. I did write to Ms. Angle using the scannerdweeb@AOL.com e-mail address. I too am currently waiting for her answer to my e-mail.
She may have said e-mail can be faked but when you look at the paths that e-mail took.... all the proxy servers point right back to someone in the Tandy chain. I sure hope someone didn't use her computer to play a trick on her..... please let me (all of us) know when she gets back to you.... I am probably the most interested party in this matter as I put a lot of work into The Scan Shack site.....
Thanks again......

>: Re: Tandy/Shack Scan Shcak issue Information.

From another post on this subject I saw the someone called her,
Mrs. Angle from Tandy Legal Department.
there was no reply to it as noted on the post today around 6pm.

under : Tandy/Scan Shack Update,

Tonioght I called the Media Relations office myself for some info but they were already closed.

So whats the final deal, did you close for good?

What plans are up?

Are they going to sue?

I loved the site, thought you put a lot of work into it and always had what I was looking for, and it wasnt even Mod info at that.

Best of luck in whatever comes of this.

Please keep us posted on the outcome.

For Sale: Ranger RCI-7100, 16ch VHF Radio

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=176663075

16 channels
5/1 watt selectable output
148-172Mhz
Built-in Scanning with Priority Scan
CTCSS/DCS/PL capable
Good Battery & Antenna
Comes with AC Charger
Get complete specs at http://www.ranger-inc.com/4b-ra_lmr.html

This is an excellent VHF two-way radio, at a very reasonable price! It can compete with major Motorola, Maxon, Vertex, and other manufacturers! Radio is in excellent shape (9 out of 10 cosmetically) and is in working condition. I no longer have the programming equipment so I can't program this radio for you, but it can be programmed by a dealer, or the equipment can be purchased from Ranger very cheap. Radio sold As-Is. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

Freqs used yesterday when the BA's were flying into Oakland, Ca.
In the air all 7 were on 238.15. After landing and during taxing 1 & 2
used 238.15, 3 & 4 used 275.35 and 5 & 6 used 345.9. The ground crew
were using Motorola HT1000's on 170.9 fm. Today between 1-2 PM planes
1-4 will be flying to pick up navigation points. 5 & 6 will do the same
between 2-3 PM. At about 3:30 all six will be flying a short practice
show. Tomorrow at noon a complete air show practice will occur with the
Blues at about 3:30. I talked to the air boss yesterday and he
confirmed 127.05 and 123.15 will be his frequencies. More to follow.

635. Cowlitz County, WA 800mhz

Newsgroup: rec.radio.scanner
Date: 1999-10-08 00:00:00 UTC
From: wilrobnson@aol.com
Message-ID: <19991008002014.29198.00000335@ng-fx1.aol.com>
Source record: 105160

I just came thru Cowlitz County on my way home from Oregon today, and have a question. All the police cars I saw in Kalama and Kelso had a cellular antenna, a VHF-high antenna, and a standard 800mhz antenna. I looked thru Police Call, but couldn't find any licenses for 800mhz freqs in the county (public safety.) Does anyone know what these are used for? I saw that the cars in Kalama have MDTs, could these be using an 800 freq?

Thanks,

Brett

A motor vehicle safety study released in Canada this week found that
using a cell phone, even with a hands free kit increased the likely
hood of an accident by fourfold. The study found that the reduction
of attention to driving was not reduced by the hands free kit.

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

> Seafood Shack in Bradenton Florida!

I don't agree there (from my limited knowledge of Trademark law as it exists current day in the US). Trademarks are used to protect words used to identify products in the marketplace. But this can only be done where there is competition among businesses in the same marketplace.

Using your seafood example, Radio Shack wouldn't give a rat's butt about the use of Shack (nor do they have legal grounds to do so) since Radio Shack is based largely on the telecommunications and electronics marketplace while your Seafood Shack is a seafood-based restaurant. They do not compete in the same marketplace so there is no potential conflict for consumers when identifying the two.

It's the same reason why you can use DAT without harassment from the American Red Cross. You two do not compete in the same marketplace so there can be no confusion, thus no possible Trademark infringement.

It's the same type of reason why there can be Delta Airlines, Delta faucets and Delta software. The name alone is not enough to protect your rights. That's why Trademark law also works in relation to the services/products offered by a business which dictates the market in which they compete. Airline travel, house fixtures and software do not compete in the marketplace so there can be no Trademark infringement. Since these markets do no compete, there is no issue of consumer confusion among brand/product names. No confusion means no possible Trademark infringement.

Radio Shack's reason for attacking The Scan Shack relates to the use of the word "Shack" along with the content of that site in regards to electronic products (some of them bearing the Radio Shack name itself). As was stated in the original append to this forum from the Radio Shack attorney, they were afraid of The Scan Shack and its electronicly-based material being conveyed by web patrons as Radio Shack "condoned" material. This is where the confusion issue comes in with regards to the electronic goods marketplace, and the reason that Radio Shack is trying to protect its precious name.

Does their case have merit? I think so...but just the tiniest smidgen. Keep in mind that there is an issue of a "famous" product name and/or serive but to protect this right, I would think that

The Scan Shack would have had to use the entire Radio Shack name to get into trouble. The inclusion, I feel, of the single word 'Shack' is not enough to link the two together and cause confusion to consumers who do know the "famous" Radio Shack name.

Unfortunately, to go on using The Scan Shack name without further harassment, The Scan Shack owner would have to pony up some hefty dough to go to court and prove his case. And I think he would win...but at what cost? At the VERY minimum, I think any lawyer could argue the case to a judge and have a verdict in under 5 minutes if The Scan Shack were to put a simple disclaimer about not being affiliated in any way with Radio Shack nor the material being condoned by Radio Shack. The issue would be closed.

If you wanted to drag things out a bit, you could even argue that such disclaimers aren't necessary given that The Scan Shack is not a company or corporation and does not sell "real" goods that would, in fact, be competing with Radio Shack. As such, no competition means no trademark infringement and therefor no legal grounds for Radio Shack to pursue the protection of its name.

Just keep in mind that I'm not a lawyer and certainly not a Trademark specialty attorney! ;-)

> You may wish to look into this further before pulling the plug.

I will agree with that! But for right now, I think that discretion is the better part of valor.

It's about a 50/50 mix now. It's probably NOT digital if it doesn't say so,
but that's not necessarily true.

Get the model number of what you are interested in and do a web lookup of the
product. I'm sure you'll find more useful info this way than dealing with the
salesdroid.

Right Now RADIO SHACK has a huge sale on the PRO-2048 Scanner, which include 800 Mhz less cellular. It is normally $229 now it is only $115, I bought one yesterday and I am very impressed with it. They also have one of their hand held "race scanners" with 800 Mhz less cellular for $120. If you ask me those are some awesome prices!!!!

Absolutely not.

I'm wondering, though, if Tom Leykis isn't right about the
"pussification of America." He basically says that, due to the
proliferation of single-parent, female-headed households, there is now
an entire generation of men who were raised by women and who saw their
male role models on the weekends (if they saw them at all). As a
result, these men don't know how to be MEN, and they do things like
pee sitting down because their mommies didn't want them to splash all
over the toilet seat. These men are also too PUSSIFIED to stand up for
their rights.

No doubt the founding fathers are tossing and turning in their
graves...

No, 'Dickheads' is for people who aren't lawyers, don't understand
or know the law, but try to make policy.

Actually (trying to avoid falling into the dickhead classification here)
I believe a trademark holder has to show some possibility of
consumer confusion. I read that Beretta vs GM, for example, was
originally thrown out, or argued to be thrown out, since GM maintained
there was no way consumers could mistake the name as
representative of Pietro Beretta, the weapons manufacturer (with
a 450 year history to back them up!). However Beretta countered
with the fact they do in fact market 'automotive' novelty products
(although not that widely, but that didn't matter) with their name on
them.

Tandy probably couldn't successfully go after a Pizza Shack. But
notice that I said 'probably' and 'successfully'. The internet and
wide area e-marketing have blurred what the courts consider
trademark infringements.

Guess what will happen next? Someone will get hit and injured by a motorist using a cellphone. The victim will then file a multi-million dollar lawsuit against the manufacturer of the cellphone. Some brain-dead jury will rule in favor of the victim. Then, you'll see cellphone manyufacturers scrambling to make their product "safe" and avoid additional extortions of their profits in this manner.

As much as I like to see the CTIA take it on the chin, I think this is
a bad idea. What next? No two way radios whatsoever? No broadcast
radios? No coffee? No mascara or shavers?

I think you can see where this is going. I think the insurance
industry can take care of this quite nicely. Those who are too
uncoordinated to handle a cellular telephone while driving will pay
higher rates. It's that simple.

Radio Shack and Scan Shack

Final Word

October 07, 1999
18:20 EST

This should eliminate the tide of questions about the Scan Shack issue.

This evening I spoke with Mr. Tony Magollas, the Public/Media Relations Manager of Tandy Company. Mr. Tony Magollas verified that the email was sent by Tandy: Mrs. Angle and for the specific reasons outlined in the email.

Mr. Tony Magollas also stated that Tandy does in fact maintain the position that unauthorized modifications that violate the law is a serious concern to the company.

Understanding that some users of scanners may choose to perform modifications which would then violate the law it should be pointed out that in this day we see product lawsuits and claims made to manufacturers of a variety of products for damages which arise out of misuse of products after sale and in complete disregard for the advice and guidance from the original manufacturer, the law and often peers.

Regarding the sites name, that could be argued in a number of ways; Tandy does maintain a position on the use of that name and stated so in the email.

When I got word from the creator of Scan Shack he stated that he assumed the email was real and took measures to comply with it. The conduct of the Scan Shack seems to be a prudent measure and from all appearances he did not create much of a fervor over the whole thing.

So in closing: The email was confirmed as VALID and Tandy stated its position on the subject of unauthorized/illegal modifications which they endeavor to prevent through customer education and product construction.

Concerns arose that with a similar name it could be misconstrue as an official or authorized web site which contained items which contrasted Tandy's policies. This is an ongoing problem on the web which is not limited to any one product or person.

I hope this answers questions posted to my guestbook, here on the newsgroups, in emails and calls.

If you're so f***ing upset, why don't you bitch at the real cause of this? Not at Tandy. Other than the fact that Tandy is backing down and playing scared, but at your congress representative or senator who pull such lame stunts like declare cell phone territory off limits to scanners? Or to the FCC for bullying companies that make, market, or service scanners to be afraid of releasing there service manuals or schematics to anyone what licensed repair shops? That these big powerful companies you seem scared about are afraid the FCC will invalidate their scanners, which are a big money maker for them.

Pissed at Tandy for not having backbone? Sure! That's justified. But I'll bet you don't even know who the hell your rep in congress is, or how he voted on the communications act. I'm not saying the last guy in line is right, but bitch at the cause, not the result.

So shut up! Until you bitch where the bitch belongs. THEN bitch loud and clear!

And yes, I do know who my reps in congress are, and they pretty much turn my stomach.

Mike

As I said, I'm not a Trademark attorney. My guess would be that
it had to do with the locality of the original business which
can be taken into account during Trademark disputes.

Well it doesn't and I'll tell you why.

WHERE is Bill's website? I have read EVERY one of his messages, and I have yet to see a URL. I have searched Yahoo and Altavista. No sites, references to his "numerous" mailing lists, nothing - not even under his name.

http://members.aol.com/republicamaro is an empty website. Nothing but a "private" directory that no one can see the contents of.

So far the only thing I know for certain is that both Scanshack/Scannerdweeb and republicmaro both use AOL.

What I'm having trouble understanding is how come all these other people have sent email to "Bill" (I can't verify WHO he is, if someone can, please do and I'll shut up about it), signed his guestbook, visited his webpages yada, yada, yada. But I cannot find this site.

Plus does anyone else find it odd that the SAME letter has been posted by the SAME person OVER and OVER and OVER?

It's almost like someone wants to make 110% certain that RadioShack looks like the big bad guys in this story. But so far I'm only hearing one side. Where is the original email? All I'm seeing is supposed confirmation, but the original email is nowhere to be found.

I can understand WHY they would go after the site - the mod info is VERY gray area, and I warned scanshack about it a long time ago, that it will come back and bite him in the ass. Which it apparently did, at least to hear him tell it. Again, I don't KNOW Tandy's side. This republicmaro person has yet to convince me. Since AOLer's can change their screennames at will, a usenet post is not enough to convince me of anything.

What I'm saying here, is that it's POSSIBLE (meaning it could be, but I cannot confirm or dispute at this point), that ScannerDweeb and republicmaro

are the same guy.

OK, take a deep breath, put away the flame throwers and just think for a minute. Maybe they aren't. But maybe they are. I can't tell. But doesn't the whole story seem..... fishy to you????

Something isn't adding up. We've been told that 2 and 2 are 5.... and are expected to just nod our heads and believe it.

>Something isn't adding up. We've been told that 2 and 2 are 5.... and are
>expected to just nod our heads and believe it.
>

Another note to add. I did some digging in Dejanews and found the first message ScanShack sent, that quoted the Tandy email. It is RIFE with typos, but then I know some people who send email like that. Then again, legal departments carefully screen every word they publicly say. I can't believe someone would just write an email like that and not proof-read it before sending it. That's VERY dangerous - a typo can change the meaning of an entire sentence, if it's misinterpreted.

Plus, this latest message was signed by Bill Ames, Creator ScanPB, PBScanlist, ScanlistFla. Well that's really interesting. Because the first one sent by republicmaro was signed by a person named "George".

Now I'm REALLY suspicious.

And the way this guy keeps posting the SAME MESSAGE again and again and again....

It's a proven method. Governments the world over have done it since WWII, including the U.S.: Tell the public the same thing over and over, no matter how absurd or unbelievable it is, and eventually, people will start to believe it. The Germans had their citizens believing that Jews would murder their own children. Some people STILL believe that lie to this day.

I'm not saying that Scanshack is making this up and I'm not saying he is telling the whole truth either. I happen to personally think the real story lies somewhere in between. But I am challenging the other members of this group to STOP and THINK for a moment before getting all upset over this.

Hey I admit it! I was sucked in yesterday, but I had decided to refrain from commenting until I had the time to study this a little closer. Now the closer I look, the more question marks appear....

Food for thought I suppose. But I'm reserving judgement until the evidence satisfies the burden of proof.

Shiva,

I contacted someone very high up at Motorola who told me they were waiting for the program to be released and then they were going to pounce. I don't have enough money to fight that or I would have told them to suck eggs and continued.

But because I am not a rich man, I was forced to publicly bow out. The project is still continuing without me. My problem was that I went public with the mailing list that we were using and Motorola sneaked in. I left it in some very good hands and expect the program to make a debut soon. I don't know when, because I am no longer involved, but progress is being made - that I do know.

Hey Phil..... here's a thought.... since you are so worried and you want to
study even closer why don't you:
1) Pick up the telephone
2) Dial the Tandy number posted on their web site for customer relations.
3) Ask for the person(s) Bill talked to, and refered to in his e-mails.
4) Tell them you are so concerned.
5) Ask them to verify the e-mail, story, etc.
6) Go to the radio.scanner.uk newsgroup where you can find Bill Ames via:
Republica Maro@aol.com posts about this
and see that his URLs are posted there along with his messages.
7) Go to the URLs and see....

Maybe that will ease your mind a bit.

For the record...
1) I received the e-mail from Tandy.
2) I am not Republica Maro@aol.com

But it is your choice to trust or not..... myself... I don't care weather you
do or not... It happened to me and not to you... so count your blessings....
and hope it never does.
Have a GREAT one !

Swifty,

Radio Shack has an online support site for their scanners. Here's
a link for the PRO-34 scanner:

http://support.tandy.com/support_electronics/26441.htm

The part you are looking for "might" be this one:

Reference P/N 11185048 STICKERS

That isn't much of a description so call their number and
ask for a more detailed description, which they have access
to on their computer (I've had to do this before!).
To order parts call 1-800-843-7422.

Hope that helps. Good radio, I've got two of 'em.

Does anyone have any further information regarding the MDT systems currently in use by Fedex and the Dallas Police and Fire? I am curious to learn more about it, and hoping someone has had some success in developing/using a computer to intercept and interpret these transmissions.

If anyone can advise me of any Canadian agencies using this format, I would like to know which ... I beleive this to be a rare system and currently in use by my local PD in the 406 MHz range, but I don't want to assume if there are other users in my area using similar MDTs.

For those who are unfamiliar with the audio for this digital signal can sample it here ....

http://web2.airmail.net/lblant1/dfw/dig/dpdfedex.wav

Thanks for any and all comments. It's most appreciated.

I don't know of a site myself but I think I can add to the confusion.
8-D

Sensitivity:
The number here will be noted in -dBm or uV (microvolts). I find -dBm to be easier to deal with, but some guys like uV. If the number is quoted in either it is usually referenced to 12dB SINAD. Confused? 12dB SINAD represents a signal that although noisey, is still intelligible. It is a widely accepted standard because it factors in all sources of distortion fron the antenna to the speaker. If the Rx sensitiviy is not referenced to anything, the measurement is meaningless. It could be referenced to 20dB of quieting which is less meaningful in that is the strength of the signal necessary to reduce the volume of the "hash" noise on the receiver by 20dB. It isn't used much anymore and is not equivalent to 12dB SINAD. A good VHF or UHF receiver will have a sensitivity of about -119dBm for 12dB SINAD, which is equal to 0.25uV for 12dB SINAD. Most scanners will not be this sensitive and you are more likely to see something like -115dBm for 12dB SINAD. The sensitivity will not be the same across the different bands of the scanner (VHF, UHF Air Band etc.). A receiver that is -119dBm is twice as sensitive as one rated at -113dBm (for 12dB SINAD). dBm is a voltage ratio so every 6dB represents a halving or doubling of performance. That's why I prefer them over uV. To confuse the issue some manufacturers use dBu - thankfully not many.

As a gross generality, a receiver that is more sensitive will also be less selective. That is to say, that it will be more prone to strong signal overload and adjacent channel interference.
There are a couple of methods of reducing this problem. One is triple conversion (as opposed to dual or single conversion). Ttriple conversion is also a good means of rejecting IF images. (Which will take me too long to explain, but if you've owned a scanner in a city you'll know about them) However, it must be remembered that each stage of the

reciever will add noise and reduce sensitivity. The design of the PLL Synthesizer also has a big effect on the sensitivity of the unit. Speaking in generalities, quick PLLs (faster scanners) are noisier than slow ones. The best scanners are a careful tradeoff of the many variables within the unit.

Now my fingers are sore from typing so someone else can tell you about selectivity. (which is more confusing because fewer standard measurements exist) 8-D

Cheers!

The Bearcat Trunk Tracker II, that I used in my review in the August 1999 edition of U.S. Scanner Online, quit working and I sent it in for repair on August 16th of this year. I checked the UPS tracking every day to make sure it got to Uniden's repair center in a timely manner, three days, not bad.

Every day I check their web site to make sure it got logged into their repair system OK. After 10 days, and it not showing as logged in for repair, I called to see why. I was informed that it was most likely still setting on the dock because they were running a little behind.

Around the end of the month it finely showed on the web site as having been received for repair. I received the card from the Uniden repair center post marked Aug. 31 with my SRO# and an estimated date of shipping back to me of 10/01/99. No I didn't type the wrong date, 30 days after it was logged in. That's 45 days after I shipped it.

They did send it back to me on the 8th of October. Well that's OK I guess. Its a bit long but at least I will have the radio back. However, IT DON'T WORK......

To make matter worse when I looked at the repair invoice I found the following:

Dear Customer, we regret to inform you that your model is no longer repaired by Uniden Service Inc. Please refer to our web site, www.uniden.com, on-line store or call (800) 554-3988 for a comparable replacement.

WHAT?????????

I checked into the web site and guess what? The online store doesn't even list the 245 as being available.

This is only the 481st one they made. The design drawing aren't even dry yet and they no longer service it, hell it is still under warranty.

I was unable to get any one on the phone. However, you can bet that come Monday I will. Boy do I feel an editorial coming on.

>3) Ask for the person(s) Bill talked to, and refered to in his e-mails.
>4) Tell them you are so concerned.
>5) Ask them to verify the e-mail, story, etc.

Calling such numbers rarely gets a real answer. No doubt they have been
inundated with some very nasty calls and emails about this which will make
them even less receptive to yet another phone call at this point. No, I'd
rather determine the validity of this without having to involve them, at
least until things calm down some..

>6) Go to the radio.scanner.uk newsgroup where you can find Bill Ames via:
>Republica Maro@aol.com posts about this
>and see that his URLs are posted there along with his messages.

So why were they never posted here? I know you don't know the answer to
that, I'm just making a point as to why they just don't seem... authentic.

>7) Go to the URLs and see....
>
>Maybe that will ease your mind a bit.

I will look for them. But before I pursue this wild goose chase, I'd like
Bill to tell me why he started out signing the Republica Maro messages as
George. Is he incognito or something? And why does he have to post the same
message over and over, like it's his new mantra or something? The message
even says it is meant to end the thread, but how can it when it appears 50
times in one day?!
>
>For the record...
>1) I received the e-mail from Tandy.
>2) I am not Republica Maro@aol.com

Well that's fine, but there's no way to PROVE it. So there's going to be
doubt in my mind. What I find disturbing is that several other people are
calling for a boycott based on 2 people's accounts of the story - two people
who only appear as a screen name on AOL, without bothering to verify any of
this. Do you see my point?

>
>But it is your choice to trust or not..... myself... I don't care weather
you
>do or not... It happened to me and not to you... so count your
blessings....
>and hope it never does.

Well it won't because I'm not dumb enough to post how to mod your scanner for cellular receive capability on-line. Sorry to be blunt, but I guarantee if you hadn't put that up there they wouldn't have cared what you named your site.

I seem to recall a tiff we had earlier in the year about this exact thing. The reason I got on your case about it then was to prevent this kind of thing from happening now. Sure freedom of speech and all that, but how warmly would your site have been welcomed if it was the "Bomb Shack" where folks could download all sorts of plans for bombs or something? Or the "Hack Shack" where you could read up on how to take millions out of any bank on the planet?

Now read what I am about to say VERY CAREFULLY because I'm only going to say this once:

Things like cellular scanner mods and bomb plans and hacker stuff and anything else like that is best shared quietly amongst trusted friends. Trust me on this. Learn and then share what you have learned QUIETLY.... Many people who are in jail or facing trial now over this sort of thing would not be there now if they had just followed that simple little bit of advice. Don't ever admit knowing any of that crap, or you are setting yourself up for exactly what allegedly happened to you, or worse. If you really must shout it from the rooftops, there are ways to do so anonymously. Even then, it shouldn't be done.

See, putting up information like that is just like running a stop sign while blaring your horn in front of the police station - someone who you'd rather not meet is going to take notice. And take action.

Ask yourself this: Do you think the ECPA of 1986 would have happened if scanner users had just kept their mouths shut? No, probably not.

Ask yourself this: Would Bill Cheek be facing a possible indictment and criminal trial if Keith Knipschild(sp) hadn't been a complete jackass and posted MDT data on his web page? No, probably not.

Ask yourself this: If Phil Smalley (yeah that's me) didn't publicly announce he was working on a RD/LAP decoder program, would Motorola have ever found out who was heading up the project? Doubtful. Now I get to face the inquisition if it ever does happen, thanks to my OWN big mouth. See? We all have done it.

Now ask youself this: Would the Scan Shack Web Site have been shut down if it didn't have cellular mods on it?

I think you know the answer. Live and learn.

In their instruction manuals, Uniden and Radio Shack refer the user to

http://www.trunktracker.com

and

http://www.trunkscanner.com

respectively. These URLs point to an extensive trunking database of
frequencies, fleet maps, and most of all, talkgroups.

Robert S.,

I enjoy your monthly online magazine. Nice tower in last months
issue btw. My scanners are suffering from a form of antenna
envy now, thanks! ;-)

Boy that sucks about your radio. I'm sure it is a screwup at their
end. From looking at the online store, it appears to only sell repaired
or refurbished radios (correct me if I'm wrong) so this 'new' radio
probably wouldn't be listed.

They do still show it as a new and current product on their main
website:

http://www.uniden.com/docs/product/prdetail.cfm?product=BC245XLT

Sooner or later you'll finally reach someone at their number. I would
insist on receiving a new scanner immediately as you have already waited
an unreasonable amount of time. They have had the opportunity to
fix it, now I'd want a replacement! I would also push for them to pay
for shipment as you have already paid to send it to them once already.

Keep up the good work and please post the results of your saga. I've
was one of the first group of lucky people to get a couple of 245s (one
went to my father) and haven't had any problems... yet.

I post local talk groups on my web page. There is nothing I have done
that is illegal to obtain these talkgroups and there is nothing to keep
other people from obtaining the talkgroups using the same methods
that I used. I was even contacted by a state employee about my web
page. Apparently someone wanted to know where I have gotten hold
of one of their radios. I was told they were considering reprogramming
their system. I had to explain to him that I did not have one of their
radios
and that if the system was reprogrammed, I would no problem getting
the new talks groups. I also explained that nothing I had done was illegal
and was not hard to do. I have heard nothing since.

A related (but off topic) question: in the absence of a trainline
blockage would the simultaneous (or nearly so) release of the emergency brake
via the brake lever AND via the EOTD result in any quicker propagation of the
line pressure change and thereby a quicker application than just the usual
"bighole"?

Snips

I live in Vista and haven't heard this, but there are a lot of VHF, UHF, and microwave sites on the Peak. It sounds like they are identifying a microwave repeater that is using clockwise polarazition.

Most of the RCS sites in San Diego County are linked via microwave, some use phone lines only, while others have both...

The below quote is from this site:
http://sulu.lerc.nasa.gov/dictionary/p.html

3. The response of the molecules of a paramagnetic medium (such as iron) when subjected to a magnetic field.

A right-handed polarized wave is defined as one receding from the observer and radiated by an electric vector rotating clockwise in a fixed plane that is in front of the observer and at right angles to the direction of propagation of the wave in question. Left-handed polarization is the rotation in a counter-clockwise manner.

This recommended definition of circular (or elliptical) polarization sense is according to that of the Institute of Radio Engineers.

The definition of classical physics is exactly the opposite.

Hope this helps...

Do YOU get it? The fact of the matter is this whole issue is a matter
of alleged trademark infringement and has NOTHING to do with the use
of a scanner as I stated originally. So don't give me that whacko
"he's a government supporter" crap because unlike some of you here,
infringement on the rights of scanner monitoring affects my livelihood
directly. The less info I get from the scanner, the more difficult it
is for me to do my job. So go back to your bunker in Montana and keep
the posts in this group on topic. That is they should be related to
the use of a scanner.

For the love of God, I wish this was a moderated group so I wouldn't
have to sift through all of this bullshit to find a few on topic
posts.

On 09 Oct 1999 17:16:10 GMT, iisergioii@aol.com (IISergioII) wrote:

I missed the original posting, but air to ground telephone (AGT) service
is contiguous with the cellular frequency spectrum.
Cell site transmitters use 869 MHz to 894 MHz.
So look at 894 MHz to 896 MHz or so. (I don't remember the exact
end of the passband.)
Al

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a L-Bracket screwed into an aluminum overhang near a roof, with RG-58A/U cable attached w/ BNC to a RS-2026.

I am getting very good reception on local police and high wattage repeaters but anything long distance, even with a repeater has background noise to it. I never had this problem before. I am using a MAXRAD MMC-150 high gain antenna. I live in northern NJ and I listen to CENCOM and MICCOM MICU dispatch which is in the 150MHz range and also 40-47MHz range with the same antenna ,as well as local police and NJ transit police.

My question is how do I elimate this background noise?? It sounds like a hissing sound.

Any ideas or tips would be greatly appreciated.

Bob D

You say you never had this problem before so did you change anything?

If you have changed nothing then start with the easy stuff first. The hissing is possibly caused by a reduction in signal strength so it is no longer full queiting. I would check connnectors, both ends. Is the outside connector sealed? Could water have gotten into the coax? Cable jacket not broken or split?

Thats a start. RG-58 is not what I would recommend unless it is a real short run.

Now if that got your attention here is what you might want to do to get to Radio Shack. Boycotts won't do squat and letters and phones call are PR practices sessions that are few and easily forgotten.

Go to one of the multitude of free web page providers and put your own (something) SHACK site.

Few hints for names of your site:

Not Radio Shack Radio Shaq RayDeeOH Shack Radio Shack Sucks

Well, by now you should get the idea. Then because you are all maucho freedom of speech rebels mail Radio Shack an invitation to come visit your site. Let's see who can be next to get a cease and desist notice from the Shack. When you name is targeted you pass it on to the next guy. Heck you could start a Shack Web Ring. Maybe each person should put up a ScanShack to get started.

Hey just an idea. I see lots of tough talk but little action.

Glenn

Actually, after very little thought I think one has to use all the words to effectively increase search engine hits to maximize clutter and confusion. If the Title of each and every web page had Radio, Tandy and Shack it would soon become simple to find hundreds of hits when searching for this most favorite subject of web sites.

The title of my first one would be "Welcome to my Tandy....I mean Dandy Web Site....My Ham Radio Shack!!!!" Or the to the point title. " Radio Shack is Chicken Manure. "

Hmmmm. But the problem is Web Space. NOT.

http://home.beseen.com/
http://www.acmecity.com/
http://www.y4i.com/freeusa.html
http://www.angelfire.com/
http://www.crosswinds.net/

http://www.freetown.com/free/index.html
http://members.xoom.com/freesources/webspace.html
http://home.fiberia.com/root/nph-redirect.cgi?/
http://www.fortunecity.com/
http://www.freeweb.org/freeweb/
http://www.bran.demon.co.uk/freepages/
http://www.homestead.com/

I found these in a few minutes using the keywords "free web page" and searching on www.dogpile.com . I would guess there are now hundreds of oportunities for hundreds of people to put up their own web page. Make one page and post it on a hundred sites? make hundreds post on one?

Then when you forget where your pages are you can do a search on www.dogpile.com using key words like "Radio, Tandy, questions, Shack" and receive hundreds of hits and probably never find all your web pages but wow it would look cool.

Nope Bad idea because if you ever wanted to find the folks at Tandy AKA Radio Shack you would have to muck through all those silly pages bitching about Radio Shack. It would be terrible PR for THE SHACK if people had to read that bad press and such when all the want is to get on The Radio Shack site to read "You got the question's....." jingle.

Never mind.....

I don't know of any WebSites either, but
"The Penguin Dictionary of Electronics"
by E.C. Young, © 1979 and 1988, pub. Penguin Books (U.K.; Aust.; Can;
and U.S.A) ISBN # 0-14-051187-3 should do.

And with a tip of the hat to Andy in the Big Smoke it defines
selectivity as:

"The ability of a radio receiver to discriminate against radio waves
with a carrier frequency different from that to which the receiver is
tuned. The selectivity is usually expressed on a graph that shows the
power ratio E/E° expressed in decibals against frequency, at specified
values of the modulation factor or index and modulation
frequency....."

There is a lot more (!), and it is all cross referenced. :+))

Hope this helps.

>ones.
>thx

Why don't you just ask one of the knowledgeable, helpful, salespersons in the store?

OK, seriously now, for Uniden☐ products specifically go to

http://www.uniden.com/

But whether it's Uniden☐, Panasonic☐, Sony☐, AT&T☐, or any others, if it doesn't say digital, or preferably digital spread spectrum on the box, I would assume it's analog. Price differences aren't too reliable. If the store has a return/exchange easily policy, a frequency counter and your 2006 should be able to tell you fairly quickly if it is or not.

The September 1999 issue of "Popular Mechanics"© magazine had a review of 900 mHz and 2.4 gHz phones and the analog or digital status of each.

Hope this helps.

Some cordless phones show the caller ID on the handset. Has anyone considered writing a program to decode the caller ID data transmitted by the cordless base, or has that already been done? I supposed each manufacturer has their own method of transmitting the caller ID to the handset which would complicate things, or is there a standard?

Barry

Let's go ahead and speak of them. No point in sugar coating it.
Bill left FIDO as FIDO is slowing down and gettimg much
smaller daily. He simply did not want to be around for the
funeral.

>internet but was again the cause of much trouble. Various problems

Participant in much trouble, but not the cause. We have to
be very careful in writing the FAQ, so that we are truthful.

>of the "Scan-L" mailing list. More similar problems with
>Mr. Cheek caused him to have his internet access revoked by his
>Cable company ISP last summer. Recently he was briefly held by

Actually, we probably want to rewrite this also. How about, in
the interest of being factual,

"Bills Cable ISP was hounded by a shattered wreck of a human
being, with false complaints about Bills behaviour in the newsgroups.
Finally, after recieving so many lies about Bill, they decided that
they would just cut off one subscriber to make their life
easier."

That makes a lot more sense, and is factual also.

>federal authorities and has been charged in federal courts with
>various illegal actions in regards to the use of scanners. He is the
>owner & operator of a company called "Comtronics" & has
>produced a few books based on information he has complied
>from various sources.

Hello RFEnforcer,

No.... a ruling if the disclosure statement is strong enough to make sure they feel there is no affiliation, as was brought out in the e-mail sent to me. Oh...and thank you for at least still saying I had a spine of some sort.... be it a bend and stretch model....
Easy to say in your shoes as you are not actually being targeted ..... not meant to be a slam.... it's just much safer when you are watching something, like a robbery going down across the street, and you are not the robbery victim... wouldn't you say ???

Maybe not. At the Dayton Hamvention I asked a Scancat rep why a Mac control software was not made to control Optielectronics and other similar machines and I was told that it required a mode of serial communications rarely used on the PC's RS232 port and that the Mac didn't have the ability to do it in the RS422 port. Don't know if this affects your setup. May want to ask the manufacturer.

And keep educating the public... Some of these jokers don't know that a Mac CAN run Windoze 95, 98, and NT, more flawlessly than many PCs. We just call it... "When Mac goes slumming."

Source record: 105125

Some of the Bearcat handhelds that came out the last few years had defective rubber antennas...the center pin in the BNC came loose and ended up stuck in the radio side of the connector. Check the antenna connector and be sure the center pin is in the ANTENNA not in the radio. From what I've heard, Uniden has been spotty about replacing them for free.

You don't *get* it.
The issue involved here certainly IS relevant to the newsgroup -- it involves the freedom of speech of someone who, far more than most, has taken the effort to provide helpful information for scanner enthusiasts.
chuck@nospam.la-radio.com (Chuck Rowe) is IMHO just what we don't need in this age in which scanning is under authoritarian assault by the govt -- short-sighted scannists who can't see the forest for the trees.

chuck@nospam.la-radio.com (Chuck Rowe) groused:

This is a legal matter and has NOTHING AT ALL to do with the hobby/sport of radio scanning. Take this off topic nonsense to alt.legal.advice or something. I think the ScanShack was a cool site and I wish him well but everyone should show a little respenc for the scanner groups and take it outside!!!

BTW, yes I know how to use my killfile thank you. There are about 10 different threads by now and I don't wish to be a Newsreader Administrator.

Happy Scanning!

Source record: 105129

I've really had it with Radio Shack.
I've been a good customer for years.
PRO-2004, 43, 91 & many incidental items.

I am seriously considering burning my Radio Shack Gold Card if they don't change their attitude about SCANSHACK and many other irritations.

Just me doing it alone will not have any influence, but if a lot of us, all over the nation, burn or cut up the cards in front of the stores, I think we can encourage a change.Publicity is essential. I don't quite know how to do it. I think what we need to do is organize on this NG, plan a date, and get the media involved.
What do you think?

Folks,

I am the writer who has been posting a notice about research I am doing. I did not know that it is illegal for someone to tell what is heard when scanning. (I told you I was finding my way around!) Someone emailed explaining this. Sorry, I didn't intend to put anyone

in a compromising position.

Regards,

Thomas

It may use a system that tramsmits directly over the over-head wire that
they get the power from. They do that in Pittsburgh I believe. I think those
comms can not be picked up on a scanner...

Yes, this is very important. Listen all you want, but keep it to yourself. If everyone did this, we wouldn't have the problems we have today with the government slowly outlawing our hobby.

I am planning to buy on of these units within the next two days. I agree
that Radio Shack has really goten on the bad side of everyone, but for
me there is not to much I can do. I would like a scanner, and I really
don't have all that much money. I know there is better stuff out there,
but then again, Radio Shack radio's are not the worst. I perfer on
buying things store by store. The Shack near my house is filled to the
brim with people who don't know a custermer from a dog, and would treat
both the same. The shack near my college is pertty good and the people
are helpfull and freindly. If there is a really good sale, then I will
concider the shack. Just my 0.02$

786. ScanShack news update 10 Oct (about e-mail from Tandy issue)

Newsgroup: rec.radio.scanner
Date: 1999-10-10 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19991010104933.04271.00000479@ng-bg1.aol.com>
Source record: 104993

This message is not being placed here to spark any new outcry, messages, etc. I post it because I have been asked to provide updates - so this is the latest on the issue. Any new updates will be placed here and on the main page of my site. I wish to thank all who have shown their support via e-mails and newsgroup posts.

For those unaware of the recent issues that have arisen and caused my web site to drastically change appearance, name and informational content, I submit the following brief historical explanation:

1) On 5 Oct 99 I received an e-mail at my ScanShack@aol.com address apparently from someone within the legal department at Tandy. (Radio Shack,etc) The e-mail received can be seen here: http://members.aol.com/scanshack/tmail.htm

2) After reading it, I assumed it was real (validity is still in question and undetermined) but to be safe I complied by removing the web site entirely. I then announced the web sites closer on the alt.radio.scanner and rec.radio.scanner newsgroups. This caused a flood of written concern. A small percentage of the posts I have captured for viewing here: http://members.aol.com/scanshack/tannews.htm

3) After reviewing some of the written suggestions I followed up and did some research on the numerous web site URLs provided by the newsgroup posters.

4) As the e-mail I received stated concerns of affiliation, I decided to add a strong disclosure statement on this opening page to help ensure anyone viewing this page that there was absolutely no affiliation between my web site and ANY business, company or retail chains operation. I also renamed the title of the web site and removed some material that the e-mail stated was illegal and they had great concern over.

5) On 6 & 7 Oct 99 a person, calling himself Bill Ames, (Creator: ScanPB, PBScanlist, Scanlist Fla, Republica Maro Soberano Republica), took it upon himself to contact Tandy via telephone to confirm this e-mail and issue. This person said (wrote) he talked with Ms. Angle of the Tandy legal dept and Mr. Tony Magollas, the Public/Media Relations Manager of Tandy Company. This person said (wrote) that Mr. Magollas confirmed the issue. This person posted the details of his efforts on the newsgroups. The actual posts can be seen at the URL referenced in line (2) or on the scanner newsgroups.

6) On 8 Oct 99 I e-mail replied to the original sender of the e-mail asking the person to view my site and rule on if the disclosure statement, new name and removed material helped ease their concerns outlined in the e-mail. I advised the individual my intent was to continue displaying and maintaining my AOL members web site I had established almost a year prior and hoped I could continue using the same AOL Screen Name and URL address

http://members.aol.com/scanshack/index.htm because it is linked on many other sites, book marked by others and is displayed by web search engines under the current URL, and has been for as long as the web site has been established.

7) I am currently waiting for a reply to my e-mail. I hope this reply will (a) help determine the original e-mails validity and (b) help settle this issue - as all this attention is not of the pleasant variety.

You are correct that you were not kicked off the FidoNet (as far as I know). You do remember that you "were" kicked off the FidoNet echo called SCANRADIO by Bill Cheek. Don't you?

I do! I was one of two co-moderators of the SCANRADIO echo at the time.

Your still the same as then I see.

790. Software for BC245-XLT?

Newsgroup: rec.radio.scanner
Date: 1999-10-10 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <RX2M3.8701$Pf4.47052@news.rdc2.mi.home.com>
Source record: 104997

Does anyone know if there is any software that allows you to read frequencies from the Uniden BC245-XLT, and save them to your computer, and allow you to restore them later?

Thanks,
Bill Crocker

I have an Icom IC-R2 Euro version scanner with
stubby Comet SMA501 antenna (and original antenna)
plus MH-C124S charger and 4 rechargable AAs, and
manual for $170 including UPS ground lower 48
states. Great condition.

I have sealed the coax at the mount with silicone. The only thing I did was change location to a higher elevation. I used 10/24 SS machine screws

Bob

I doubt the 10/24 SS machine screws make a difference unless you put them through the coax. I do know that some brands of silicone sealant will destroy your coax, it has something in it that is very corrosive. How long ago did you seal them? How old is the coax? My other thought is though higher is better your original location could have been a hot spot for reception of the signals you listen to. You did move the antenna and some there caused the change. BTW, what kind of antenna is it?

You'll never find a technoweenie working at Radio Shack. A friend of mine *used* to work at Radio Shack. He was most definately conversant on the nuts and bolts of their product line. He told me once while he was trying to explain to a customer what connectors and coax to buy to split his Cable TV and then wire up his VCR, his colleague sold 2500$ worth of AV equipment to another customer. Who got the bigger commission check that month do you reckon? 8-D

Years ago during college I applied for a part time sales position at RS. I didn't get the job. I must say I was a little disappointed. I was in there a few weeks later and met the fella who got the job over me. Pretty scary! I guess they look for something particular when hiring their staff. In this case they must have been looking for body-art.

Cheers!

Band A was intended for wireless service carriers, Band B was intended for
the traditional wire carriers such as Southern Bell,
Bell Atlantic, etc.
There is no real technical difference between the bands, as a matter
of fact, the extended spectrum in interspersed between the bands, i.e.,
the A' Band is a 1.5 MHz sliver inside the B Band.

802. NT4, scanner and NT Explorer crash

Newsgroup: rec.radio.scanner
Date: 1999-10-10 00:00:00 UTC
From: CADDman <chrishum@cftnet.com>
Message-ID: <7tqoboplv5@news1.cftnet.com>
Source record: 105009

Dear Sir,

Hi. Is anyone out there informed on NT4 enough to assist me in solving my problem.

This is my long-term, ongoing problem:

I am on NT4,SP3, on a Compaq Deskpro XL 5100. I installed many scanners (drivers only, no app software) on this system, only to discover that the UMAX 2000 functions with the least trouble. This is what happens: after a month or so of using the scanner, NT4 Explorer (i.e., file manager) begins to crash upon opening other apps, when it is a secondary app. I get the Dr Watson data dump, which ranges from 6 meg to 14 meg in length. I get the "feeling" that there is a problem inherent in NT4, somehow related to the Parallel port communications. There is a SIIG EPP/ECP PCI card to interface with the scanner.

Anyone have any ideas concerning what may be wrong with NT4 to cause so much trouble?

True solutions appreciated. It seems that I can't get anything out of Microsoft, and am once again left hanging out in the wind.

Thanks in advance,

Chris H

Wow, my Tandy stock just dropped 5 points....and on a Sunday no less. Yes, you have put the fear of God into Tandy now! I bet the legal department is churning out an apology first thing Monday morning. :-)

Sergio, they don't care. If you could cancel that 1.2 million dollar order you might have some leverage. Until then go build a WWW page if you are angry. Piss them off by makeing it impossible for people to search for Radio Shack with a search engine.

coax is 6 months old. I used black silicone, I use the same stuff for
sealing drilled holes in metal for lightbars. The coax was sealed maybe
week and a 1/2 ago. I sealed it where the coax is sottered to the M-Mount.
The antenna is a Maxrad MMC-150 and I switched to a MHB-5800, and I still
get the same results.

wrong!. They spent a great deal of money on old repeater pairs in the 800 band. They are also digital, that is why they cannot be eavesdropped on without the proper software and hardware to decode them.

lifeguard12@erols.com wrote:

Remember that they are usually different pl's encode and decode so that they done hear the other dispatch. Their system works.

And their extender is a simplex repeat type. Channel one on their handheld selects 192.2 pl on 154.905 - which in turn tells the vehicle extender to transmit on the mobile pair, and channel 2 which has a pl of 156.7, when the extender received 154.905 with a 156.7 it will transmit on the bases out put. and 3 has no pl to talk from HT TO HT.

Chuck,

I've had my 245 since they first came out and have been very
pleased with the results. I'm about 5 miles from their tower and
get full quieting with the supplied antenna as I roam from room
to room. I never loose the data channel. Even when I took it
to work (show-n-tell ya know), the tower was more than 10 miles
away and still had the same excellent results. OBTW, the local
system is EDACS. I am extremely pleased with the performance
and price of this radio.

I'd check to make sure the attenuator isn't turned on and that
the center pin in the antenna hasn't broken, which was common
with the 235s but I have already heard a report of one failing
on a 245. Anyone else you know in your area that has one that
you can compare it to?

Good luck,

Robert

Bill,

I'm using WinScan for controlling my 245. It is easy to save
your frequencies and change them for another saved batch.

More info on the software at this link:

http://mghusa.com/products/winscan.html

They have a shareware version you can download and
try. It can only be run for thirty minutes per session
and has a fifteen day time limit.

I have no affiliation with their company, just a happy customer.

I currently use Radio Manager and it allows you to save your entire radio channels. Then you can set up another set and save those. In other words have different sets depending on what u want to use them for. So far, I am pretty happy with the software. With the price it also includes Frequency Manager.

http://www.interplaza.com/scandfw/

The price is a total ofr $47 if you live in Texas. You may not like it, but since this is the first scanner that I have had that can be computer controlled, I really love it.

Greetings Chuck, others..

Your not too late! There is all kinds of information on the Web about APT reception and even if I mention quite a few here - someone will inevitably list something I didn't however, certainly check the following.

Good overview from the folks at Time-Step:
http://www.time-step.com/overview/overview.htm

Tag the words on the left-hand side of the screen titled - Weather Satellite Overview.
http://www.swagur.com/

Good illustrations:
http://physics.uwstout.edu/wx/wxsat/wxsat.htm

Weather Satellite FAQ:
http://ourworld.compuserve.com/homepages/hffax/satfaq.htm

For the truly worthy:
http://www.met.fsu.edu/explores/Steve/thesis.html

LARGE site and a lot of information - don't be discouraged by a few dead links. Notice WX-SAT tab:
http://ourworld.compuserve.com/homepages/HFFAX/

One that I just found:
http://www.mindspring.com/~n2wwd/html/body_weather_satellites.html

Some VERY nice equipment - this same equipment as sold by Swagur Enterprises. Clicking on the images will enlarge them at the Time-Step site.
http://www.time-step.com/apt/apt.htm
http://www.swagur.com/

How about a Hamtronics kit:
http://www.hamtronics.com/r139.html
I suspect that Mike Iisakkila believes in the Hamtronics radio kit, take a look at the results:
http://www.hut.fi/u/iisakkil/wxsat/

A very good source for the book shelf is Dr. Ralph Taggart's Weather Satellite Handbook as shown at the Amateur Radio Relay League's Web site. At the site notice on the left-hand side of the screen (scroll down a bit) Space and Satellites. Tag it and you'll be led to a screen (right-hand side) that shows what the book looks like. This

is the 'standard' for do-it-yourself APT hobbyist and even a good
reference for folks in the business.
http://www.arrl.org/catalog/

Chuck, this should at least get you started anyway..

Cheers,
Gary

My Bearcat 200 xlt seems to have drifted 5 KHz off in the 46-50 MHz range, ie: reception is much clearer 5 KHz above supposed frequency, on most signals. Is there a way to adjust this? Would there be a tuning change in higher frequencies (160's, 460's, 800's)? Would it be 5 KHz or proportional to the freq tuned? (no way to tell due to scanner step size, signals don't seem as clear as they used to be).
Thanks for any help, or info with similar problems.
Dan

Not likely, but considering that Radio Shack is expecting us to buy these radios like hotcakes, we could make sure the reviews are less than spectacular (remember the Panisonic up the GIGGY range phone reviews).

It's too bad since many of us were happy to hear these are supposed to blow the BC245XLT out of the water.

I wonder how many of us will consider not buying one of these because Of Rat Shacks BS attitude, Regardless of whether you like Scan Shacks site.

Sent via Deja.com http://www.deja.com/

If you mean the 820s-840s portion and the 870s-890s portion, the lower group are the cellphones' transmitting frequencies to the receiver sites, while the higher group are the base station (or repeater)-to-phone frequencies. The cellphones "talk" on the lower frequencies and "listen" on the higher.

Are you just too DUH to get it, or what ? This issue touches upon our relationship with Radio Shack, and issues about Radio Shack are, indeed very scanner - related. Lots of us are (former) RS customers, and use Radio Shack Scanners!
YOUR diatribes on the subject, on the other hand, have NOTHING to do with scanning ! You complain that "This is clogging up the news group", and yet, in the same breath, you refuse to use your filters !
As far as posting everthing to both groups, this is sometimes expedient, and is commonly done (new to the group, huh?)

> on this newsgroup, beyond a shadow of a doubt, that he
> is entitled to us the title of "Engineer".

I've been puzzled and even a little bit amused at the logic Toilet Boy (the moron formerly known as John Mackey) has employed here. Toilet Boy asked Bill Cheek for proof of his engineering credentials but never got them. (Bill proved them to me.) If I understand Toilet Boy's logic, since
Bill never produced the requested proof, that must mean Bill lied about the existence of the degrees.

Now, what if we apply the same logic to Toilet Boy and the numerous requests for proof of his claimed degrees? Since Toilet Boy has never been able to produce proof of his claim that he has a Masters Degree, in his logic framework that must mean he lied about his degree also.

In the interest of clarity and fairness, I submit that we should also include the veracity of Toilet Boy's claims in his FAQ.

Rick, I'd use either LMR-200 or LMR-400. Preferably, the LMR-400,
which has better signal/noise characteristics than RG-8. Check out
www.timesmicrowave.com for more info. I won't use anything else,
myself. BTW, I've no affiliations, etc., etc., etc., with
TimesMicrowave.

861. BC245 EDACS Trouble

Newsgroup: rec.radio.scanner
Date: 1999-10-10 00:00:00 UTC
From: chuck@nospam.rizzap.com
Message-ID: <3816a0b7.232490268@news.uia.net>
Source record: 105090

Has anyone found thier 245 to track EDACS very poorly. I've entered the local system freq's (verified and tested) in proper order and I'm very disappointed at the performance from my 245. I have to be very close (within a couple miles) to the repeater site to even aquire the data channel and once I do it is very intermittent. If I press manual and set a particular group ID it will stay briefly and the next time I look, I'm scanning again. This tells me that I briefly lost and re-aquired the data channel. By the way when I listen to the system freq's in conventional mode, they all sound pretty clear including the data channel.

The only reason I wonder about this is because my Motorola tracking performance FAR exceeds the results I get while attempting to track an EDACS system.

Has anyone had similar problems tracking EDACS with the 245? If I have to wait to send the scanner to Uniden (or whomever) for repair I'll probably wait until the Pro-92 is in my hand first.

Happy Scanning!

462 to 467 MHZ.
I don't know if you can disconnect the hand held antenna. I don't see why not. I know for sure the transmit power is less than 1 watt. It will transmits up to 2 miles under the right condition.

I use WinScan too but one of the things I don't line is the inability to truly "backup" the radio.

In order to upload or download group ID's, the scanner must be able to acquire a data channel in that bank. You can use a bunk freq but it's an extra step.

872. Another ScanShack update (PM of 10 Oct)

Newsgroup: rec.radio.scanner
Date: 1999-10-11 00:00:00 UTC
From: scanshack@aol.communicate
Message-ID: <19991010230532.08485.00000700@ng-co1.aol.com>
Source record: 104901

The following was added to the historical explanation section of my site this evening... I am providing this update for informational purposes only.. Thanks to all who have supported me on this effort..... you know who you are..
---
8) On 10 Oct 99, after some days of research (by myself and others who shall remain nameless at this time) was done, followed by electronic application filings and payments made...I added the following text to the main page of this site:

For the record, public display, and trademark/service mark common law rights and search information - I submit the following: The AOL screen name ScanShack, the mark ScanShack, and the ScanShack web site have been established and in use since Nov 1998. An Intent to Use application has been filed with and received by the United States Patent and Trademark Office (PTO). A PTO application submission serial number has been assigned for the ScanShack mark.

And the following text was added into the trademark information section at the bottom of the page: ScanShack is a trademark/service mark that has been used under common law rights since Nov 1998. The mark ScanShack has been assigned a United States Patent and Trademark Office (PTO) application submission serial number.

Have a GREAT one !

Hey Terry,
LYNS dude!

Man, its been ages since I was last on the SCANRADIO echo.

Unfortunately, Mr. Mackey has a very selective memory.

Best to ignore him as much as possible.

Cross-posted to: alt.radio.scanner,misc.consumers,misc.consumers.house,rec.radio.scanner

I have a question and if it does NOT belong in this group I am sorry for the post.
HOW does one block one's home phone # from showing on the bill of a persons cell phone? I am using *67 AND a 1-800 number calling card and yet my home number stills shows on the bill? It is her work cell phone and we pay for the calls but she does not want them to knopw my #. Is there anyway I can call another number first OR enter a code on my phone, prior to dialing(other than *67)? I am calling a Nextel cell phone in Orlando FL and I
live in PA. Any syggestions would be appreciated. Thank you

I never heard of the caller's phone number showing up on the bill,
even if the callerID shows up. If you block the number and/or you use
the calling card, the information shouldn't make it through the line.
I would recommend calling her cellular provider.

Also, try using a different calling card.

The "*67" is blocking the 'calling-from number' (which could be
any number) from the 1-800-number. NOT from the final call to
the cell phone.

Remember, the 1-800-number is one the actually placing the call
to the cell phone, not you.

You --> 1-800-number --> Cell phone.
\blocked/ \unblocked/

I assume "as a customer convenience" the 1-800-number calling card
people are doing you a favor, and sending the home phone number
that is registered to your calling card to the cell phone instead
of their own '800' number. This way, supposedly, the cell phone
person will recognize your home number and answer, or might simply
ignore an unknown '800' number being displayed on their phone.

BTW, since the cell phone has to pay for the incoming call air
time, I think they have the right to know who is calling so they
can decided if they want to "accept" the charges.

From: dscully@gte.net
Message-ID: <3802258a.1019056934@news.gte.net>
Source record: 104921

Hi All, I am new to this group. I have a new 2000 Suburban arriving soon and I am looking to upgrade my scanner. I was using the AOR 1000 mounted on a cell phone goose neck mount, externaly powered and feeding an amplified speaker. I liked the 1000 channels and the alpha display. I like the ability to load via Scan Star.

I did not like the small, poorly lit display and the cluge of wires attached to the unit. I would like to get a unit I can custom install into the dash, computer program, and alpha display. Most of the freqs I monitor are VHF, UHF, LoBand. Most of them are not trunked. These are in So Cal and Las Vegas area.

also looking for advise on antenna. I am not opposed to roof mount with a hole.

Thanks

Any Ideas?

893. Re: Tandy wants The Scan Shack web removed !

Newsgroup: rec.radio.scanner

From: Halket! <halket@bigfoot.com>
Message-ID: <38022BBF.40429165@bigfoot.com>
Source record: 104922

The following items are my opinion only:

1) Your website (ScanShack) is a great site and I hope you don't cave in to these people.
2) A comment about their intimidation letter. It says, "(TPI) owns numerous federal registrations for its internationally recognized RADIOSHACK and family of other SHACK marks for a wide variety of consumer products and services, including scanners." It does NOT say that they have any rights to ScanShack, just that they have the rights to a FAMILY of other shack names!!!
3) It is my opinion that this 'email' from RatShack is purely an intimidation letter without any merit or basis in fact.

Closing: I am not a lawyer, but have had several years of law. I strongly feel that this email you recieved is purely an attempt at intimidation. I would ask them to advise them to furnish a 'specific list' of all registrations that they claim (they can't), ask them to cite what 'registration' or law that they claim supports their position and that they advise this information to you in written form. Bet they fold like a house of cards!!!

"Just my opinion... and I might be wrong"

Have an old, or new, scanner you want to sell?

We buy radio scanners -

Desktop - Portable - Mobile -

Any number of channels (from 10 to 1000) -

Old or new (no crystal units please) -

Write with a description of your equipment and your asking price - cosmetic condition not terribly important, but unit must work without problems.

Thanks,

John
USA2Way
St. Louis, Mo.

USA2Way - Home of HHandiStand for all your portable radio needs.

If he doesn't, here are some other links worth looking at...

http://w5gb.nmsu.edu/kc5kto/mods.html
http://hem2.passagen.se/jillis/MODS.HTM
http://members.aol.com/bucherj/mods.html

These are only a few of the MANY websites that post
mods. It isn't illegal to post the information, only to
actually perform the modification. I don't post this
information on my website, though I do link to some
of them, because I try not to duplicate what is
already available.

I did send a letter to the Radio Shack representative
to express my views of their 'big bully' practice but
they have yet to respond. Glad to see ScanShack is
still hanging in there!

MIND CONTROL UTILIZING DIRECTED-ENERGY WEAPONS

Get the unvarnished truth about mind control involving directed-energy weapons and usage in the Cleveland, Ohio area of the United States--so far apparently censored by major search engines and a number of Internet service providers, so that I have to do my own publicizing. Even the Internet seems to involve a certain amount of censorship. Criminals who want to control the social structure unhindered by any legal restriction would rather relegate this report to an obscure corner of the Internet. They have been operating avowedly totally amoral for several decades now. Hardened criminals flaunt their amorality mockingly in front of victims, knowing police will not respond successfully to complaints. The cost of secrecy is high in human suffering. The criminals being sought do nothing but manufacture radiation weapons for the torture and destruction of humanity. As far as they are concerned, these weapons are for them primarily brain damage and torture weapons for use in combat situations, for planned wars of conquest. Any positive applications are lost. The objects of this "combat" are currently innocent, unarmed American civilians in their homes, and preparations may be underway to subject victims the world over to further atrocities.

YOU HAVE THE RIGHT TO KNOW !!!!

What you don't know could literally kill you or leave you vulnerable to total enslavement.

I have been tortured nonstop with radiation tortures for over two decades because a group of the mind controllers felt like committing rape back in 1973. I was 23 years old. They apparently committed a number of sex crimes against women, afterwards subjecting them to torture-murders. They always seal exposing themselves with a torture-murder which never ends until it successfully disposes of the witness (absurdly conscientious about security, fueled by greed, bent on securing military dominance). So after they had their fun they had goons stalk and torture me for twenty-six years, without five minutes relent--trying to administer and nurture organic brain damage at frequent intervals, not wanting to leave a whole witness intact. Still operating in

the same geographical locale toward the end of a twenty-six year period. No complaints to police are ever to any avail. There is no effective backup of citizens' rights forthcoming from the Federal government, whatever this implies. Signals may be difficult to trace and the opponent is hidden, perhaps in large numbers, it is acknowledged.

These criminals had apparently been abusing my brother Bill for almost a decade prior to switching to his sister. Bill was certainly easy prey. He seems to have been brain damaged pretty severely. (The criminals) Nazi-like, determined not to leave any family members standing for any kind of mutual assistance, insistent on total brutality.

I didn't know until I was struck that there was absolutely no privacy in my supposedly private home. Thugs enter at will and spy on all citizens' activities with no restraint, often out of pure voyeurism. Citizens are never informed of this until it is too late, perhaps when they decide to go up against the system in some respect.

So-called nonlethal weapons are actually lethal when used indefinitely without restraint. They are lethal under certain conditions. Most victims harbor some amount of brain damage, deliberately inflicted by literal cooking of their craniums with hazardous radiation by thugs. This is a primary method relied upon to seal in the secret, ensuring the triumph of totalitarian control and organized crime.

Criminals don't want you to know for one reason. They fear regulation. With total ignorance of the population they need not fear detection, limitation, or reprisal. Currently reveling in unbridled lust for power--murder whenever they feel like it, needing no concrete reasons. Claiming a national security purpose. Meanwhile, citizens have no security whatever in their homes. It is a misguided belief that the purpose of national security is served by suppression of information, which results in no legal regulation or preparedness for assault. Help stop them.

See my new web site at

dealing with my particular instance of victimization and whatever I have been able to find out. I have just started these web sites, which are still in progress.

There is a rally to end secrecy (of sorts) planned for Sunday, October 24, 1999, on the steps of the Capitol Building in Washington, D.C., but it is not entirely devoted

to the topic of mind control. Its purpose is distracted by the participation of UFO enthusiasts, Princess Diana assassination theorists, and other sideshows. But if you happen to be in the area and have nothing better to do, you might consider attending, bringing with you if you wish your personal one-page explanation. Pages of participants will be collated and later presented to interested members of Congress. I personally have nothing to do with the organization of this rally, which is independent and described on the Internet at

Realistic PRO-33, Model 20-134, S/N 791312

20 memories programmable
Uses 6 AA batteries

Covers: 30 - 54 MHz
136.005 - 174 MHz
380 - 512 MHz

This is a 9.5 out of 10 cosmetically. Works perfect.
Includes antenna, manual, and original box and packing materials.

$50 plus shipping. We can discuss payment method if you want it.

RG8U ought to be sufficient for this application. You might even get
away with RG58U if you do most of your listening at the lower end of
your scanner's range, or if your listening in UHF ranges is confined
to very strong local signals. RG58U will get "lossy" at UHF
frequencies, resulting in reduced performance or even total loss of
weaker UHF signals - hence the recommendation for RG8U.

73 and good DX'ing,

I disagree John. He should go with RG6U. Much better at the high end and cheaper.

Due to the non-standard baud rates used by many Motorola radios, many RSS software packages do timing by themselves, rather than depending on the UART in the PC. This makes virtual PC a no-go for most radio programming. You can usually edit a codeplug on the VPC setup, but must move to a real PC to read or write the radio. I would recommend a cheap used 486 for your RSS needs. New RSS is/will be Windows, however.

911. My Continuing Saga with my BC245.

Newsgroup: rec.radio.scanner
Date: 1999-10-11 00:00:00 UTC
From: Robert Smith <rlsmith@pacifier.com>
Message-ID: <38027a8e.0@news.pacifier.com>
Source record: 104940

After a vary frustrating mourning with Uniden 800 number I finally got to a public relations person that helped. She couldn't understand why they indicated on the invoice that the unit couldn't be fixed, when she puled it up in the computer they stated that they replaced the antenna and did some alignment to it.

To make a long story short, they have issued a pickup order for tomorrow and as soon as they have confirmation that it has been picked up they will send me another one.

I don't remember if I stated what the problem was or not in my last posting so
here is what I enclosed with this one;

Dear Mr. Repairman,

First, when I got the unit back from you it would not receive anything, not even U.S. Weather on 162.550. This is not the problem that I was having when I sent the unit to you, it was receiving just fine. So, this is a new problem.

The original problem was that it would not lock onto the control channel on a trunking system. This was not do to my not knowing how to program the unit in trunking mode, it had been working on the trunking system for over a month. One morning I turned it on and it would not lock on the trunk.

It would receive the trunk system just fine, but not lock in to the trunking mode using the control channel. I could hear the control channel and conversations on the trunking frequencies but could not follow them.

I am fully familiar with this unit and do know how to use it. This is the same unit that I used to do the product review for my publication, U.S. Scanner Online.

Please fix or replace this unit with dispatch, I have been without it for 60 days now.

I will post when I get the replacement unit.

913. Question about monitoring air traffic control

Newsgroup: rec.radio.scanner
Date: 1999-10-11 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <7055-38027849-90@storefull-137.iap.bryant.webtv.net>
Source record: 104942

I just rented the movie "Pushing Tin" and it is neat to see how an air traffic control system works. I don't know how much of the movie is accurate and how much is Hollywood, but it is interesting if you enjoy listening to air traffic. My question is, does anyone know of any good shortwave HF frequencies or other good freqs outside of 108-136 MHz. that would be good to monitor air traffic on? I have always enjoyed listening to air traffic on an air band radio because I think it's neat to listen to where all the different planes are going. Could someone e-mail me any shortwave HF frequencies for monitoring aircraft? Thanks!

Mike Brown

All of my credit card calls show the called and calling numbers. They
always have since by definition, that is the only way you can tell where
they are from and where they are to.

You can alway ink out the number from the bill.

RG-6 has the lowest loss of the bunch and for the buck. It is good stuf and gets better than the rest as the frequecy goes into VHF and then UHF. If RG8 was so great the satellite folks would be using it. :-)

Yea, that is what I am thinking also Tom. I did a news search and the comments lean toward silicone with acetic acid is a no no. Also it is said that some stay conductive while it cures. According to the postings it can take a couple weeks, guess it would depend on the thickness of the application.

Bob, Go get a hunk of RG-6 and give it a try. Bet it raises a smile. Hell if you don't like it Tom says he will buy it from you. :-)

OTOH, if you have an ohm meter check between the coax center and shield. Should be open.

Glenn

I think we should ALL e-mail Radio Shack and express
our feelings to them - let them know how indignant those of
us in the radio hobby are that they feel they have the right
to play God with anyone they wish, and step all over our
rights. Our rights as Americans are apparently being
eroded over time, by various groups and various means,
and this is just another example of where things are
heading...

No for the following reasons.

1. Not in their job description

2. The source of information would still be the government, namely
legislative who is just as untrustworthy. i.e. see Ted Kennedy, etal.

3. I basically could careless what is allowed or not. The rules of
engagement change on a periodic basis, as congress, state legislators and
other concerned bureaucrats get a hard-on for their pet peeves. See story
regarding mayor in suburb of Cleveland outlawing Cell Phone usage because he
does not have one or see use for them.

HELL, NO. This would be creating needless regulations on thousands of
retail workers for no damn reason. What sort of fines should we impose on a
poor salesman who forgets to say to someone "Oh, mobile use of scanners over
in Goober County requires a permit" , before he bags the XMAs gift?? Should he
go to jail, or be forced to pay a fine equal to a month's of his/her rent??
OH, & what about other products like Flammable items & asprin, using this
shit-ass logic people selling those items should "BE REQUIRED" to give
customers speeches about legal use ect of those items or they also would be
"breaking the law". How about the guy who sells you a six pack "Sir , I am
now required by the new stupid newsgroup-poster law to take 4 minutes of your
time to explain that in this county your passanger can't have an open can in
the car and.."
IF IT ain't broke don't try to fix it. How many children are currently
being hurt because we don't have a law that requires radi shack salespeople to
"say additional shit" about scanners before they take your money?? THIS POST
WAS BEYOND BELIEF!!!

Although the 895 can be DC powered, it's not really mobile. I hear the Pro-92 will include a CTCSS decoder. Maybe that would work better.

I was sort of with you until you got to number three. I'm not suggesting that scanners be outlawed because some politicians don't use them. The point I'm trying to make is that if there are restrictions at the time and place where a scanner is sold by a retail outlet then I think it would be a good idea if the seller were to disclose such restrictions to the buyer.

This can be as simple as simple as stuffing a booklet or single sheet of paper in the bag with the scanner when it's sold. I don't think that the seller should be responsible for keeping the buyer abreast of subsequent changes in the laws. I am only referring to time and place of sale.

I feel that if for example I can't use the radio in the car outside of the store then the seller should tell me about it. That's my opinion. :-)

The "satellite" bunch doesn't use RG 8 because it is 50 ohm cable, as opposed to the 75 ohm cable for video work. Also, RG-8 costs more and is larger and more difficult to handle and route. Check the specs on cable for yourself at <<http://www.belden.com>> .

These are hot off the presses, issued on 7/19/99, so not even Percon's site has listed these yet...

Rumor has it this will be an analog type II system and will replace our current VHF/UHF conventional frequencies. Plans are to upgrade to a digital system in 5 years so here's to hoping there will be a digital scanner on the market by then (or that Motorola will hold a basement blowout sale on Astro sabers! Won't hold my breath on that one.)

The reason for not going digital right away? The city doesn't want to be in the radio programming business. This is a smart move, I hope other cities follow this example...

Looks like the system will be a multiple controller system, they'll need at least 3 controllers for all those frequencies... I figure the system will need to be split in 3 chunks to cover the west side, the east and the northeast, due to Camelback Mountain and Squaw Peak. The system is also rumored to have the latest wireless data network available from Motorola, allowing full windows based mobile workstations to share text and binary data citywide. The data network may have it's own separate TRS, too. That would make sense considering the sheer amount of data involved to send pictures back and forth.

A quick search of this range reveals that the freq's are not in use yet. Until they are I can only speculate about the new system, but it is supposed to be completed by next year.

I'll post more as it develops.

You may be referring to the newer 1900 Mhz mobile phone band. That is called the PCS band by the FCC..Personal Communications Service. It is in GSM, CDMA, and ATT uses it with the TDMA modes.

Regardless it is cheaper and has lower losses. RG8 sucks when it leaves the realm of HF. For scanners RG6 is the way to go...quad shiedl rocks! Less loss cost less too.

Why don't you just spend the money and buy the software.

The Digital suite is not shareware, so don't waste your time here trying to entice people to pirate software they had to purchase.

Get a life.

OK the rules for FRS are kinda like this
250 mw output (1/4 watt)
FIXED antenna (no externals)

Now for what we can do. hehehehehe I opened mine up and put BNC
connectors on both. went to Rat shark and got 2 telescoping whips with
BNC's on them.. I did try to use my 440 ham antenna setup on one but
by the time the signal made the antenna it was a lost hope (line loss
SUCKS).... My next project is to hook one up to a 30 watt amplifier
and see how the match and all that goes.. I'll let ya know but the
whips I added made a little difference.

Seems to me that if Rat Shack sells trunking scanners,
then there can't be ANYTHING illegal about it. The e-mail
that RS sent to ScanShack says "...Tandy as a respon-
sible company has worked hard with local, state, and
federal legislators to ensure the proper use of scanners."

Hi,

I have always had an interest in listening to the local towns police departments, for local goings on. More for saftey I guess than anything else.

A workmate has a hand held scanner for sale and I am wondering what I should pay for it. It is a, ready, "Uniden Bearcat, Twin turbo, 100 channel, 11 band coverage, BC120XLT. It seems ok, but I don't know what to expect from a personal scanner.

I am also looking for some advice on getting my local police departments codes. Is there a book I can buy or web site where I can get them? (I have already set the frequencies.)

I would appreiciate any help you may have in helping me with my new hobby.

Thank you,

Debra

>RG8U ought to be sufficient for this application.

If you use RG-8, get the type with "polyfoam" dielectric, not the solid dielectric. The foam type has much less loss, especially at the higher frequencies, than the other. It's also a bit better than RG-6, but is larger and a bit more expensive. RG-8 doesn't have as good shielding as RG-6, but usually adequate unless you have a RF noisy environment, like computers near the coax.

What was the RD-LAP project being referred to here? It sounds like
yet another case of the Big Guys trying to squash us like bugs.

As far as my original request goes, I've gotten only one response
from someone who archived only a couple of the VBI pages from the
original GeoCities URL. Out of sheer desperation, I'll try again - if
anyone has any of that stuff backed up somewhere, PLEASE contact me! And
yes, "spamtrap@bleeding-head.com" IS a valid e-mail address.

When you call a toll-free number (800/877/888) your telephone number is
passed via a mechanism called ANI (Automatic Number Identification)
which is not the same as Caller-ID and cannot be blocked using *67 or
any other practical method. The calling card company can then pass your
number to whoever you are calling. I recommend finding a calling card
(pre-paid or otherwise) that has a local (not toll-free) access number.

Does anyone agree that Radio Shack (or any dealer for that matter) should be required to disclose any local restrictions pertaining to scanners for the area where it is being sold? I think this would eliminate the confusion of what's allowed and what is not allowed.

In the case of Radio Shack or any other large chain store maybe a faxback, website or e-mail based system could be used. I know they won't do anything they don't have to do but it would IMHO be a good idea to have a reliable source for this information.

I don't trust the local law enforcement to be truthful or knowledgeable about the rules in my area.

998. Scanner w/computer interface

Newsgroup: rec.radio.scanner
Date: 1999-10-12 00:00:00 UTC
From: Stan Olson <cuseo3@pen.eiu.edu>
Message-ID: <38037d03@news.eiu.edu>
Source record: 104989

I'm looking for a handheld scanner that is able to interface with a computer
to transfer frequencies. I need one with at least 300 channels and price
has to be reasonable. Can anyone recommend a site to check out for reviews
on certain brands? Thanks!

999. Decoding Two-Tone Sequential Paging Tones

Newsgroup: rec.radio.scanner
Date: 1999-10-12 00:00:00 UTC
From: WA3YSU <wa3ysu@nospam.hotmail.com>
Message-ID: <MoIDOOBo+PQSYLja66JbN8MoLhe8@4ax.com>
Source record: 104990

Decoding Two-Tone Sequential Paging Tones:

Does anyone have any suggestions on an easy way to decode two-tone sequential paging tones, such as those used for fire/ems dispatching?

I would like to be able to decode several of the local tactical and group call tones from the county public safety dispatch frequency so that I can order a two-tone decoder board for use with an old scanner. To creat a dedicated alert receiver, of sorts.

Any thoughts on hardware or software solutions?

Please reply through the group or direct by removing the "nospam' from the address.

Thanks!

1000. looking

By all means, get the "SOUTHERN CALIFORNIA DETAIL EDITION of Police Call,"
(as opposed to...or in addition to the Region 9 Police Call book).

Check out: http://members.tripod.com/~mountain33/osc.htm#pasadena for
police and
http://www.ci.glendale.ca.us/verdugo/freq.htm for fire.

AND go to the SOcalSCAN list at http://www.onelist.com/community/socalscan
subscribe to it.

Others no doubt will have other/better ideas!

Harry

Hello Chuck

As a member of the distrusted and uninformed law enforcement community I would like to suggest you go to the local law library and look up the laws in your area yourself. It would also be wise to obtain a copy of the laws that apply to scanner use in your area and have them handy if you come in contact with local law enforcement.
In every case where we have taken action against someone using a scanner they were in the wrong place interfering with an investigation.
I see scanners as a great tool for the public to keep an eye on what we do.
Just a question while I am at it do you know anyone in your local law enforcement community? Or do you just distrust us for no reason. Get to know us we are just good people working for a living like you.
Philip McCleary

To agree in part with both Chuck Rowe and Philip McCleary I think that some sort of warning should accumpany the scanner in states that have have laws against using them in vehicles, ect... I think however it should preferably be printed on the box or on a piece of paper sure to be found before using the scanner. I also believe that unless it can be proven the INTENT to obstruct(i.e. you were using the scanner to avoid the police for some reason[tickets, an outstanding warrant/s, ect]) there is almost no way you would be charged(although it certainly is possible with the District Attorneys people elect sometimes). The other issue in the original post had something about posting Talkgroups. I would like to address this also, federal agencies don't want a lot of people to know what is happening before or during an operation(remember the idiocy of the Waco incident, when the davidians knew the ATF SWAT team was coming), messages about their talkgroups are considered intent(i.e. if some says something about getting talkgroups for the secret service for the president being in town, the secret service wants to eliminate a potential threat before it kills someone) when the purpose suits them.

Thanks!
Cobra

There are a couple of possibilities for the Pro-51.

(1) Some models of this scanner had some test freqs preprogrammed into
the scanner. You could go to the test freq that was in the cell band
and then search up and down inside of the band.

(2) A virtual downcoversion mod can also be done with this scanner.

(3) Look at getting a frequency downconverter or making one. This
would allow you to use it easily on other scanners as well.

There is no delay between MO, LTR, and conventional. There is a delay
for EDACS, but I believe it is only about 2 seconds (will have to check
on that one to be sure).

If they are on 440 MHz, then they are amateur radio repeaters operated by either state government or local ham clubs. The ham operators in the area might tell you the tones, depending on why the tones are there in the first place. If they are used to limit interference from other transmitters, then the hams should have no problem with revealing the tones. If they are used to limit access to the repeater by non-club-members or other unauthorized users, then they will not tell you what they are.

I've never purchased a scanner whose package did not contain some sort of disclaimer (on the box itself, as a separate sheet of paper, or in the instruction manual) that mobile use may be unlawful in some jurisdictions.

Take a look at the Radio Shack catalog, while you're at it. It also contains such a disclaimer.

Well since you asked I have family members in law enforcement. I have no particular distrust toward cops but I think you would agree that if you ask the same question to five different people and get 5 different answers, someone is misinforming you. I also believe that the three out of the five who said that scanners were not legal may want want to disuade people from listening to them. Thanks for the reply.

I don't think that's a bad idea but scanner laws can vary from one
municipality to another and that would make for a pretty big box. :-)

go to www.rig.org.uk

have a look on the members pages and look for the word' Quadrifilar
Helix' go to that page.

You should find a reproducible design for the best 137 MHz WXSAT antenna
and total cost should be under a tenner.

Oh yes I forgot - you have to build it! You will learn alot and enjoy
it!

Source record: 104822

Ok, not really a scanner newbie but I just got my new toy

I just picked up an Optocom Receiver and it works beautifully with the trakkstar for non trunked systems, but I can't get either of the two local trunked systems to work.

System 1 is Old Bridge NJ which operates on 866.8625, 867.1375, 867.2750 and 867..9375. It is a Motorola Type II System.

System 2 is is East Brunswick NJ which operates on 500.3125, 500.4375, 500.5875, 500.8375, 502.4875 and 502.6625. As best as I can tell it is a Motorola System with an unknown type. I have tried fooling around with the settings.

Both data channels are easily nabbed in normal mode so that isn't the problem. I am really at a loss as to what could be going on. Any advice would be appreciated.

Jeff

>Regardless it is cheaper and has lower losses. RG8 sucks when it leaves the
>realm of HF. For scanners RG6 is the way to go...quad shiedl rocks! Less
>loss cost less too.

Well, RG-6 certainly costs less. And as for loss, it depends where you're looking. RG8 foam (like Belden 89913) edges RG6 (like 9114) out in the VHF and UHF frequencies, which is where most scanners are looking. Above 500 MHz or so, RG6 broadband loss characteristics are better and have lower loss. Check various loss figures out for yourself at:

<<http://www.belden.com/Products/Catalog/allcat2.idc>>

The difference in VHF and UHf between the two isn't worth the added cost of RG8, so I too, would recommend RG6.

I believe the pre-amp Radio Shack sells is the same as the GRE Super Amp.
Adjustable 0 to 20 dB gain. Using the pre-amp I am able to listen to a
couple
of local trunked system on my BC235 TrunkTracker in my office that I
would not be able to hear otherwise. Works like a charm. I use a 12V
wall adapter to keep from running down the battery.

Hope this helps.

If you monitor radio scanners either for at work or at home for entertainment, you know all to well how hard it can be to listen to all of the "good stuff" at once without missing the other calls. You also know that you can't monitor the radio's 24/7. Fortunately there are services available to send you the information you want directly to your alphanumeric pager! Many of the services have reciprocal agreements with services in other states, so you can also choose to receive incidents from throughout the country. For a list of what may be available in your area go to http://csimmont.home.mindspring.com./ For those in Arizona go directly to http://www.axtek.com/n7qyk/icp.html .

Hi all....while boycotting the shack may seem like a good idea, it's not really more than a drop in the bucket- Tandy owns so many subsidaries that you probably shop from that they still make their money off you. As a former Shack manager, let me give you some hints on what to do to make our voices heard:
1) call your local store and ask for the name and phone number of the district manager. (If they refuse to give it, tell them its not a store issue).
2)Want to annoy them? Write letters to John Roach, President of Tandy and one to Len Roberts, the VP in Fort Worth(less).
3)To those of you who shop at places such as 'Scottys', they are owned by Tandy; see what I mean about subsidiaries?
4)Hurley State bank in Tennesee is the bank that the RS charge system goes thru. I dont recall if they still own it- if so or even if they don't, if you have an account there remove it and tell 'em why.
Best boycott of that place for me was quitting
Bill

WOW! How far beyond belief are we talking here? I hope I didn't get you too upset. I was only expressing my opinion. I'm not trying to protect innocent children but rather the innocent scanner hobbyist from getting his scanner taken away because he and the guy who sold it to him didn't know the local laws.

I'll tell you another thing while I'm at it. I've asked five cops in town here about the legality of scanners and I've gotten almost five different answers. I sure hope that the guy who said "scanners are completely legal" is the one who sees me with one on the street because I don't know who's right or wrong. I guess that makes me and others like me stupid huh? Be that as it may I'm not hiring an attorney to find out for sure!

Stan,

Some of the new generation of scanners have a built-in computer
interface (BC245XLT, PRO-64, etc.). Rich Well's has great
online reviews of many popular scanners:

http://www.strongsignals.net/htm/radios.htm

Manually entering frequencies has always been a pain, especially
as the number of channels increases. My PRO-2042, for example,
stores 1000 channels. John Montalbano has designed an interface
that works with either base model scanners or handhelds. This
allows ANY scanner to be connected to your computer to control
the scanner and download frequencies. More info on this interface
can be found at John's website:

http://www.qsl.net/ka2pyj/index.html

For anyone who is interested in having this mod done for them,
I offer the assembled kits and/or installations. I recently modified
the following radios: PRO-34, PRO-43, BC3000XLT, BC760XLT,
PRO-2042, PRO-2026, and PRO-2006. With the external
version of the interface, the one interface can be used on all your
scanners. More info at these links:

http://dune.globe-net.net/~rc123/Robert/PROgramit/PROgramit.html
http://dune.globe-net.net/~rc123/Robert/Services.html

I have a Radio Shack PRO-60 200 channel handheld scanner for sale. This unit is triple-conversion.
It's in excellent condition. Included with the scanner is the stock antenna, two NiMH AA battery packs, a cigarette lighter adaptor (the Radio-Shack multi-voltage one, deluxe), fitted leather case, and the remainder of the Radio Shack TSP (warranty) I believe at least 3 years left!

This scanner is in excellent condition. It was mounted in a grip-mount in my car for the last year. There are no blatant marks or scratches.

I'm asking $150.00 (firm). I'm looking to upgrade to the BC-245 XLT.

Please email with any questions or serious inquiries, kb9dbc@interaccess.com.
Serious Telephone inquiries at (630) 282-0582.

Find the minimum capacitance needed to drive the sound card and also the minimum required to run the data slicer. If the total of these capacitors is small enough that it does not overload the discriminator chip, then it is a simple matter of tapping the discriminator with 2 capacitors - one going to your sound card and the other going to your data slicer.

If the total capacitance required to run both devices is too high, a smaller cap and buffer circuit using a 741 may be required to give that extra output required.

...the fact that Mack-stunk cannot keep from slamming
Cheek still indicates much wrong with this mis-nomer of
a human being....right, how many people over the years
has Bill taken aside and given his all to help them in their
hour or minute of need in the radio field?

...I've been a friend of Bill's right from the start after
reading
` his first entry upon my coming upon this NG. Seems he
enjoyed
my postings also and in time we found much in common.
Mainly
we had an understanding: we were the 3 percenters.

over the years Bill and I found similar funnies and enjoyed
the
banter muchly.

whereupon I discovered this: If Bill Cheek trusted you and
said
that to me or another 3 percenter, I trusted that person.
There
are about six or seven that fit that designation: good
people.

...and Mack-stunk claims to be so much moah bettah den da
Cheek-guy. What has this louse ever done to help people on
the net NG? Has this miscreant ever gone the extra mile
with
anyone to help them become aware of his "superior mind"
full?

that is the mark of a good man: he who helps and does not
remind you of it...he just enjoys being able to be of some
help
to get an anser for you.

Cheek helped. You needed Bill, he helped. He was just
there
if you wanted help.

Where is this Mack-stunk when answers are given? Between
his mama'a legs. That's the only place he can get
help...but
giving it, how?

The people who slam Bill are themselves to be pitied.

They are not members of the "3 percenters"....

Cheek is a very funny fellah. You have to be a "3
percenter"
in order to know how to laugh with him and enjoy his
mind-full.

I think Mack-stunk hates Bill because he is not a "3
percenter"
and will never be one. But then too so are most of the
other
losers who slam Cheek the way they do.

bill was always there....to help. How many of you qualify?

And you denigrate him thusly. What makes you so low?

Must be DNA...mama's to blame.

bill conduit
etc.

PS: why not just allow Bill his space now and quit this
kicking him while he's down. he's not part of this
NG any more. So accept it. Quit trying to make
yourself look important by trying to bring yourself
down to the level of those like Mackeral and others
on the NG?

Nextel uses Motorola's iDEN system. iDEN uses QAM with TDMA and VSLEP vocoding in a 25 kHz channel. D-AMPS uses the same technology, with a small change - 3 time slots insted of iDEN's 4.

Short answer - get a hold of a D-AMPS phone, make it do 851 - 868 MHz Rx, and 4 slots, and you'll be listneing to iDEN traffic.

Hello folks. I just took a look at the RS catalog for 2000 and I saw that for some handheld scanner models, they had a device that you can stick your 4 regular batteries into that replaces the baterry pack. I was wondering if such a thing exists for the pro90? I am talking about a plastic shell type thing I could put 4 Nicads or Nimhs into that would in turn hook up to where the battery pack goes now. My current batterypack is losing it, and I'd rather replace it with NiMhs that I can stick in there and easily replace myself than a factory sealed battery pack.
Anyone know of anything?

I had one for 2 weeks untill I returned it. It was a great radio and I returned it on account of my finding out that I needed more than 150 channels after all.
I got the 300 channel pro90 instead.

As far as performance and features are concerned the radios are about equal, except there are two things I liked on the pro-91 I miss on my pro-90.
The pro-91 allows you to use Alkaline or your own (NiCd or NiMh) batteries (way better than the stinkin' pack that
comes with the pro-90)

in addition the pro-91 has a ham band scan that the pro-90 does not have, which I found particularly usefull in hunting for skywarn hams when I did not have the local repeater list.

I'd recommend it.

1091. Re: Bill Cheek Update

Newsgroup: rec.radio.scanner
Date: 1999-10-14 00:00:00 UTC
From: Glenn <glenn.hansen@usa.net>
Message-ID: <%KtN3.434$W3.37500@news.uswest.net>
Source record: 104658

usmilealot <upupokok@email.msn.com> AKA Maynard AKA Bill Conduit wrote ...

> we had an understanding: we were the 3 percenters.

What nonsense Bill. This has NOTHING to do with a person's character.

> whereupon I discovered this: If Bill Cheek trusted you and
> said
> that to me or another 3 percenter, I trusted that person.

So what? It says nothing about character, ethics or morality. Convicts, criminals and druggies also have the same code? So what?

> There
> are about six or seven that fit that designation: good
> people.

How so? Say who? You? What do you define as "good people"?
Are good people rude, condescending, vulgar, arrogant to others and constantly argumentative to name a few?

> ...and Mack-stunk claims to be so much moah bettah den da
> Cheek-guy.

What is the purpose of "moah bettah den da"? Is that "good guy" talk? What is the purpose of that little out burst? Racial? Bigotted? Is that part of being a Cheek "good guy"?

> What has this louse ever done to help people on
> the net NG? Has this miscreant ever gone the extra mile
> with
> anyone to help them become aware of his "superior mind"
> full?

Quite telling there Bill. So you are saying Cheek went "the extra mile" to help others become aware of his "superior mind"? Yes, Bill did blow his own horn quite often. So is this part of the 3% good guy club? Do you think those that didn't go through the Cheek Years care? Do you thonk those that did are buying any of what you are pitching?

> that is the mark of a good man: he who helps and does not
> remind you of it...

.....but Bill would remind everyone else. Author, CEO, President, Crossing Guard blah, blah,blah. How many times did we hear it? Mesna? Toot Toot Toot goes Bill.

> he just enjoys being able to be of some
> help to get an anser for you.

At times it seemed that way or others when he did anything to embarass a newbie or to try and make somebody feel stupid because they didn't ask quite the Cheek way. So what?

> Where is this Mack-stunk when answers are given? Between
> his mama'a legs. That's the only place he can get
> help...but
> giving it, how?

Yep, you are what you worship. The little ditty above is what you call being a good guy. Those are the words of Bill Cheek flowing off your fingers Bill. You even mimic him. How cute little Bill.

>
> The people who slam Bill are themselves to be pitied.
>
> They are not members of the "3 percenters"....
>
> Cheek is a very funny fellah. You have to be a "3
> percenter"
> in order to know how to laugh with him and enjoy his
> mind-full.

Nonsense.

>
> bill was always there....to help. How many of you
qualify?
>
> And you denigrate him thusly. What makes you so low?
>
> Must be DNA...mama's to blame.

Has your name always been Bill or did you change it after seing Cheek on the NG?

> PS: why not just allow Bill his space now and quit this
> kicking him while he's down.

That is Cheek's style, why would a worshipper object to that style in others?

> he's not part of this
> NG any more. So accept it. Quit trying to make
> yourself look important by trying to bring
yourself
> down to the level of those like Mackeral and
others
> on the NG?

What is your excuse Billwannabe? Why are you so special and can preach about YOUR mighty god Bill Cheek but others can't disagree? Why did you pop up

under a different name and keep it going? If somebody made as simple of a mistake as asking about which resistor to cut rather than which diode or as stupid as to say you can't use a metal screwdriver as a tuning tool under certain circumstances Bill didn't hesitate to "denigrate" them "thusly". Why do you expect the other 97% to treat him differently? Go toot Bill's and his good friend/wannabe Bill horn in alt.fan.bill.cheek. Start an alt.3%.special NG.

My heart certainly goes out to Bill and his family in his battle with Cancer. I wouldn't wish that on ANYBODY, not even Loonet Toilet Boy or you. But to sit and hear you go on about the "good" god Bill Cheek really is halarious. Take a loan out on a reality check Maynard. Cheek by his own words is an "asshole". He is proud of it. Odd thing for a good guy to be proud of.

I remember once on a vehicle accident, a CHP officer trying to use his HT
to talk to dispatch. His reception was crappy to say the least. He
confirmed the extender WAS on. He went back to the car and used the main
radio. He then said he must have been too far away for the extender to
work... he had been about 50 feet away with no physical obstructions. My
guess is he had a bad battery in his HT and didn't realize it yet.

I think you're missing it wee-willy; Bill's writing has a no-BS and a "cut to the chase" quality that makes sense of technical procedures, he knows when to write in detail and almost more importantly, when *not* to go into great detail.

When I was building a decoding device for the base-band audio tap off of his plans (which he posted for free), he helped me out with answers to my newbie questions. I mean really dumb questions like (How do I tell which side of this capacitor is positive or negative). Bill really knows scanners and radios and provided me and others with a boatload of information on scanning.

But Bill is also a gifted writer and published author. Sure he's brash, but his writing has a consistent voice that you don't find in many posters....and yes, when he engaged in "tit-for-tat" contests on the NG, I found his writing to be amusing and well constructed. So what? It's just too bad that many people couldn't get past the lack of "politeness" in his posts to appreciate the writing skill that went into them. And this skill didn't have anything to do with "proper grammar" and avoiding profane terms. His skill comprises a mastery of syntax and tone while permeating text with a palpable voice. It's really impressive if you know what to look for.

And you know it too wee-willy.

You've adopted some of his writing devices in your posts over the years.

You just won't admit it.

1099. SWAP ScanCAT Dos for Win vers

Some years back I downloaded an article on the construction of a
crossed dipole antenna with reflectors, for the 137 MHZ band named
ZapperII.

I have no idea how to post it on the webpage in the .ZIP format, but
if this will work I suppose I could just make a seperate page of it.

Or if someone can explain how to just load the zip on the page...

Yes as a matter of fact, I have. The GRE Super amplifer sold through grove-ent.com is wonderful!!! Try to stay away from Radio Shack stuff, it's better to do it right the first time. This amp works beautifully! However, on a cheap model scanner it doesn't work all that well but if you have a high-end scanner you can amplify sounds you've never heard before! The literature states it amplifies 100mhz to 1ghz. However, I've been able to pick up frequencies much higher than this using this pre-amp.

"riotbomb" <wick_j@email.msn.com> wrote:

First you need to ground your antenna outside! Secondly it depends on what you want to listen to. Above 200mhz, I would use the Belden 9913. It's great cable, use silver connectors and seal the connectors outside. However, it's thick and expensive. It will cost about $.64/foot. It's over 1/4 of an inch thick and you can't bend it very much or you'll lose signal. Get the single copper strand. It has wonderful shielding too!!! This is for some SERIOUS listening and transmitting as well. Also, make sure you have a good antenna. Post if you have any more questions. This is the king of cable, unless you want to pay $3/foot for even thicker cable, it's like a "hardline."

Not as an off the shelf item. If you are a hacker and have some
free time (wat's dat?), you can use an older, cell capable, scanner
to follow trunked conversations using a Hamcom type interface
and some freeware:

http://www.lcblanton.com/digital.htm
http://www.comtronics.net/trunk.htm

This type of setup is VERY powerful and has many benefits over
the off the shelf type scanner. The disadvantage is it takes skill
and effort to build it and make it work (some of us call that fun),
and it isn't near as convenient as my BC245XLT!

Remember, no one scanner does everything well. This is why
so many of us have one of each. Well, not yet but I'm working
on it. Rich Wells has 'em all though. ;-)

Date: 1999-10-14 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <38055C93.2DF112CB@globe-net.net>
Source record: 104760

A local HAM repeater started using a PL tone a while back to try
to keep a licensed HAM operator (no kidding) from getting access to the
repeater and harassing the users. He still figured it out and eventually got
fined from the FCC (only $1500). This is the PCARS repeater in
Melbourne, FL. They had a great letter posted on their website for
months regarding this issue. The only problem with using tones is it is
so easy to decode them these days. The OS535 board in my PRO-2042
running Probe software does a nice job. ;-)

John,

I think you'll find they use an Astro Digital system up there.
I have family living up there and did a search for them a while
back. No way to decode the Astro system yet. :-(

Why are you no longer interested in the 3000A? I have a Shack 2004, but have always wanted the 3000A. It would be used mostly for 800 and 900 mhz. What can you tell me about your experiences (pro/con) with the 3000A and what at this point would you select as your personal choice as an excellent base unit?

Look for Spread Spectrum on the phone box or literature. That is
digital, and untrackable on the current group of scanners. You can
find them in the $50 range right now. Just saw one at Best Buy.

FA: Unbelievable UHF Saber III Secure Wideband Package!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

A chance to get everything you need in one shot!

This package includes all of the following:

- Saber III H44QXK7139CN with the impossible to find 450-501 mhz split, in near mint condition, includes full keypad/LCD/secure capability;

- Almost new battery, excellent condition;

- Stubby UHF antenna;

- Rapid charger, as new condition;

- Saber III Enhanced convertacom, with display mike, amplified speaker and all wiring and brackets (good condition);

- RIB box with Saber programming cable (will even include a 386 computer with all you need to program, if you want);

- leather case; and

- extra whip antenna.

This is a once-in-a-lifetime chance to buy everything you've ever needed!

Take advantage of my retirement from the EMS business!

Covers FRS, public safety bands and will even cover all those new NYPD frequencies in the 482 mhz range!

Visit: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

Sent via Deja.com http://www.deja.com/

From: Air Boss <larry@grove-ent.com>
Message-ID: <3805e7b6.0@news4.his.com>
Source record: 104774

Hello Chuck and the group,

The problem with EDACS trunking isn't so much the 245 as it is the demands of rception of EDACS trunking control channel. EDACS trunking requires completely clear reception of the control channel at ALL times (unlike MOT). EDACS systems tend to have a smaller usable area of reception than a MOT or LTR system. Thems the cards we are dealt I'm afraid. And no the Pro-92 will not improve on this at all. The same situation exist there. I have just spent about 6 hours with the Pro-92 and it will suffer the same problem as the BC-245 in tracking EDACS systems.

Have a great day all,

Larry Van Horn, N5FPW

We have received about a dozens reports here in the MT office of seizures so enforcement by Customs seems to be spotty (no real pattern geographically except stuff going through Chicago and New York). Personally it is to much of a crap shoot for me to waste money on something I may or may not receive and be out the money if it is seized (I just don't feel luckey these days). There is also the issue of having to send it back out of country to be repaired if something goes haywire and then getting back in again.

IMHO-I just can't be hassled by all that junk over the stupid cell band that is going digital anyway.

Have fun out there,

Larry

Quit advertising it as "mint" for one thing.

Mint means factory condition, unmodified, practically un-used.

When you buy a car should the dealer give you a complete set of motor vehicle code books? Why single out scanners?

I have encountered a couple of programs that specify discriminator output to be routed to the sound card's line in port. My discriminator tap goes to a serial port.

What, if anything, should I change on my discriminator connection before plugging it into my sound card? Add or subtract capacitors or anything like that?

1st IF is 257.5 MHz. 2nd is 21.4 MHz and VCO3 runs from 236-229 MHz. Restoring the 200 MHz band would be a futile exercise.

You could add discriminator output, a carrier detect light and more memory.

Discriminator out can be found on pin 9 of IC 301.

The carrier detect can be picked off the Mute or Squelch line.

Could piggy-backing a second memory chip and switching the CE line add another 200 channels?

Paul

I am looking for a way to get the bearcat 80xlt that I have to pick up the frequency ranges that it has blocked out: 54-137 mhz, 174-406 mhz, 512-806 mhz.

Does anyone know how I could do this? Are there any legal aspects involved with this?

Paul, the capacitor is used for coupling and its size should not present a problem for the discriminator output as long as the data slicer and sound card have high input impedance, 100 K Ohms or more. To get good low frequency response, the cap should be large and I use 1uF with my data slicer without problem. To be sure that possible dc bias from one device does not get routed to another circuit, capacitively couple both the data slicer and sound card individually. 1uf or more should be fine. I can't see the need for a buffer unless the sound card has unusually low input impedance.

>> So my only question now is... what happens when 2 or more extenders
>> are active in close proximity? Or do they try not to do this?

When an extender (vehicular repeater) is first turned on, it sends out a specific burst tone. Another unit nearby that is already turned on will hear this and automatically place itself into standby mode.

Should this second-to-arrive extender leave the scene, then, when an officer keys his HT, the extender that is left on scene in standby will listen to see if the extender (that left) keys the mobile radio. If it doesn't hear the mobile radio TX come up, then it will turn itself back into active duty as the extender for the scene.

Thanks to both of you (so far). I think what I will do is, when I tap the
next scanner, I'll provide just a straight line out to a jack on the scanner
itself. Then I can plug in either the dataslicer or the sound cable without
any worries about impedance mismatches or other issues.

1160. Ham Radio and SWL URL

Hello,

Check out http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

1165. Re: Do Red Cross Repeaters use PL tones?

Newsgroup: rec.radio.scanner
Date: 1999-10-15 00:00:00 UTC
From: jamulter@aol.com
Message-ID: <19991015090124.06861.00000382@ng-fe1.aol.com>
Source record: 104690

I do not know if 47.42 is used nationally, but in the southeast U.S., the American Red Cross uses it for coordination of Disaster Services ... with carrier squelch. The locations listed in the FCC records are usually Region centers.

Locally (Charlotte, N.C.), the ARC offers some special transportation services for handicapped and elderly people. They use 47.66 / carrier squelch for dispatching.

Where you live, and the activities of the local ARC chapters and region, will determine what frequencies and P-L tones may be in use. Many of the people involved with the ARC are unpaid volunteers, and amateur radio is a valuable asset to the Red Cross.

One local chapter is heavily involved in providing canteen assistance to emergency personal at fire and EMS situations. They have their own licensed channels in the high band fire and safety allocations.

If you are an ARC employee or volunteer, you can request authorization from your supervisor to access the ARC "internal" web site. This site, which requires a password and username, has a forum area where you might post your ARC question and get a more-specific response. The internal site is also excellent for keeping up with changes in the ARC.

CTCSS - Continuous Tone Coded Squelch. Radios use a subaudible tone for selective squelch opening. Think of it as a whole bunch of people outside Yankee Stadium, but only the ones with tickets are getting in. When listening to a regular scanner, you hear alot of interference, correct? With CTCSS, you hear only the traffic with the subaudible tone knocking out all unwanted traffic.

Hello All: Need the frequencies for the Kern County Fire & Sheriff, and where would you find these frequencies in a book, or CD?

Greatly appreciate any help, and thanks.

Jay in the Mojave

1175. GP9-NC COMET ANTENNA QUESTION

Newsgroup: rec.radio.scanner
Date: 1999-10-15 00:00:00 UTC
From: moa1213@aol.com
Message-ID: <19991015135949.03264.00000010@ng-fv1.aol.com>
Source record: 104700

Hello list,

I recently placed an order for a GP9-NC antenna which covers the 153-157 band
with 8.5dBi gain at 5/8 wave x3
and 460-470 with 11.9 dBi gain at 5/8 wave x8.

This antenna is 17'8" tall. Will I have a problem with lightning and the house
getting struck if the base of the antenna is about 28' off the ground?

Does anyone have this antenna for scanning? What king of luck have you had
with it?

Please let me know,
Thanks
MOA1213@aol.com

1176. Re: GP9-NC COMET ANTENNA QUESTION

Newsgroup: rec.radio.scanner

From: Charley Harp <charp@htonline.com>
Message-ID: <s0es207ur0138@corp.supernews.com>
Source record: 104701

Using this antenna at 28' is not really any different from having a TV antenna at the same height. If the shield of the coax is well grounded (as it should be) your antenna will actually help protect your house from lightening. Good practice when practical, however, is to disconnect the coax during periods of possible lightening and ground both sides of the coax. BTW, good lightening rods work not by attracting lightening, but by neutralizing static charge in the area of your house, making your house a less attractive target.

Good listening!
Charley_Harp@alum.calberkeley.org

So far profanity, vulgarity and nonsense. Some facts from you would be a refreshing change. All you seem to do is say "3 percent" and Cheek did more than Mackey. Who cares? It still doesn't mean Cheek didn't behave like an "asshole" and those are HIS words.

> if you cannot read the
> Cheek guy, then enjoy the mack-stunk. he is with you in
> your contrived misery you are crying about: self-contrived.

I don't enjoy reading either of them. You seem to be the guy in misery. You are the miserable 3 percent! Rude and vulagar and proud of it.

Utter nonsense. There is no reason to blast a newbie unless they are rude or vulgar. Not knowing the correct pharse or politically correct word is not license to try and run a newbie off the group.

> he saw their idiocy coming as most of us do and refused
> to deal with it, to be set up. I see it and call them and

Then sit down and shut up. All you have been doing is trying to speak for and act like Cheek.

Your Mr. Cheek probably did as much damage to the hobby of scanning over the years as he did good. That is certainly true in the case of Fido and R.R.S. No taking away that Cheek knows scanners but beyond that he only cares about Bill and his ego. It also is interesting that a 3 percenter that is so above the rest of us wasn't bright enough to stay out of a divorce, has no equity in home or business and is now is in need of money. Tell me again how brilliant he is Bill? Why is the smartest of the smartest in the spot he is in? Talk is cheap and those that say they are something usually aren't really anything at all. That only accounts for about 3 percent of this newsgroup though.

1182. Shades of Orson Welles

Thursday night, 10/14/99, my son had to go down to my basement office to use my computer to do his homework. Also in my office I have a Radio Shack Pro -2066 trunk tracking scanner. While he was doing his homework on the word processor, I thought it would be a good time to review the search trunking IDs and look for more IDs for our community police department.

As I was searching, I came across a very interesting ID, 20816. We first heard, "Popping smoke!" and "Gunfire at north entrance!" then we heard, "Shots fired at the south door!" and "We have a hostage situation!" Then my wife yelled at us to come upstairs for supper.

After supper, we continued listening to 20816. Of course it wasn't too easy for my son to complete his homework. "One suspect at door wearing a white shirt and blue jeans has a shotgun!" blared over my speaker. My son finished his homework, but wanted to stay and listen. There were several squads, probably 10 or 12 and "CP." "CP" was continually on the air. I assumed CP meant Command Post.

My son wanted to continue listening. I said, "No, you go upstairs and see if Mom saw any news on TV." She didn't hear anything. I continued to listen. Transmissions were coming so fast, I used the word processor to try to keep up. Writing by hand was too slow. What I was able to write on the word processor:
"The auditorium is on the west side of the building!"
"Could you get me some M-16s here. I think they'd be more appropriate!"
"Could you get a negotiator here?"
"There's a body laying at the door where the phone is going in!"
"2 dead and 1 seriously injured!"
"We're forming assault teams now!"
"There's a suspect yelling from the west window, 'Get me out of here!'"

You have to remember, I'm trying to get this all down. There's all these squads contacting CP and CP contacting all these different squads. I don't know which department it was, but I sure tried to listen and find out.

I listened further:
"They're not answering the phone. I can hear a woman screaming, 'Don't shoot! Don't shoot!'"
"Dispatch a paramedic. 1 has a gunshot in the abdomen, 1 gunshot in the ?????"
"We're forming teams now!"

I looked at my watch. I was listening now for over an hour now, closer to over an hour and a half!

"Advises notify with a cell phone. Lock out the auditorium and west side!"
"Doors on west side that were open are now closed!"
"Milwaukee paramedic on the scene!"

AHA!!! MILWAUKEE!!! Maybe it's Milwaukee police swat team?? I went on the internet and accessed the Radio Shack trunk scanner web site to find out who 20816 was. It said,"Speed Trap." Yeah Sure!! With conversation like that! I--D-O-N-'-T--T-H-I-N-K--S-O!!!!

The scanner continued:
"No communication whatsoever now!"
"Multiple automatic fire inside building. We're going to have to move!"

"A lot of screaming coming from inside the building!"

Then came the culmination of the transmissions.

"Captain, if you need more simulated bodies...."

Un hunh! That's why my wife didn't hear anything on he news! THIS WAS JUST A 2 HOUR PRACTICE DRILL!!! Milwaukee swat team?? I then thought of the original Orson Welles broadcast of "War of the Worlds." Many people didn't hear the beginning where it was announced that this was just a dramatization. Nor, did they hear during the radio broadcast. Many people really believed that they were being invaded by Mars and took their lives.

Have any of you come across this type of broadcast on your scanners? It still makes for interesting listening.

I am an Airborne Reporter and I just use a plain old BC245 (if you can call it that). It does everything I need it to and works great in the air. I am probably going to start using the Pro-92 when it comes out because the CTCSS and alpha tagging would be helpful. I haven't seen the yello radio you're referring to but I'd like to find out what that's all about.

As far as monitoring aviation freq's, I can use the scanner but I usually just use the radio in the aircraft.

FA: Unbelievable UHF Saber III Secure Wideband Package!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

A chance to get everything you need in one shot!

This package includes all of the following:

- Saber III H44QXK7139CN with the impossible to find 450-501 mhz split, in near mint condition, includes full keypad/LCD/secure capability;

- Almost new battery, excellent condition;

- Stubby UHF antenna;

- Rapid charger, as new condition;

- Saber III Enhanced convertacom, with display mike, amplified speaker and all wiring and brackets (good condition);

- RIB box with Saber programming cable (will even include a 386 computer with all you need to program, if you want);

- leather case; and

- extra whip antenna.

This is a once-in-a-lifetime chance to buy everything you've ever needed!

Take advantage of my retirement from the EMS business!

Covers FRS, public safety bands and will even cover all those new NYPD frequencies in the 482 mhz range!

Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.cb,alt.radio.scanner,rec.radio.amateur.swap

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

All I ever got from BC was a ration of crap and a threat to sue, if not to perform bodily injury.
He shut up as quickly as a clam in hot water when I let it be known that I was associated with
my local police department (volunteer in Burg and Pawn detail)....

However,

I would not wish what he is going through on anyone, regardless of their personality. We lost my wife's
stepfather to cancer two years ago, and it isn't a pretty sight, let me tell you. Let's let him pass his remaining
time in peace; we will follow him in due course.

PAX, R.I.P. Bill.

John, Take it to your newsgroup, alt.fan.john.mackey

BTW, I have held an amateur radio license longer than you have. It takes very little knowledge to pass the tests all one has to do is memorize the answers. All the questions and answers are published by many sources. Now if you had any education we might be impressed but all we hear from you is your stupid licenses. Remember when you said you had over five of them? You are a habitual liar Toilet Boy....give it up.

Was Bill re-instated by the nmailing lists he was removed from?I have NEVER been removed from ANY Fido echo during time of activity
on the Fidonet system, except for the one BC did to take revenge on me.

> This is a lie. You have been banned from HAM-SALE at the same time.

WRONG, I was NOT banned from "HAM-SALE" during my time of activity onfidonet.

It curriently is not possable to scan digital radio systems of any
kind. There is no scanner built that will understand the digital
modulation. There are rumors that the are going to be banned in the
United States, and in Canada anybody who wants to use a digital
scanner will have to get a licence from the Canadian gov't

Listen to the frequencies and be sure it's really digital. If you're going by a newspaper report or even so of the "stuff" put out by the companies you may find that the only digital part is the control channel, the voice stuff may be analog. Just a thought...

HAMFEST October 24, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 24, 1999

LINDENHURST, LI - NY

On October 24, 1999 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

E-mail GSBARC info@gsbarc.org or visit GSBARC online at

I'd like to know if anyone modified the Radio Shack amplified mobile
speaker
(cat.#21-541) so it stays on all the time instead of powering up when
it senses input signal? I figure a resistor or cap change should do
it but I'm not an electronics guru.
Thanks.

Isn't this typical of John Mackey. Will your lies and deceptions ever end Mackey. God you must be the sickest puppy in the world. You choice of coax shows your total lack of scanning receiver knowledge which proves you merely memorized the answers to pass your FCC tests. Read the rest of the replies in this thread John-Bowl. NOBODY in his right mind would follow your stupid recommendation. Michael didn't support you and telling a lie doesn't make it true.

An idea that is form an old Popular Electronics.
I do not know hwere I refound this idea, I had forgoten about the
orignal article until someone jostled the memory.

Back in the mid 1960s the FCC allowed part 15 "walkie-talkies" to operate in the same 27MHz band as "Real" CB. 100mW max input power, a self contained antenna much like todays FRS. The FCC overlooked a simple way to boast the range back then. Put a 100mW HT up on your roof, build it into the antenna and run the power, rec af, tx af and PTT back down into the house. About the time I was ready to try this back then I got my ham ticket and lost interest in part 15 comms.
But after getting my memory jogged, I pointed out to a friend who would like to talk about 5 miles to his brother that he might want to try doing the same thing with a FRS. He and his brother first tried it byt just going up on their (respective) roofs (they coordinated the test with regular telephones). It worked like a dream. So they went and bought some el cheapo FRS (a local close out store had some GE units with VOX for $50 a pair), got some tupper ware containers and put them up on the roof. FRS rules disallow this type of thing so YMMV. They have progressed to the point where they built a coupl of simple 70cM yaggis and conected the FRS radio to the antennas. They have rock solid communication and are now looking to tie a set of 49MHz VOX headset "HT"s into the roof mounted units so they can jabber while working around their respective farms. If you couple the 49MHZ units to a decent vertical dipole or ground plan you can easiy get 1/4 to 1/2 mile range in bad conditions. Their activity is not strickly legal, but they live in the middle of nowhere and I can not see their operations causing anyone else any problems. Again its your life, your money and time, I guess you could go to jail for this type stuff, so do what you will. As the old tv cop show sai "don't do the crime if you can't do the time".

The ever so slight input audio turns on a transistor switch that "Wakes"
up the rest fo the ampilfier. I had one of these but sold it some time
back.
I do not remember if they supplied a diagram with it. IF so, just trace
out the power suplly line and find that tansistor and put a switch in
parallel with it(if you want to be able to revert to normal operation),
or just put a jumper accross the transistor if you really want it on
"all the time".
If they do not supply a diagram, open the unit up, and trace the power
circuit out. Looking for a transitor in series with (I think) the
positive lead. One lead of the transistor will go back to the auido
input. If you are uncomfortable poking around inside your unit, ask
around, you should be able to find some kind soul locally who will be
willing to help. As a last resort, call around to your local 2way shops
and expalin what you need and ask how huch.
Good luck

Date: 1999-10-18 00:00:00 UTC
From: breda@hom.net
Message-ID: <380B1412.DA4F06C@hom.net>
Source record: 104618

Hey all SWListeners

I was tuning between 5.5 and 6 megs and noticed what seemed to be a SSB

signal. The signal listened in all modes tried had an annoying
encrypted whining sound to it.
I switched between USB, LSB, RTTY, CW and FM modes with no favorable
results. I am extremely curious as to who and what they are
transmitting.
It must be interesting/secret or it would be in a more conventional
mode.

These signals defenately do not sound like any digital data transmission

Ive heard, they appere to be voice with some sort of encrytpion applied.

Does anyone know what these transmission are? What special type of
receiver mode is required to hear in the clear.

Thanks in advance for any informative response.

Bill (KD6CZU)

1234. Re: RS' Amplified speaker: power-on all the time?

Well, I shorted all three leads together of the transistor "Q5" and it seems to be working fine for the past 5 minutes. The heat sink is getting ever so slightly warm when blasting pure open squelch for 2 minutes...I thought maybe it or something else would overheat but nothing's happened so far. I guess I got the right transistor.

Sure -- the problem is that you will hear all voice transmissions as digital screeching. You can see the trunkgroup ID's pop up on your TT (if it's a Motorola system) but that won't do you much good.

I just got My Grove catalog today and saw that they now have a
compact a ICOM R2 continuous 485 kHz-1300 MHz frequency coverage.
for just $199.95 Has anyone use this scanner or any ICOM scanner ?
if so how good is it and how good ICOM scanners?
as I'm looking for an good lowcost full coverage scanner for travel.

Thanks
Dale

I agree with John.
It is just that a transmitter would see the mismatch and have to dissipate
the higher power levels some place other than the feed-line and antenna.
A receiver would only have smaller amounts but still have to deal with less
signal due to the SWR mismatch.
Technically you John are absolutely right.
BC and the Cheek-A-Likes will never agree or admit error on these matters.
Rick

No John-Bowl, Rick didn't agree to your recommendation he agreed that receivers suffer from mismatch. Yes receiver mismatch exists. There is no reason though to worry about it when we are speaking the differnce between 75 and 50 Ohm coax. You recommendation of using 213 is a poor recommendation for wideband scanning. Get over it John-Bowl.

BTW, you hotmail personalities don't impress me. Is this another imaginary friend? The tell tale signs are there John-Bowl.

I' ve had mine for half a year, and This is what got me interested in Amateur Radio. I did not know there was anything under 400Mhz (I was new at this) I bought it just to listen in on my local Public Service Trunked radio system. I heard diffrent repeaters (2 meters, and 440) and I thought amateur radio was great. So i got my liscence and my HT, ADI's AT-600. and the day I got my HT I havent used my pro-91 since. So I'm thinking about selling it. Besides, I cant understand what the police are saying anyway, and my HT does conventional scanning in those freq. If I had an HT that does Trunktracking, I would sell the Pro-91 immediately. but since I don't Im kinda hanging on to it for now. But otherwise, its a good radio, BUT the only thing I had a problem with was that with my rechargable Alkaline batterys, This scanner will suck my batterys dry in about a day! I cant understand why this scanner sucks so much energy and it doesnt even transmit, exept for spurious frequencys.

Big one!!! :-) I thought I had cleared it up. Don't read what I said
understand what I mean. I mispoke myself big time in the first statement. I
really was trying to say it doesn't matter and people don't normally check
the impeadance of a antenna for receiveng.

(snip)

> A scanning receiver operates accross a much much broader range and no
antenna

Rick you are right I think I am confusing it with the grace period for renewal. I remember I missed the window by months! Weren't they five years? Hey, it's fun watching John dance like a organ grinders monkey screaming what a GREAT HAM he is and how much he knows. As you know, the class of license says very little about the type of person the ham is or the knowledge he posesses. With the publication of the FCC tests anybody can pass the tests if they spend a little time memorizing the license guides..

The RED CROSS does not normally use repeaters, although they may
operate some HAM repeaters. They are normally low band, and depending
on the age of the equipment, may or may not have PL.

They are licensed on 220, nationwide, but have not released the
equipment. Most likely never will.

Although it is 75 Ohm, it just won't make a difference in the scanner.

75 will work just fine.

I have to disagree for the most part about Glenn. Both of us
realize that Bill had a number of failings, and we both agree
that John Mackey is, well, to say the least, a total moron.

Nothing he has said puts him in the same group as Willi.

Len,

Great minds think alike. Been down that same road. I've gutted
several "Lime Lights" and tried various mods. It is easy to cut
the material to different shapes and as long as you leave the original
contacts in place, it still functions as before. The problem is the
2004 has such a large display that even two Lime Light panels
aren't wide enough to fit. Also, it get a little dangerous routing
the foil power connections around all the exposed pins on the LCD.

I've even found a company that sells EL panels with different color
lenses. The only problem is the panel is only 3.75" long and the
2004 panel is close to 4". I've contacted them about possibly having
a larger panel available but they never responded. :-(It would
have been easy to add this as it operated from 2 AA batteries and
had its own oscillator circuit (heck of a deal for $20). Considering the
power consumption, it probably would have worked fine directly
from the 5V reg. in the scanner.

I've read a report that Bill Cheek had found a source for large
enough EL panels for the 2004 and he recently published the article in
his newsletter, The World Scanner Report. I don't have a subscription
so I don't know of the source (yet), but there obviously is one. Might
be worth buying the issue just for that article.

Anyone know of another source for W I D E ELs?

Robert

Look again at what you wrote above ....

>> There is no such thing as a 50 ohm match
>> for receiving. It is rare looking from the receiver end and pointless to try
>> and achieve it. Poor advise to say the least.

Then look just above at what you wrote in same message ... a contradiction.

You guys are kinda comparing apples and oranges ... or maybe walnuts and almonds in this case. Yes there are mismatches when you move off the optimum frequency of the antenna. In the case of transmitters, one generally finds them operating on one or perhaps more frequencies in general proximity to the resonant antenna in a 50 ohm match. In worst case, there might be a broadband Tx operating in an entire band, such as 150 - 174 MHz into a broadband antenna with a close match accross this range around 50 ohms.

A scanning receiver operates accross a much much broader range and no antenna can possibly offer a good 50 ohm match, a good 75 ohm match , or whatever accross this entire range. This means whether you're using 50 ohm or 70 ohm coax doesn't really matter in the broad sense because both are going to have mismatches from optimum impedance most of the time.

I was so impressed with the ICOM IC-R2 after
testing one for Monitoring Times, that I bought one for myself.

There are a few drawbacks, i.e., slow scan rate,
cannot scan combinations of multiple banks,
and no numeric keypad, but it's a favorite.

I carry it with me more places than any other scanner due to
its small size and good performance. It takes 2 AA batteries
so it's very easy to power.

Anyone have an older license manual?

My XYL got _her_ novice ticket in 1980 (at my urging), and as I
recall it was _not_ a ten year license. My own first call (N7AVF) was
around 1977 or 1978 and I don't recall that one being a ten year license
either (or my second one, KD6PV, issued in 1980 or 1981, for that
matter). The first ten year ticket I remember receiving was my current
KE8HH, issued in 1986 after I moved to Michigan from San Francisco in
1985 and renewed in 1996, as was my XYL's current call (KB8AGW).

I could be very wrong about the license durations, of course,
but I was pretty sure that the 1986 issues were the first ones either of
us received with a 10 year term.

Chuckle. I have no desire for the added capabilities of a higher HAM
ticket, and insofar as the "higher level commercial radio test" I have
the same commercial ticket that you claim to have. I have never
doubted that you have that ticket, as the test is so simple even you
can pass it.

Tandy, last time I checked, still had the backlight panels for the
2005/2006(it's the same panel) available.
Of course, they have been out of the ones for the 2004 for quite a while
now.

1285. WTB: Phone Patch

Newsgroup: rec.radio.scanner

I doubt that any agency would spend millions on a digital trunked system
only to have its security plundered by a $300 consumer scanner. The likely
situation will see a total ban on the manufacture of such scanners capable
of decrypting a digital system.
Any user of the system with sensitive traffic will opt for heavy encryption
schemes should they be affordable.

Still, does not stop persons with ingenuity from experimenting, as seen with
the development of trunker.exe (love this software!) and the other such
programs!

Have fun trying anyway!

Why on earth buy one.
They are very simple (unless you want full automatic operation).
Do a net search or go to some of the ham radio sites...I have given up trying
to post ascii diagrams..even I can not read what I have "created"!

Glad to offer some usefull advice.
Just because I am as nosey as a cat, why did you want to turn it on "all the
time"? If I remember correctly it gated fast enough to not be a problem even
on fairly fast PD comms.

1293. Re: Digital Trunked Radio

Newsgroup: rec.radio.scanner
Date: 1999-10-19 00:00:00 UTC
From: Andreas Mueller <amueller@us.pepperl-fuchs.com>
Message-ID: <4E_O3.22$_E1.1187@client>
Source record: 104565
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Many of the systems are not implemented for the purposes of security. In fact the digital signals are not always encrypted. Many of the existing digital radio systems are similar to CDs... they are digital, but not "encrypted" for security. The problem, as I understand it from reading the newsgroups is that different companies take different approaches to encoding (note this is not encrypting) the analog into digital. I know personally I would be happy if they came out with a digital trunk-trakcer so I could listen to the Cleveland, Ohio police on their Motorola Astro System.

But oh well.
I did not know that a trunk tracker radio could follow and display talkgroups of a digital signal.. is this true? If so... I wonder why none has written a program to decode the squeals into voice.

Hey folks, stupid quesiton here. I looked at the info on the Pro-92 coming out, but I did not understand the bit about the alpha tagging properly. The info on StrongSignals suggests that the radio will alphatag trunked channels, but can conventional channels be alphatagged also? I'm probably being silly, but I just was not sure from the description. If anyone knows, please let me know. I can't wait 2 get my hands on one of those, well.. I'll wait till the first sale maybe :)
Thanks in advance for any help

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I'd like to take this opportunity to thank all the regulars who respond to this newsgroup. I have asked many questions in rec.radio.scanner and alt.radio.scanner, and without fail I have reciecved good responses. In addition, I have gotten many great tips and spent hours reading some interesting conversations. My special thanks go out to some of the more regular posters of very high quality info like Rich Wells of StrongSignals, and Rob Parnass, and even ScannerDweeb for his comedic contributions :)

While there are occasionally "disagreements" in these groups, overall you all have worked to build a great community. Thanks, I'm glad to be able to be a part of it all.

1307. Motorola HT800 question.

Newsgroup: rec.radio.scanner
Date: 1999-10-19 00:00:00 UTC
From: Derek Brice <derek@garden-of-england.NOSPAM.co.uk>
Message-ID: <7uia72$ru5$1@news4.svr.pol.co.uk>
Source record: 104579

Could someone please tell me once and for all if there are
TWO versions of the Motorola HT800 programmer software.
Someone told me that there is a hidden serial number in
the transceiver that can only be read with one type of software.
As I purchased my two radios at a junk sale, I am a bit worried
about not knowing their origin, as the previous owner also got
them second hand.
My software reveals the settings, but no mention of any previous
owners I.D.

sounds to me like it is a commercial AM signal and you are in SSB, this will give you a whine with the signal, try USB mode.

Message-ID: <380dd534.256896528@news.uia.net>
Source record: 104584

I drove down to O.C. today and noticed that there is still a lot of activity on the OCSD 460 MHz freq's. I thought these channels were abandoned for the new OCSD Astro digital system.

I also still hear quite a bit of activity on the old County Fire Motorola type I system.

My question is, what is going on with these freq's/systems? Are they still in a cut over phase or are some of them still being used on a continuing basis??

That's often due to the failure of the audio output
capacitor. It's an electrolytic capacitor in series
with the audio amplifier output and speaker.

They don't last forever and I've replaced them in several scanners.

It's not that fast....or at least the two I have aren't. 70% of the time it works fine but the other times it'll take a good Tx-ID blast to flip it on. I don't know if I just happen to have two bad ones or what. I wanted to have a switch installed on it so I can flip it off, not actually having it on _all_ the time. I'd still like to get a schematic off this beast. Overall it is a decent setup.

From my FAQ 'SCANNER RADIO REVIEW BRIEFS:'

[...]

WHAMO-10: Regency's first synthesized scanner. Appearance
more like a crystal scanner, with a single LED per channel.
User has to break off teeth on a metal 'comb' for each
channel according to a code book. See US patent 4,057,760,
granted 11/8/77. External frequency control unit DFS-5K
optional. UHF VCO reference oscillator drifts on some units.
Soldered sheet metal shields around some circuitry make
access to some components difficult for servicing. Comb
sockets prone to bad connections after moderate use. Not
recommended due to maintenance difficulties.

1320. BC245XLT ID Birdies?

Newsgroup: rec.radio.scanner
Date: 1999-10-19 00:00:00 UTC
From: "David M. Hitchner" <nospam@trash.net>
Message-ID: <7uj6bs$8e4$1@bgtnsc01.worldnet.att.net>
Source record: 104592

I just got my BC245XLT and I am impressed with it so far.
I have used a BC235XLT now for quite some time so I'm
fairly familiar with trunked operation.

While monitoring the state system, I have noticed a strange
thing while searching in trunked mode. The ID 46976 shows
up on the display and locks on as if something is constantly
using that ID. Locking out that ID is the only way to continue
searching for IDs. It acts like a birdie only this is with an ID.

This never occurred on my BC235XLT. I also tried monitoring
the system using Trunker while this happened. The ID never
showed up using Trunker.

Any ideas on this or has anyone seen this happen?

I agree with John.
It is just that a transmitter would see the mismatch and have to dissipate
the higher power levels some place other than the feed-line and antenna.
A receiver would only have smaller amounts but still have to deal with less
signal due to the SWR mismatch.
Technically you John are absolutely right.
BC and the Cheek-A-Likes will never agree or admit error on these matters.

What model number is the Plectron receiver?
All the solid state base models can be powered by 12 VDC, too.

As with other mobile equipment, make sure the DC power
cord is fused as close to the battery as possible.

The only advice I would give a prospective PCR-1000 owner would be to just be aware of it's limitations. Don't go into an ownership situation expecting it to perform like a "true" communications receiver and view it more like a communications receiver on "training wheels" for computer control. This would also apply to the WinRadio product as well. They are probably worth the price that is typically asked but they are not "top" performers as compared to what is available on the market.

I have one Icom IC-R100 Communications Receiver forsale. This is a Scanner plus a Shortwave Radio. It is in good condition and had been installed in the dash of a Toyota 4-Runner. Owned by non-smoker.

Wideband frequency coverage 0.5 - 1800 MHz continously with FM, AM and Wide FM modes.
Multiple scan functions including auto memory write scan.
24-hour clock system with muliple timer functions.
A variety of tuning steps corresponding to any operating band. 1k, 5k, 8k, 9k, 10k, 12.5k, 20k, 25k.
800 MHz band NOT Blocked.

Comes with: Mounting bracket, CP-11 12volt cigarette lighter cable with noise filter plug, original operator manual.

Asking $550.00, you pay shipping

1335. Price for PRO-92

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: sascheffey@aol.com
Message-ID: <19991020183424.19507.00000224@ng-fd1.aol.com>
Source record: 104406

What is the expected price for this model. Anyone have the inside skinny, if there will be a good sale for Christmas too?

1336. FA: BC9000xlt

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: Russell Ryan <RussRyan@primenet.com>
Message-ID: <380E41BD.B9230D16@primenet.com>
Source record: 104407

Hey
I have decided to auction off my B9000xlt also, I'm in the market for a new Pro-92. It is a little older than the BC895 I am selling (its about 1 1/2 yrs old).

If interested check out:

1339. FS ICOM Q7A

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: Tom Seabury <tseabury@value.net>
Message-ID: <380E4DFE.90E8609A@value.net>
Source record: 104410

I have a near mint IC Q7A for sale.
Standard un-modified unit I've used very little. Bought from HRO about 6 months agofor about $199.00
Will sell for $150.00. Will ship COD in the US.
Have the adapter RS232 kludge (home made- but works) for a
PC that I'll throw in.
I will also throw in an earphone with the weird ICOM plug that fits the Radio.
It has the wall charger and two NiCad AA cells (600Mah)
Let me know.
Tom Seabury

1340. Need Help with Freq's

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: Bill <billhoward1@home.com>
Message-ID: <380E5106.84F86842@home.com>
Source record: 104411

Hello:

I need help finding some freqencies online. Can't find a really good place to look through a database.. I need a Bus company freq in NJ and a taxi company.. Here is the info, maybe you have it, if not, please tell me where to look.

Suburban Transit in New Brunswick NJ, or any NJ garage.

Kellys cabs in South River..

Thanks for the help, and if you could please e-mail me that would be great..

All the best
Bill

FYI
The Red Cross does NOT operate "HAM" repeaters!

HAM's operate ham repeaters when the Red Cross asks them to. Red Cross employees or volunteers who are HAMS operate the HAM repeaters.

The Red Cross has a national understanding with the American Radio Relay League (ARRL) that says (very briefly) HAMS will help the Red Cross when that help is needed.

1345. WTB Pro-2006

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: David Anderson <nolimit3o3@hotmail.com>
Message-ID: <380E5FB3.AB68E0E3@hotmail.com>
Source record: 104416

Well i knew it would happen, my gf decided she wanted to clean my radio/computer room and somehow in the process killed my 2006. Im looking for another, obviously, the case doesnt have to be in great condition seeing as how i have a brand new one i recently purchased for mine to give it a face lift. I would prefer to purchase one that hasnt been mod'd to hell and back, cellular and speedup mods are ok, but i would prefer one w/o any, or too many. But im not gonna be real picky here seeing as how it took me 4 years to find my last one after i sold my origional (dumb idea). If you have one for sale please email me at:

nolimit3o3@hotmail.com

I am also looking for the OS456 board, if anyone has one for sale (doubt that too).

Thanks in advance,
David

1348. FS: AOR 8200 $500

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: Mark Carey <mcarey@columbus.rr.com>
Message-ID: <7ytP3.19831$CV1.640085@viper>
Source record: 104419

Hello,
I have a barely used AOR 8200B scanner. This is one of the high end multi-mode (USB/LSB/SSB/FM/N-NF/AM) scanners from AOR. It has some really great features. For full specifications, check out the link below.

http://www.aorusa.com/ar8200.html

I am looking to sell this quickly, so please make an offer. Buyer pays shipping COD or pre-pay. I hate to part with the unit, but we're buying a house and need all the money we can get. I paid quite a bit more than this for it and am selling it at a loss.

Thanks,
Mark Carey

1349. FS: StarTek ATH-50 Frequency Counter $260

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: Mark Carey <mcarey@columbus.rr.com>
Message-ID: <kAtP3.19834$CV1.640078@viper>
Source record: 104420

I have for sale a Startek ATH-50 Frequency Counter. It comes with the telescoping Ariel from Startek. It is an excellent frequency counter and is barely used. (Four times perhaps.) I am selling it to raise funding for a house, so it must go. Any reasonable offer will be accepted. Terms: Buyer pays shipping COD or pre-pays.

The ATH-50 has a range of 5Hz to 50 MHz and also 10 MHz to 2.8 GHz. The unit comes with Auto Triger and Hold mode. It also has three capture speeds ranging from 2.62 seconds to 0.08 seconds. The unit also comes with an internal NiCad battery and charger. The full manual is also included. The manual has full electrical/RF sensitivity and resolution specs. Original shipping materials included. I hate to part with it, but it's got to go.

Please feel free to request any additional information about the unit.

Thanks,
Mark.

>Phil

Splitting the difference (meaning 850 mHz) a full wavelength antenna would be 13.21 inches or 33.56 centimeters.

This is for a telescoping, or similiar, antenna not for one with a loading coil.

For ½ or ¼ wavelengths, divide accordingly.

The old time "rule of thumb" for receiving antennas, though, is 'the longer the better'.

I hope this helps.

I don't know if you need that particular model, but I just ordered a kit from
Jameco for $9.95. Tunable 100 to 108 Mhz, 9 to 12V. They also have a stereo
kit for $29.95 which is tunable 76 to 108 Mhz, 9V. Both are about 2" x 3".

Mark Russo wrote in message <380A76B3.108DACAB@hoflink.com>...
Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

>Is there some kind of a more sensitive/clear antenna I can get?
>
>How can I optimize reception (horizontal, vertical, etc) ??

Almost everything you'd be listening to would be vertically polarized (so
the antenna should be vertical).

The stock antenna that most scanners comes with is fair. I've heard that
you can purchase better rubber duckie antennas (I still use the original
so I can't say personally). For handheld if I want more of an antenna I
use the $10 telescoping whip antenna from Radio Shack. For portable use
at 40-50 this antenna can make a big difference. There are also car mount
and roof mount antennas to consider. For the 40-50MHz range you will tend
to have a larger antenna, especially for car use.

Other options are to use a standard antenna at a better location. Radio
Shack sells a antenna extension that has suction cups. You could mount
your standard antenna outside or higher up to improve reception.

1358. Pro 2040 - Suddenly went dead

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: cgf0@Lehigh.EDU
Message-ID: <7um2do$17s2@ns4-1.CC.Lehigh.EDU>
Source record: 104429

I have a RS pro-2040 that suddenly just died. I've had it a couple of years (from new) but never really used it much. I had it packed away and got it out the other day to set it up. It powered up fine, and took the programming ok. I left the room for a couple minutes and when I returned it was blank. It will no longer power up. I thought maybe the ac adapter went south, but I tried a known good one and it still won't power up. Any others with this model ever have the same problem. Any repair tips on this unit?

Thanks in advance,

Charlie

This is what I got.

FM PLL TX 2-3 WATTS

R. Scott Communications LTD phone 250 642-2859

They also got some 20-100 WATT

Its in Canada, don't know if they still sell.

Got mine for about $300. Its fully assembled, got a jumper switch block to change freqs. Get about 1/2 mile on my setup.

Last day! Now, with added bonus of free shipping - see:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

A chance to get everything you need in one shot!

This package includes all of the following:

- Saber III H44QXK7139CN with the impossible to find 450-501 mhz split, in near mint condition, includes full keypad/LCD/secure capability;

- Almost new battery, excellent condition;

- Stubby UHF antenna;

- Rapid charger, as new condition;

- Saber III Enhanced convertacom, with display mike, amplified speaker and all wiring and brackets (good condition);

- RIB box with Saber programming cable (will even include a 386 computer with all you need to program, if you want);

- Saber belt clip;

- leather case; and

- extra whip antenna.

This is a once-in-a-lifetime chance to buy everything you've ever needed!

Take advantage of my retirement from the EMS business!

Covers FRS, public safety bands and will even cover all those new NYPD frequencies in the 482 mhz range!

Visit: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

My bc-100 xlt has a similar problem,very low audio ,the battery runs down quickly and the chip at the bottom of the main circuit board gets very hot.I plugged a amplified speaker into the radio and keep it plugged into the power supply.Uniden will repair or exchange unit for $49.95 but is it really worth spending that much on an old radio,when you can buy a 100 channel scanner on sale for $89.95 (pro 71)

thanks wildcat, thanks a lot, you are very helpful and knowledgeable
about
these matters and that is most appreciated by members of this ng,
.....icm out.....

If you will all kindly take a close look at the header information,
particularly at the "Path" and "X-Trace" and "Message ID" information,
you'll see that these two messages originated at the same source on
primenet.com - in fact, the PATH information is identical for both of
these posts.

I thought at first that we had two jerks here, but on second thought,
it appears we have only one jerk using two different aliases.

73 and good DX'ing,
John D. Kasupski
KC2FNG, KNY2VS
Note: this address does not accept unsolicited e-mail. Please contain all
discussion regarding USENET posts to the appropriate newsgroup thread.

I have a license issued in 1884 for 5 years, & another issued in 1986 for 10
years.
So your evidence that Glenn Hansen is either lying or grossly incorrect
is valid.

WRONG, Blake. My sysop dis-agreed with the ONE SINGLE fidonet echoI was banned from during my time there. But, there was nothing he or
I could do because of the DICTATOR type control the moderator held
on the ONE SINGLE echo I was banned from during my time on Fidonet.

1382. FS: New Midland Weather Alert Monitor

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: oldgear@aol.com
Message-ID: <19991020070521.26116.00000011@ng-cd1.aol.com>
Source record: 104519

SPECS:
Weather Alert Monitor
Manufacturer: Midland
Model: 74-102

Crystal controlled for superb stability, this tiny receiver allows you to select any of 3 (162.40, 162.475, 162.55 MHZ) nationwide NOAA National Weather Service channels for immediate weather information. Listen to 24 hour voice weather broadcasts, or select flashing light or siren for severe weather alerts. Sits on your desk or nightstand, or mounts on a wall. For strong signal areas, use the adjustable antenna, and in fringe areas, plug in your outdoor antenna for reliable reception. May be operated with a 12V AC adaptor (not included with unit) , or from an internal 9-volt battery during power outages.

This unit is brand new, won as a door prize. I did try it to be sure it is working. I'm asking $25 plus $6 shipping or willing to accept trade offers. Thanks

Gosh John, don't you ever stop your lies?

Your SysOp got so tired of the moderator complaints about you, from
NUMEROUS echos, that he would reply with the first line saying...

John again?

You had complaints, and were banned from NUMEROUS echos. Matter
of fact, proven fact. Quit your lies.

>Can I charge AA NiMH batteries in my Pro 43 scanner (cat. # 20-300) using the
>recommended AC adapter (cat. # 20-188)?

Yes. The charging circuit is dumb (a diode and current limiting resistor)
which is slow enough not to overcharge cells left inside for a reasonable
period (a day or two).

>How long would I need to charge a set of 1350 mAh AA NiMH cells?

"Overnight" to "a day" ... impossible to narrow down further without
knowing the actual charging current this radio delivers. If it's the
"usual" 60-80 ma then you're talking 24 hours or more. (charging time is
capacity x 1.4 / current. The 1.4 fudge factor is because charging is not
100% efficient).

>Any
>web site suggestions on where to get a good deal on Nexcell batteries?

http://www.thomas-distributing.com

They also have external chargers that will do the job much faster (like
the well regarded Maha C204F).

>Please reply via e-mail.

No. Please reply **HERE**. The UseNet is not write-only, nor are we your
personal consultants.

Hello all.
I just recently got interested in ACARS decoding. So far I am having
great results.
But I do have a few questions if anyone knows the answers?
I'm within 20 miles of an airport and man o man do I get a crap load of
signals.
I almost always decode most of the airplanes in the air and sometimes
decode the ground station but I'm having trouble figuring out whats
what. I'm using a PCR-1000 hooked through my sound card and it does
great!

For instance:

[20/10/1999 08:44]
ACARS mode: 2 Aircraft reg: .N850AA
Message label: 10 Block id: 7 Msg. no: 4816
Flight id: AA0641
Message content:-
OS ORD /FQY31550

I know what the first line is (date & time)
I think the 2nd line is aircraft call leters?
I have no idea what the 3rd line is???
I get the idea what the 4th line is
And the 5th
But what avout the 6th line? Any ideas?

Here is another:

[20/10/1999 08:44]
ACARS mode: 2 Aircraft reg: .N850AA
Message label: 7A Block id: 6 Msg. no: 4624
Flight id: AA0641
Message content:-
OS ORD
/EM11388350-46-152858351243202202204090009000900460460450090009000900320032003200110085102
086474845000

and another:

[20/10/1999 08:55]
ACARS mode: 2 Aircraft reg: .N16709
Message label: 13 Block id: 7 Msg. no: M37A
Flight id: CO0263
Message content:-

CREW ACKNOWLEDGMENT
DISP TO 0263/20

Also, what is "airmaster mode"?

1397. HELP: Interference when hooked to comp?

Newsgroup: rec.radio.scanner
Date: 1999-10-20 00:00:00 UTC
From: bikini_spider@tranquil.hegemony.ca
Message-ID: <WCIP3.8013$G6.713434@news0.telusplanet.net>
Source record: 104534

I've got my scanner connected to my computer's sound card via the microphone output, and am attempting to record with Recall.

The problem is I am getting some weird kind of interference which is screwing up the voice activation. It is a pulsing that ebbs and flows every 1 second. It gets much louder if I run the scanner off of the power supply as opposed to batteries.

Also, I seemed to have it figured out ok last nite, by tweaking the sensitivity.. but today the sound is much louder.

Ayone have any ideas what I can do about this?

I have a ~6-8 inch antennae that came with my scanner.

Is there some kind of a more sensitive/clear antenna I can get?

How can I optimize reception (horizontal, vertical, etc) ??

I now see new Uniden BC-245XLT's for $199.95.

Anyone buying a Radio Shack Pro-92 (or something else) who
would be willing to part with their used BC-245XLT for enough
less than $199.95 to make a used purchase worthwhile? Or is
it still too soon for that?

Thanks! & 73, DavidC K1YP

You can read all about it at www.strongsignals.net. It is a real favorite of the web site owner and mine for that matter. I owned a 8200 for a while. The Yupi is more sensitive, (less intermod with the Bandercom mods), better build quality and better bandscope. Bandercom is working on a release of a modified computer controlled version as we speak. Bottom line, Yupiteru wins..

I had always understood 150MHz to be the downlink from the SARSAT system (search and rescue satellite). However, before I shot my mouth off I did some research and it would appear that 150MHz is NOT used in the SARSAT system. It is, however, definately a signal from a satellite in space. It wanders up and down the frequency band centred on 150MHz. I would suspect that when the frequency is lower than 150MHz, the satellite is moving away from you and when it is above 150MHz it is coming closer. This is known as the doppler effect and is in large part what makes SARSAT work. If nothing else, it's a great way to check the sensitivity of a scanner or other handheld radio. The signal is weak enough that it is usually lost through only a few feet of coax cable.

Cheers!

1423. Charging NiMH Batteries in a Scanner

Newsgroup: rec.radio.scanner
Date: 1999-10-21 00:00:00 UTC
From: jcsarp@aol.com
Message-ID: <19991020205914.27746.00000207@ng-bg1.aol.com>
Source record: 104435

Can I charge AA NiMH batteries in my Pro 43 scanner (cat. # 20-300) using the recommended AC adapter (cat. # 20-188)? How long would I need to charge a set of 1350 mAh NiMH cells? I have been using NiCads for years with no problems, but I would like to switch to NiMH batteries. The owners manual for my Pro 43 does not mention NiMH cells or the amount of time required when charging 1350 NiMH cells with the 9 volt 300 mA charger (cat. # 20-188).

Thanks,
John

MSRP is $349 I believe. But the latest Grove catalog had it listed as
$329 (may have been a typo since the other two new RS scanners were at
full list, I think). I'm hoping for one of those 10% off coupons
myself. Although I think Glenn at Scanners Unlimited has some kind of
promotion going (see Rich Well's page).

1439. What is this transmission?

Newsgroup: rec.radio.scanner
Date: 1999-10-21 00:00:00 UTC
From: Douglas Hinton <box2031@post1.tele.dk>
Message-ID: <380EAAC5.FEB90B0B@post1.tele.dk>
Source record: 104451

While looking for interesting transmissions a couple of days ago I tried something different. Instead of listening for audio, I used my scanners bandscope instead. I found nestled between two police channels a completely silent transmission. It was 10 kHz wide and the center carrier frequency remained stable, but the side bands varied. The side bands changed independently of each other. Sometimes the outer part of the side band ,other times the inner part changed in strength. The changes were slower than normal speech patterns. I couldn't find any audio with NBFM, WBFM, AM, USB, nor LSB. Its been suggested to me that it might be a new secure method of police communications,maybe using spread spectrum?
Can anyone help with this ? Reply to the scanner newsgroup if you like, but I would like also a reply to my own e-mail address. Douglas

From what I've been told, right now it's just the city. Jefferson County already uses a trunked system but it's not digital. Vestavia as well. Irondale, Adamsville, Morris and Midfield are on the Jefferson County system. I think there are a few other smaller towns as well.

Hoover and Homewood are still on their old systems. Vestavia is the only Over-The-Mountain city that is trunked for now but you know how fast things spread once they start.

Hi. Let me start off by saying that I'm rather appalled that 1) You would think that the kind people of this newsgroup would have to be coaxed into giving you a simple list of frequencies and 2) that you would so publicly and flagrantly offer to give out illegal copies of software. Are you aware that there is a penalty fine of $250,000 for doing that? I'm sure that the company you work for would be vary interested to know that you, an employee no less, are giving out copies of their software. I also think that your ISP would greatly disapprove of you using their equipment and services to conduct illegal activity. Simply because you insulted these fine people, by offering to conduct illegal activities as payment, for something this newsgroup was created to share freely, I believe I will take the liberty of reporting you to your ISP tomorrow morning, for now, I think I'll go to bed.

Go to www.phreak.com/icom.htm, it will diagram where you will add 2
10K ohm resistors on to empty pads on the board (they just left them
out at the factory for US version). The resistors will be 0603 SMD
package (surface mount).They are labled "103" on the resistor itself,
look around and you will see others like it on other parts of the
board. I did this on mine and it worked like a charm! After you add
the resistors there is no need to do a software reset on the radio.
But be careful soldering them, for they are extreamly small resistors.
Just have a lot of light and a magnifing glass! Hope this info helped
and good luck.

Dan,

I've listened in Marietta,GA area and don't here anything like that.

It would help if you would tell us where you were when you heard this. The date(s) and time(s). How quickly it faded. Could have been you were hearing some form of interference.

Probably Russian Navigation Satellites. Should be audible around 400
mHz also.

Toilet Boy will never post the information because he cannot post what does not exist. Besides, Blake never made some of the calls to the friggin' loons elderly father. However, Bob Garble did call the idiot Mackeral at his home and office several times. Those are the calls that Toilet Boy is blaming Blake for. As usual, Toilet Boy is a liar and a fraud.

In my area they not only have digital trunking but it's also encoded. So even if you had a digital scanner, you would not be able to hear it because of the encoding/scrambling etc. I also have heard that the state police detective cars now have digital scrambling and soon the state police patrol cars will have scrambling in them. Motorola must be making a lot of money on this digital stuff.

Get software and a cable to program it. It's the only way that makes sense.

Carry a pair of charged batteries in your pocket.

It's a great scanner, have fun.

Encoded != Scrambled

Encoding means making a message ready for transmission by whatever mode is desired. Messages are encoded into ASCII, RTTY, fax, packet, xTOR, ACARS, Morse, human speech, body language, sign language, etc.

Just because the police say their communications are "secure" does not mean they actually understand what "secure" involves. It may simply be digital without being encrypted.

Sounds like a birdie. Is the frequency related in any mathematical way to
the internal operating frequencies of your scanner or bandscope?

>changes were slower than normal speech patterns.

That makes it unlikely to be digital.

>it might be a new secure method of police communications,maybe using
>spread spectrum?

I doubt it. SS moves around, and you can usually hear a SS burst if you
happen to be tuned to the right frequency at the right time.

There is no need for "journalists" to be beyond the barriers of an
emergency scene. They do not contribute to patient care, fire
suppression, law enforcement, or the protection of the public. They
can get all of the information they need either after the barriers are
removed, or from official press releases.

I still cherish the sight of Sam Donaldson in a row boat in Bahrain
harbor, trying to get near the U.S. Navy ships moored there during the
"Stark Incident". Talk about pathetic!!!

Does anyone have any reliable data that tells me which of the various flavors of Yupi 9000 units (such as the various Bandercom modified units, versus the new Yupi 9000 Mk II in the silver case) have the best overall RF performance? (I value selectivity and image rejection over ultimate sensitivity, but I don't want a deaf unit either).

Then, how would you rate the latest production AR8200's against any of the various flavors of Yuip 9000?

Thanks in advance,

-

Well Monte, i actualy think i found one, im just waiting on a reply via email about it to be fore sure, but i might know someone who wants to buy the one you mentioned. As for selling my old one, i had thought about it, but now im thinking of keeping it around for parts.. not that i will probably need any, anytime soon but its always nice to have some around intead of paying rat shack an arm and a leg for parts, i was looking for a replacement transistor for it a few months back and radio shack wanted a total, shipping included since they dont ship to their stores for free anymore, $5.25.. for a stinkin transistor! heh.. I do know of someone who has a dead 2006 he might wanna part with though, i'll ask him about it next time i see him (every few days) and see if he wants to part with it. If so, i'll email you and let you know about both the other scanner and the dead one :)

And to everyone who has reply'd via email and here, thanks for all the reply's seeing as how usualy when i post something NO ONE reply's anymore hehe.. i really appreciate all your help guys :)

OH, one last thing, this is a kinda touchy area for some people, whats the best software for the OS456 board? Im looking for an up to date version of some software for cheap... thats if i do get this other scanner :)

1481. FA: ### MOTOROLA ADVISOR ALPHA PAGER

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19991022121614.23800.00000612@ng-fi1.aol.com>
Source record: 104293

For Sale: Motorola Advisor - Alphanumeric Pager

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186175665

The ADVISOR is a full featured alphanumeric pager that can be used to receive and store text and numeric messages as well as conventional numeric messages. It displays messages over a large four line display, and has an advanced feature set.

Get a complete list of features from Motorola's Website at
http://www.mot.com/MIMS/MSPG/Products/Alpha/advisor_linguist/features.html

This pager is in excellent shape (10 out of 10 cosmetically) and is almost brand new. I've just been given a cell phone through work and no longer need this. This pager is worth over $150! Reserve price is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186175665

1482. FA: ### MOTOROLA CP-1250 ALPHA PAGER

For Sale: Motorola CP-1250 Alphanumeric Pager, with Manual and Warranty

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186182611

For active people with too much to do and too little time, Motorola gives you a dependable and stylish big screen word message pager so you can get things done with ease. The Motorola CP1250 combines advanced "Big Screen" technology with a premium feature set. The CP1250 can display up to eight lines of text and up to 26 characters per line. It is so powerful that it can even receive and display graphics, such as logos, charts and graphs. The CP1250 supports Motorola's FLEXTM Information Services Protocol to receive and display large quantities of Information Service messages in an easy to read manner. The user-friendly Message Management features allow stored messages to be moved into one of five relevant folders, such as 'task list' and 'phone list'. The 8-line to 4-line zoom control serves to further enhance its overall ease of use.

Get a complete list of features from Motorola's Website at:
http://www.mot.com/MIMS/MSPG/Products/Alpha/CP1250/features.html

This pager is in excellent shape (10 out of 10 cosmetically) and is almost brand new. I've just been given a new phone through work and no longer need it. It comes with original manuals and an insurance plan through Motorola for free replacement if pager's damaged. This pager is worth over $180! Reserve price is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186182611

So, can you make a value judgement? For you, is the addition of LTR,
the better display, and the additional channels (what else is better
than the 245?) make this something you'd own (compared to the less
expensive 245)?

Thanks,

-

>handheld scanner with me while walking the street?

Here's the law in Florida:

State of Florida Scanner Law

Florida Statutes (1995)
Title 46, CRIMES
Ch. 843, OBSTRUCTING JUSTICE
ï¿½ 843.16

843.16 Unlawful to install radio equipment using assigned
frequency of state or law
enforcement officers; definitions; exceptions; penalties

(1) No person, firm, or corporation shall install in any motor
vehicle or business establishment,
except an emergency vehicle or crime watch vehicle as herein
defined or a place established
by munincipal, county, state, or federal authority for
governmental purposes, any frequency
modulation radio receiving equipment so adjusted or tuned as to
receive messages or signals
on frequencies assigned by the Federal Communications Commission
to police or law
enforcement officers of any city or county of the state or to the
state or any of its agencies.
Provided, nothing herein shall be construed to affect any radio
station licensed by the Federal
Communications Commission or to affect any recognized newspaper
or news publication
engaged in covering the news on a full-time basis or any alarm
system contractor certified
pursuant to Part II of Chapter 489, Operating a Central
Monitoring System.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement
officer or employee of any
city, any county, the state, the Federal Bureau of

Investigation, or the Armed
Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of
the state or any state fire
department vehicle;

3. Any motor vehicle designated as an emergency vehicle
by the Department of
Highway Safety and Motor Vehicles when said vehicle is
to be assigned the use
of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle
by the sheriff of any
county in the state when said vehicle is to be assigned
the use of frequencies
assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle
by the chief of police
of any city in the state when said vehicle is to be
assigned the use of frequencies
assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by
any person participating in
a citizen crime watch or neighborhood watch program when
such program and use are
approved in writing by the appropriate sheriff or chief of
police where the vehicle will
be used and the vehicle is assigned the use of frequencies
assigned to the county or
city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur
radio operator or station
license issued by the Federal Communications Commission or to any
recognized newspaper
or news publication engaged in covering the news on a full-time
basis or any alarm system
contractor certified pursuant to Part II of Chapter 489,
Operating a Central Monitoring
System.

(4) Any person, firm, or corporation violating any of the
provisions of this section shall be
deemed guilty of a misdemeanor of the second degree, punishable
as provided in s. 775.082
or s. 775.083.

Doesn't say anything about walking down the street with a scanner...it
refers specifically to a motor vehicle, which is defined in the law.

>Another consern, I'm a pilot and almost always have me scanner with me while
>near any airport?

This would seem to be fine, as long as you don't run afoul of the FAA
regulations pertaining to the use of scanners aboard an aircraft -
which I've included below for your reference.

U.S. Federal Aviation Regulations

91.21 PORTABLE ELECTRONIC DEVICES

a.Except as provided in paragraph (b) of this section, no person
may
operate, nor may any operator or pilot in command of an aircraft
allow the operation of, any portable electronic device on any of
the
following U.S.-registered civil aircraft:
1.Aircraft operated by a holder of an air carrier operating
certificate or an operating certificate; or
2.Any other aircraft while it is operated under IFR
[Instrument
Flight Rules].
b.Paragragh (a) of this section does not apply to --
1.Portable voice recorders; 2.Hearing aids;
3.Heart pacemakers;
4.Electric Shavers; or
5.Any other portable electronic device that the operator of
the
aircraft has determined will not cause interference with the
navigation or communication system of the aircraft on which
it
is to be used.
c.In the case of an aircraft operated by a holder of an air carrier
operating certificate or an operating certificate, the
determination
required by paragraph (b)(5) of this section shall be made by
that
operator of the aircraft on which the particular device is to be
used.
In the case of other aircraft, the determination may be made by
the
pilot in command or other operator of the aircraft.

From: Robert Smith <rlsmith@pacifier.com>
Message-ID: <38109940.0@news.pacifier.com>
Source record: 104302

The continuing saga of my BC245XLT.

As is stated in my last message, Uniden had agreed to pick up my scanner and send me a replacement as soon as they received mine. FedEx showed up just as Uniden ordered. I tracked the scanner back to Ft Worth where it was received on 10/14 at 11:00AM.

It is now 10/22 and I still don't have a replacement scanner. What I do have is a new SRO number (1598606 the ser.# of the scanner is 95000481) for those of you that would like to follow this saga a little closer.

I have sent two e-mails to the party that helped me the firs time with know response. I am starting to put all of the decimation together for a complaint to the U.S. Attorney office (provided they all arent tied up with the Waco mess).

Since I sent in the complete package, scanner, antenna, books and all other items that came with the scanner I can't lookup the warranty information on this produce, but the way they are going they will keep messing around until it is out of warranty.

One other thing that I didn't mention is that when I got it back from Uniden for the first problem it had a new problem. I would not receive anything, not even U.S. Weather, which is not the problem that I sent it in for in the first place.

I have to ask myself a quest about this problem with Uniden. If this is the way there service department works, (I have seen other postings that would suggest it is) then why don't Monitoring Times and PopComm say something about it in their publications. It would seem to me that the responsibility of a publication is to their readers and no one else.

More to follow as it unfolds and if I can ever get USSO done I have a ready made editorial.

I have a near mint IC Q7A for sale.
Standard un-modified unit I've used very little.
Bought from HRO about 6 months ago for about $199.00
Will sell for $150.00. Will for this COD in the US.
Have the adapter RS232 kludge (home made- but works) for a PC
that I'll throw in.
Works with the free software available on the web.
I will also throw in an earphone with the "weird" ICOM / Yaesu plug that fits
the Radio.
It has the wall charger and two NiCad AA cells (600Mah)

Greetings Fulton..

Looks like you've got a nice unit!! However, I think at the price quoted it may be competing with Time Step's PROscan receiver:

Reference:
Scroll down until you see PROscan APT Receiver, also click on the pictures
http://www.time-step.com/apt/apt.htm

In the USA it's sold by Swagur Enterprises Inc. (joint cooperation) as illustrated at the following:
http://www.swagur.com/
On the left hand side of the screen click on APT Satellite. At the new window, scroll down and find Swagur-TimeStep PROscan Receiver. Notice the USA price.

No doubt that your receiver does indeed offer some features that this receiver doesn't. One thing that is nice about the Time-Step PROscan Receiver is there's no squelch. The scanning portion of the receiver locks up once the 2400 Hz carrier of the click-click-click sound is heard as the satellite comes over the horizon. Yours may be designed the same way..

Cheers,
Gary

After the QST article regarding the inexpensive R139 over here in the states, many folks are going this route only due to the price. Ref.: http://www.hamtronics.com/ and the receiver at: http://www.hamtronics.com/r139.html . However, this is *certainly* not to be compared to what you've got!

..SNIP..

OK, I'm pretty new to trunking. I've read Rich's first-impressions
review (http://www.strongsignals.net/htm/imp92.htm), where he says:

"Each trunked bank is allowed to store up to 100 trunking IDs. The big drawback is that
there are no
subdivisions for these IDs (what Uniden refers to as Scan Lists)"
and
"To lock out a specific trunking ID, you need to program it into the 100 entry list and
then lock it out!
This is also a poor method since not only is there no simple way to lock out an ID, but you
must also
use one of the 100 IDs to do so! This also means there is no way to lock out IDs when in
Open
mode!"

In the Pro-92 manual (http://members.aol.com/Pro92Scanner/20-522.pdf),
it says on page 62 (under "Lockout Out Talk Groups ID":

"Press PGM
Press TRUNK
Press FUNC. Up arrow or Down arrow to move to the desired bank
Press Up arrrow or Down arrow to selet the ID memory
Press L/OUT to lock out the ID.

Although I haven't read every page of the Pro-92 manual, I haven't run
into information about the "100 IDs" that Rich talks about. So,
what's the deal here? What am I missing? Could someone take a few
minutes and explain this to us clueless laymen?

Thanks,

-

I understand everyone's frustration w/ the lack of knowledge that
abounds at Radio Shack. Just remember, they are a huge chain, and high
caliber personnel is hard to come by. I suggest the following:
appreciate Radio Shack for its convenience, and know what you're
looking for before setting foot in the door.

1501. Monitoring the Blue Angels from my recliner! (with a couple of questions)

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC
From: kb5fas@postoffice.swbell.net
Message-ID: <3810EAAF.EA997592@postoffice.swbell.net>
Source record: 104313

The Blue Angels are scheduled to perform this weekend (October 23 & 24) at the Little Rock Air Force Base Open House. Living <3 miles from the base has given me an opportunity to monitor some of the best Milcom Communications I've ever heard.

The Blue Angels arrived Wednesday so I've been able to monitor their arrival as well as listen to them yesterday and today practice their show. It is amazing to be able to sit in your recliner and watch them perform literally out my front window!

A couple of questions come up...

The primary three frequencies they have used for their rehearsals has been (1) 238.150 (2) 275.350 (3) 345.900. They are using all three frequencies during the flight (not simulcasting) and keep skipping between the three frequencies. I thought at first that there might be two aircraft paired together on a frequency to cut down on confusion (i.e.: Plane 1 & 2 on 238.150, Plane 3 & 4 on 275.350) but it sounds like the "crew leader" that coordinates the commands is the same person on each frequency. I was wondering if anyone could shed some light on the use of multi-frequencies during the show. It is interesting to note today that they were still using the same three frequencies but the majority of the traffic was on 238.150.

As this is my first time to monitor the Blue Angels, there are a couple of terms they use during the flight constantly and was curious about. The first is the following from the "crew leader" who says ".....stand by the boards.....stand by.....BOARDS!" The second is some type of "sound off" with what sounds like each crew member counting off using phonetics several times during the show - they talk mighty fast on this so it was hard to pick it up exactly. Lastly, does anyone have any recent logging with the frequencies of the ground crews? And is there much traffic between the ground and aircraft during a flight?

We're going to both days of the air show and are going to film the show with the camcorder and feed the audio from the scanners into the camcorder during the show. That will be the best of both worlds.

Thanks and 73's
KB5FAS
Joe

1502. Re: Florida Scanner Law

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC

Here is what I have learned ... quotes from the E-mails of others.
73, DavidC K1YP

"Florida exempts Amateur Radio Operators from the law.. I have gone
to the Library and looked up the law and made a zerox copy. However,
the AEC for SKYWARN for this county is a Sgt working for the County
S.O and he says not to worry."

THE RELEVANT FLORIDA STATUTE:

843.16 Unlawful to install radio equipment using assigned frequency of
state or law enforcement officers; definitions; exceptions; penalties.--

(1) No person, firm, or corporation shall install in any motor vehicle or
business establishment, except an emergency vehicle or crime watch vehicle
as herein defined or a place established by municipal, county, state, or
federal authority for governmental purposes, any frequency modulation radio
receiving equipment so adjusted or tuned as to receive messages or signals
on frequencies assigned by the Federal Communications Commission to police
or law enforcement officers of any city or county of the state or to the
state or any of its agencies. Provided, nothing herein shall be construed to
affect any radio station licensed by the Federal Communications System or to
affect any recognized newspaper or news publication engaged in covering the
news on a full-time basis or any alarm system contractor certified pursuant
to part II of chapter 489, operating a central monitoring system.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any
city, any county, the state, the Federal Bureau of Investigation, or the
Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any
state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department
of Highway Safety and Motor Vehicles when said vehicle is to be assigned the

use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county;

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to part II of chapter 489, operating a central monitoring system.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

History.--ss. 1-4, ch. 26886, 1951; ss. 24, 35, ch. 69-106; s. 1049, ch. 71-136; s. 1, ch. 86-55; s. 1, ch. 90-62.

Source record: 104321

I would suppose that the absolute answer would be "yes" but not without some pretty hefty equipment. Most scanners (I said most so please don't get on my case about it) will only monitor 1 frequency at a time. Spread spectrum means it uses multiple frequencies. Digital, means that its just that, digital. Not analog. Most scanners (I said MOST again, not all) will not be able to decode and playback these signals. Of course, you could shell out many thousands of dollars and might be able to do so, but its not worth it. Not to mention, listening to anybody's phone call (but your own, calls of people under your guardianship, and when you have a warrant/permission from that party) is highly illegal.

1510. My BC245 and Uniden

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC
From: Robert Smith <rlsmith@pacifier.com>
Message-ID: <3810f49e.0@news.pacifier.com>
Source record: 104322

n defense of Uniden I got the following after making an irate phone call to Uniden and demanding a replacement scanner or I would start legal action through the U.S. Attorney.

==========

Hi, Mr. Smith, please disregard the SRO information. Our repair department had to set the unit up like an actual repair in order to close it out and return the unit to stock. I did speak with the repair manager and the head technician. Your new unit will be leaving the warehouse today fed ex. It is in our shipping department and it will be shipped fed ex over night. I would expect the unit to be there no later than Monday. I am sorry you were under the impression they were going to repair the unit. That is just normal procedure to set it up as if it were a repair. Do not get discouraged we have taken care of the situation. I apologize for the misleading information. Hope you get the unit Saturday. I don't know if fed ex delivers in your area on Saturdays, they do here. If so you will have it some time Saturday. Thank you for you patience and cooperation. Have a good weekend.

Robert Smith (Gehri)

I would have to say, with all due respect, that it sounds like your too anxious. I've sent back plenty of stuff in my time (though not to UNIDEN) and to wait more than a week (in your case, 8 days so far) is not really that bad of a wait. If they do play around with your for a couple of weeks, then it's time to get mad. Instead of e-mail, why not try a real form of communication, like the phone. Sure they are going to jerk you around on the phone for a little while, that's some kind of universal law, but eventually you will be able to demand to speak to somebody with a clue and hopefully get some answers.

Robert Smith <rlsmith@pacifier.com> wrote in message
news:38109940.0@news.pacifier.com...
| The continuing saga of my BC245XLT.
|
| As is stated in my last message, Uniden had agreed to pick up my scanner
and
| send me a replacement as soon as they received mine. FedEx showed up just
as
| Uniden ordered. I tracked the scanner back to Ft Worth where it was
received
| on 10/14 at 11:00AM.
|
| It is now 10/22 and I still don't have a replacement scanner. What I do
have
| is a new SRO number (1598606 the ser.# of the scanner is 95000481) for
those
| of you that would like to follow this saga a little closer.
|
| I have sent two e-mails to the party that helped me the firs time with
know
| response. I am starting to put all of the decimation together for a
| complaint to the U.S. Attorney office (provided they all arent tied up
with
| the Waco mess).
|
| Since I sent in the complete package, scanner, antenna, books and all
other
| items that came with the scanner I can't lookup the warranty information
on

| this produce, but the way they are going they will keep messing around
until
| it is out of warranty.
|
| One other thing that I didn't mention is that when I got it back from
Uniden
| for the first problem it had a new problem. I would not receive anything,
| not even U.S. Weather, which is not the problem that I sent it in for in
the
| first place.
|
| I have to ask myself a quest about this problem with Uniden. If this is
the
| way there service department works, (I have seen other postings that would
| suggest it is) then why don't Monitoring Times and PopComm say something
| about it in their publications. It would seem to me that the
responsibility
| of a publication is to their readers and no one else.
|
| More to follow as it unfolds and if I can ever get USSO done I have a
ready
| made editorial.

Sorry Sooung but there's no law that said that listening to radio frequency is illegal! Docoding digital transmission it is, but everything that is transmited anolog is legal to be listen to. Except for you United States resident, you're not allowed to listening to cellular phone with severe punishment. BUT ALL CORDLESS (not cellular) ARE LEGAL TO LISTEN!!!!!!!!!!!!!!!!!!!!

You're welcome for the info

"....._always_ post messages twice" is a _bit_ of an exaggeration
isn't it?

The reason, this time, on the 1st response attempt I got a 'WebTV☐ is
having technical difficulties, please try again" message, so I did.
Result = two posts.

I am really sorry it caused you so much stress and anguish. I realize
that "spam",cross-posting, off topic posts, flame wars,etc. are not a
problem on this NG, and my unintentional, duplicate response was the
worst thing that has happened here recently.

So, if it should happen in the future, or even if it doesn't, _please_
feel free to skip or filter the duplicate and even the original post.

Sincerely,

njtonv@webtv.net

Actually I was just being sarcastic but where I live I can't program all of
the ID's in anyway because the system is used by PD,EMS,Fire,Sheriffs
Department and there are 439 ID's in all.
Anyway it seems that when a new radio comes out it has its benefits and its
shortcomings,but no matter I am still gonna get one and work around the ID
store problem.

I don't see the purpose of the Pro-94 really except for maybe the
extended coverage which is not that impressive anyway.I don't think(Which is
my opinion)that the 94 will sell that well.

They use AUDIOVOX FRS radios. Some even use Whistler FRS. However,
the top of the line equipment used by the best law enforcement
agencies are 49MHz Radio Shack walkie talkies.

Well if i remember correctly, he's been waiting longer than a week, this is the second time around for him. He already sent it in and had them send it back saying they dont service that radio anymore (Uniden Idiots) and didnt fix a thing. This time (as i stated before, if my memory serves me correctly) he's having to wait yet again... he's already waited some 60 days already, you dont think thats a bit long? I feel he has every reason to be anxious and upset..

my $0.02's

>Was wondering what it would take to switch from UHF to VHF?

Replacing all of the RF electronics, to start with (since that will have many tuned circuits, and operating at 1/3 the frequency will likely require all of the frequency-selective circuits to use different components). The RF amplifier module will need changing too.

You might be able to keep the digital hardware, provided you have some way of reprogramming all of the magic constants used in converting a displayed frequency into PLL divider counts and such. There would also be changes in the user interface software, as well.

Basically, it would be far too much work to be worthwhile in anything but the most extreme circumstances.

Could this be speed brakes? Many military aircraft have these, used
to dump energy rapidly through air drag. They're used to decelerate,
or to allow the aircraft to lose altitude quickly without picking up
too much speed.

I'm sequentially scanning several conventional, three Motorola,
one EDACS, and one LTR system on a PRO-92.

While there appears to be a delay when while scanning
in the EDACS bank, the other systems exhibit no appreciable delay.

What kind of signals are transmitted in the 2000.0 MHz.? Are they still audio? I was looking through the local database (http://www.perconcorp.com/) of Freq.'s and there are quite a few of them (from county, city and P.D. - business).

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

For pager voice message, I've _read_ the "old" mobile phone (IMTS)
freqs:

152.030 mHz to 152.810 mHz

and

454,025 mHz to 454.650 mHz

both bands using 12.5 kHz spacing

are used just about nationwide. Especially the UHF (454 mHz) freqs.

Also, rarely, if ever, 35.26 to 35.66 mHz
(0.4 & 0.8 kHz spacing) may be used in (very) rural areas. (Note, 0.8
kHz space is for 35.54-35.62 ch.'s ZB & ZW only!)

900+ freqs are often digital modes.

Of course, I have never tuned any of these freqs. myself, since that
would be _wrong_. Just passing along public domain information FYI
only.

I hope this helps.

1549. Florida Scanner Law

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC
From: av8tor@flash.net
Message-ID: <4zYP3.3722$pJ3.228852@news.flash.net>
Source record: 104377

Been thinking of moving to Florida however I just discovered they have an law against mobile scanners. Could someone tell me if this means I can't have a handheld scanner with me while walking the street?

I carry one with me a lot when fishing (to listen to marine & Coast Guard).

Also, what about people in the Kennedy Space Center area, is it true they can't listen to NASA comms during a launch.

Another consern, I'm a pilot and almost always have me scanner with me while near any airport?

And finally, does Officials in Florida really enforce this law?

Thanks
George

Try 152.030 to 152.810 mHz (30 kHz spacing), and 454.454.650 mHz (25 kHz spacing) for voice only pager transmissions.

I have no 1st hand knowledge of the "traffic" on freqs, of course, listening in would be _wrong_!

Source record: 104382

Well, I've had mine for about 2 years now. Although it sits very close to my computer and monitor, it seems VERY susceptible to locking on to all kinds of garbage being spit out by my system. My cheapie handheld is about all I can use around the computer (probably because it is not as sensitive). Although I bought the 760 for its 800 mhz capability I really wanted to have it connected to my computer so that some "other" programs of interest could be run. But due to the garbage it picks up, as well as its mediocre 800 mhz reception, I wouldn't recommend that anyone rush out and buy it, except for plain old desktop scanning...far away from a computer!
OR, perhaps mine is just defective, who knows?
Anyone have any recommendations for a scanner that covers 800 MHz, has easy access for a discriminator tap, and can withstand the interference found near a computer? Post replies to this group, thanks...JOHN

It seems that the volume on my trusty 2006 is not as strong as it used to be. The radio is working fine otherwise but it seems to me that I have to turn that volume knob to a higher setting than I used to to get a comfortable listening level. Has anyone else encountered this or is old age (and poor hearing) just creeping up on me?

For Sale: Nokia 2190 Digital Cell Phone w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186155825

The Nokia 2190 offers a long battery life, enhanced sound quality and many other features with proven value. Communicating is a breeze with simple menu choices and a large, easy-to-read screen with automatic help to guide you while operating the phone. Use a Data Card with the Nokia 2190 and send data (e-mail, faxes and computer files) as well as access the Internet.

Easy-to-use interface
On-screen help
Large backlit screen
Full Featured:
Phone book will store up to 125 names and numbers
8 distinctive ring tunes
Your phone is also an alpha numeric pager
Versatile range of accessories for home, office and auto
Voicemail
Caller ID

It comes with manuals, power cable, slim battery, cigarette lighter charger, leather carrying holder with belt clip, and original retail box! This package is worth over $250! Reserve price is VERY reasonable...

This phone is in excellent shape (9 out of 10 cosmetically) and is almost brand new. I had it through Sprint Spectrum's service and selling because I got a new phone through my company and this one is not needed anymore. This phone can be used with any GSM 1900 provider.

I also am selling a complete hands-free carkit for this phone at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186167772. Note: The included battery is having trouble holding a charge, but a new battery can be purchased for $30 from Nokia. This phone is GSM 1900 compatible, and must be used with a compatible service provider. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186155825

1564. FA: ### NOKIA 2100 SERIES COMPLETE CAR-KIT

Newsgroup: rec.radio.scanner
Date: 1999-10-22 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19991022121556.23800.00000611@ng-fi1.aol.com>
Source record: 104392

For Sale: Nokia 2100 Series Complete Hands-Free Car Kit with Privacy Handset

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186167772

Works with any Nokia 2100 Series Digital Cell Phone (i.e. 2160, 2170, 2180, and 2190)
Allows for Hands-Free Speakerphone Conversations
Includes Central Data Box for Connecting Peripherals
Central Data Box includes data port for connecting fax/modems

This Kit Includes:

Central Data Box
Custom Dash-Mount Phone Holder/Charger
Remote Microphone and Remote Speaker for hands-free conversations
Glass-Mount Antenna
Privacy Handset for private communications
All necessary wires for complete installation

Complete kit combines the convenience of handsfree with optimal sound quality and includes privacy handset. This unit is in excellent shape (10 out of 10 cosmetically). I used it with a Nokia 2190 Phone (which I'm also selling at http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186155825) and selling because I got a new phone through my company and this one is not needed anymore. This car kit retails for over $250! Reserve is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186167772

Public Law 103-414, known as the Digital Telephony Bill, was enacted in November, 1994. One of the amendments to this bill adds cordless telephones to the list of prohibited listening targets in ECPA.

Hi,

I am in search of Plectron Receivers (preferably the smaller, later units in the "8000" series or "Chief's Edition") in working, functioning order.

Contact me if you have 1(or more) to sell.

Thanks
Ted

Source record: 104157

it might be ok at home, but to carry around, too big. With Radio Shack coming out with the pro 92 with alpha-numerics and others will follow (i.e. Uniden) I can't see carrying it around , or even having it at home . I can make up a list with cross references on a disk. Sorry, no thanks.

Now, if it were smaller.....

I have the same rig and have experienced the same problem.
I was never clever enough to put a loop there, so I do resolder the antenna
connection every 2-3 years or so. My rig falls to the ground
at least 20x a year.
I suppose that I was afraid of making a low pass filter with a loop.
Fortunately, it is easy to fix. The rig's case comes apart easily, and it
is very simple to remove one of the plug in printed wiring boards if
need be.

That's true.

It'll be replaced by the BC-780. Motorola, EDACS, Conventional. CTCSS, DCS, Alphanumerics, etc.

The other brand often used is GE/Ericsson. Having used Ericsson
equipment at work and working directly with the local FD as part
of my job (they also use this brand), I can tell you this brand is NOT
the highest quality! We are required to purchase this equipment
because some weenie in procurement got us involved in a contract with
these people. I'll be glad when the contract is up! Neither their radios
or cell phones are worth their weight in dirt. Though Motorola
representatives
can be a pain sometimes, their equipment is the finest on the market.
It is extremely reliable and almost bullet proof. Our Firefighters seems
to have a habit of drop testing all the equipment just to make sure. ;-)

In California it would probably go out on the radio something like this ...
Dispatch:
Attention any unit in position, 23013 speed , Southbound Interstate 900, a
White Chevy Camero, Lic XXX000, any information this station.

Responding car:
75Mary copy

or I have heard "23013 High Roller" used ... It is different for every
different agency ...

Hope this helps ...

Yes, it's definately commercial

First, you'll need the RSS.

www.mot.com for the radio service software. Expect to pay around $300.

Then you'll need a programming cable and a radio interface box (RIB).

Check out www.batlabs.com for the rib and cable.

It'll be cheaper to have your local Motorola shop program it for you.

1592. Little Rock Air Force Base Open House Freqs Heard

Newsgroup: rec.radio.scanner
Date: 1999-10-23 00:00:00 UTC
From: kb5fas@postoffice.swbell.net
Message-ID: <38123C74.9EDEAA96@postoffice.swbell.net>
Source record: 104170

Just returned from the 1st day of the two day Open House at the LRAFB - I spent about an hour or so in the vehicle searching for active frequencies and found the following (in no certain order):

141.305
138.400
148.300 - Very Active - "AirBoss" (Event Coordinator) and "Big Mouth 1" heard constantly
150.200 - "Red Two" and "Red Command" heard
148.200 - "Blue Two" heard
150.300 - Security Frequency
149.300 - Concession Stand Coordination (Sold LOTS of Hot Dogs <g>)
150.100 - "Big Mouth" heard hear from time to time advising "This will be a photo pass" whenever aircraft would be in good photo opportunity position.
148.100 - "Trans One" and "Services One" heard
150.350 - C130 Traffic overheard here
120.600 - Primary Tower/Aircraft Communication Frequency
284.000 - "Air Boss" Heard
125.350 - "Red Dog" Heard

Several other frequencies with Hit and Miss traffic mostly in 148-150 range. Did hear data being transmitted at 150.050 which I believe was a Navigation Satellite flying over.

Regarding the Golden Knights Parachute Team - Much activity between Tower and "Golden Knights 607" on 120.600 - On one exchange, tower asked if all their people were accounted for on the ground following their jump - Aircraft replied "Have not heard from our guy on the ground yet". Not sure what the frequency was between the Golden Knights Aircraft and their ground crew (anyone know?)

Blue Angels aircraft were active on two frequencies during their show (1) 238.150 (2) 275.350 - Also - the ground crew VERY active on 170.900.

Some great aircraft on display but I guess I came more to "listen" then "look"

Joe,

While there are certain generalities, frequencies for military aircraft are mostly assigned by unit, and not be aircraft type. In other words, if you know what squadron the C-130s were from chances are you could find their squadron assigned frequencies by asking in the right place.
The right place is Milcom, the e-mail listsever dedicated to military monitoring.
To join:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area just post a message stating your location
and requesting frequency help and you should get some answers.

I'd like a used Uniden BC-245XLT scanner but cash is getting
more scarce by the day. I would be willing to swap all of the
following for one:

1. Radio Shack Digital Sound Level Meter (as-new in box w/case)
2. Heath AV-3 Audio-VTVM w/manual copy
3. Heath AM-2 Reflected Power Meter w/manual copy
3. Book: From Tin Foil To Stereo by Oliver Read (minor cosmetics)
4. 56K v90 PCI fax-data-speakerphone modem w/CD
5. Audiosears military surplus headphones H-113U
6. Two as-new knife switches, copper with brass fittings on porcelain
base.
7. $100. cash

For a local Florida swap-plus-cash I will include a Heath IO-30
oscilloscope in sound working condition w/manual copy, a
12v 3a regulated power supply (handy for shack accessories),
a cell-phone bag phone (worked when taken out of service), a
dipole balun, and perhaps a couple of other goodies.

Thanks! & 73, DavidC K1YP

I have the winradio 1000 and I think its quite good, only goes to 1300 MHz thought, and some people like higher, the software issued with the card is not bad, easy to use, but there is a software package called degital suite and it seems to make life a whole lot better with this card, fax decoding etc... spectrumscope analyzer. pretty good stuff. and for those guys saying software is rare, your winradio card is simply a audio out so you can loop it back into your sound card and analyze the signal with most sound card decoding software.

But I will say that they are right, some external scanners are more powerfull but its all up to what you want.

Hope this is a help.

NZ.

Bob,

Sounds like you may have one of these already. After reading Rich Wells' "First Impressions", I had a few questions about the performance when using lowspeed data to scan Motorola trunked systems. Your comments are appreciated:

The question was raised in an another forum about the PRO-92's method of using lowspeed data to scan Motorola systems that use consecutively numbered talkgroups. Lowspeed data is used to transmit the current talkgroup assigned to the channel, and talkgroup info for any priority monitor talkgroups that happen to be active during the transmission. I recall that the reason for odd-numbering talkgroups was to ensure proper operation of the priority monitor feature, and I'm not sure if it affects the current talkgroup info sent via the lowspeed data. Hopefully this issue will be addressed soon by someone closer to the actual design of the radio. It would be a shame if the radio was indeed crippled by this limitation. Any thoughts?

Using the lowspeed data to determine the current talkgroup has some inherent timing issues that may affect overall scan speed performance. Though this is the only way to scan an EFJ system, it's probably not the "preferred" method for a control-channel based system like Motorola. I'm very interested in hearing about how the scanner performed when scanning a Motorola system using this method. Specifically -

Scan rate is spec'd at 25 channels per second. How well does this spec hold up when scanning only a few IDs on a busy Motorola system?

Assume the radio is scanning a Motorola trunked system. As it scans the channels, it will encounter channels with no RF signal, and channels with an active RF signal. If the channel has no RF signal, the radio should just keep on scanning. On the channels with an active RF signal, the radio needs to determine if the talkgroup that is using the channel matches a talkgroup in the scan list. How long does it take the radio to "decide" if the current ACTIVE channel has a valid talkgroup ID before it can resume scanning? Is the length of this time affected by the number of IDs in the scan list?

Did you try running in "ID-HOLD" or similar mode to follow traffic on one talkgroup? How well did the radio perform? Did you miss any messages? (Control channel based scanners would not miss any traffic at all under this scenario, whereas this model would have to resume scanning all of the frequencies in the trunked system until the "id-hold" talkgroup is located again.)

Monitoring multiple trunking systems (LTR/MOT/EGE) and conventional channels at the same time would be an acid test for a radio like this. Did you try it? How did the radio perform?

When scanning Motorola trunking channels, how does it handle the channel with control data on it when it's encountered (in other words, how long does it take the radio to figure out that the signal is control channel data and should be skipped)? Does it help performance to lock out the current control channel daily?

The 100 talkgroup lockout limitation is a concern for large systems with more than 100 talkgroups. I guess you only list the talkgroups you're interested in on the scanlist once you've figured that out, then run the bank in closed mode to keep the other stuff out. Thoughts?

When "searching" a Motorola system (iow, "Open" mode), will the scanner stop on Private Calls or Interconnect Calls, or are these calls skipped, i.e. Uniden/Pro90/91 etc.?

The design out there using the MAX232 chip can be made on a perf board form under $15 and everything but the chip is easily purchased. The chip can be had from most mail order parts store or as a sample for free from Maxim.

I know that did answer you question but is is a simple circuit, powers off of the serial port.

George,

There was an incident within the last two years where a Broward county amateur operator (HAM) was stopped for a motor vehicle violation. When the police officer seen and heard his mobile radio he asked if it could receive police bands.

To make a long story short, the radio was confiscated, and the issue became big. An attorney had to be obtained. The radio stayed with Davie Police for a good while. Eventually the issue went to court. It was written up in QST magazine, a amateur radio publication.

As a licensed HAM operator I don't worry about confiscation, however one would be wise to be careful considering Florida law.

>What is the best antenna to monitor the 800-900 freq.
>Thanks in advance

A year or two ago Popular Electronics or some similar magazine printed an article about a "corner reflector" antenna. I was intrigued, but never got around to buying it or building it. If you lived on the edge of a metro area, as I do, you could build something like that and point it toward the city.

>track them.

The way I read the manual (pg 64), Open/Closed is assigned by bank.
So, for a given bank, if you want to scan only entered ID's, you mark
it as "Closed". If you want to scan all activity, you mark the bank as
"Open". So, how does what you said help me? I don't get it (yet). I
thought the idea was that while you might want to enter all the IDs
(say there were only two, "fire" and "police" - whatever those number
might be), but sometimes you might only want to listen to just "fire".
So you'd lock out "police".

Better check out www.strongsignals.net for Rich's preliminary info on the 94 (http://www.strongsignals.net/htm/newsflsh.htm#102299). It appears that you can't scan conventional and trunked at the same time with the 94. Kind of a bummer (if it's going to be an "all purpose" radio).

The 2006 has a higher master clock speed. and an additional IC in the
squelch.

The 2006A is idenntical to the 2006 with the exception of the light
switch. on the original 2006 it is a dimmer switch, on the 2006A it is
an on off switch.

That's about it.

1633. If Anyone Knows

Newsgroup: rec.radio.scanner
Date: 1999-10-23 00:00:00 UTC
From: David Gloag <dgloag@mediaone.net>
Message-ID: <M8bQ3.5423$Mt5.106116@news2.jacksonville.net>
Source record: 104263

I am trying to find out what would be the response for a patrol unit in Florida either Highway patrol or local Sheriff (actually trying for Jacksonville, but any might be O.K.). So for instance a call comes over the radio from a dispatcher for a possible speeder that a civilian called in about. Is this a code one? And the dispatcher wants someone in the vicinity to check it out. Is that something like 10-14? The real problem I am having is how would a patrol unit respond. All I can think of is something like: "1-Adam-12, we're on our way" like the TV show. Too corny. They only use that in LA and not Florida, right? Or do they use the patrolman's name like: "This is Williams, over, I'll check it out."
I am writing a story and it needs realism and accuracy. It's not about cops but I would like this info for a part of it to work.

Thanks in advance for any assistance,
David

According to his message it has only been 8 days sense they received it "I tracked the scanner back to Ft Worth where it was received on 10/14 at 11:00AM...It is now 10/22...". 22-14=8. 8 days.

I picked up a used RS Pro-46 at a garage sale. I have had difficulty with the local reception. I am able to get some frequencies like the city police (460 range) However, I can't get too much else that I have always been able to pick up including NOAA weather. It turns out my brother used to have one of these with the same problem. He never figured it out. Is this a common problem? Anything I can do?

Here is a solution for carrying all that information you wish you had at your fingertips when your traveling or even in the shack, and you don't even have to boot up the computer, its all there at the push of a button, such as, Important frequencies, Disposition codes, Frequency ranges, Medical terms used by ambulance crews, ect. And all the information is "SEARCHABLE" by keyword, if you don't remember what frequencies are used by your cities fire department, just enter "FIRE" and anything that was entered into the "QUICKPAD" with the word fire will pop up on the LCD screen or say your listening to your "TRUNKTRACKER" scanner and the talkgroup 26128 pops up on the screen but you don't remember who broadcasts on that talkgroup, just do a search with the "QUICKPAD", enter 26128 and up pops anything with 26128 in it. In my case that would be the "PDX Airport Police", or say you need to know the meaning of the radio code "12-18", type it in and up pops "Request Ambulance" The uses are endless. And its all portable and runs on (4) AA batteries. I have found this to be probably one of the BEST scanning accessories I've bought. You can do MUCH more with this, than I've mentioned. To learn more about the "QUICKPAD" go to the following and get even more information.

Quickpad Multi-functional All-In-One Keyboard & Organizer

Keep in mind that most medium to large cities use the bid process.
Therefor, they end up with low bidder unless the dept can prove that
the bid product is of such low quality that it can't do the job.

Motorola. It is simply the best. Next would be GE, EF Johnson, and
Kenwood. Vertex, a division of Yaesu, also makes quality commercial
radios but they're supposedly not as good as the ones I mentioned
first. If you want the best, go with Motorola. Now, if you're talking
about HAM radios that cover many bands you'd have to get a few
Motorola radios because they're usually not designed to cover wide
bandspreads.

With the new scanning receiver rules taking full effect on October 25,
1999 you are very likely to see lots of changes. You may even see
some products pulled from the market place.
The new rules state cellular telephone images must be 38 db down on
any frequency a scanning receiver can possibly receive.

Gary

Affirmative! Same as the BC245 without that ridiculous 4 second
delay. There is rumored to be a 2 second delay on EDACS systems.

About 6 months ago someone posted a really good list of frequencies and designations for freq's used by CDF and USFS. Could someone please repost this information.

I am particularly interested in mountain fires and fires in wilderness/unincorporated areas of Riverside and San Bernardino counties.

Thanks in advance!

In Sweden we use two older Ericsson systems, a country-wide 78-79 MHz with total Fire/Rescue/ambulance interoperability, and in the three major cities, a 410 MHz repeater supported system with optional encryption-enabled HTs (mostly only used ï¿½n drugs ops and national security) GSM is used for all other sensitive info.

Until you can get the list for freq-by-freq programming, here's a "formula," if you're familiar with binary numbers. It is from a Fidonet posting by Ted Hay in the Shortwave Echo that was posted in 1995.

The scanner has 16 channels with 16 LED lights representing them much like the old crystal scanners of the time. The scanner has an advertised frequency ranges of 30 - 50 MHz (VHF-Lo), 144 - 174 MHz (VHF-Hi), and 450 - 512 MHz (UHF-Lo/Hi). Mathematically, the scanner can be programmed for 10.745 - 51.700 MHz, 143.725 - 184.700 MHz, and 409.6625 - 512.050 MHz but will only tune well within the specified ranges. Since the scanner has NO frequency display so you have to be sure you set the switches correctly by verifying them manually.

BC101 is programmed via 16 switches and 2 channel progamming switches.
formla as follows:
L=10340-(f)(200)
H=36940-(f)(200)
U=40964-(f)(80)
1 4096
2 2048
3 1024
4 512
5 256
6 128
7 64
8 32
9 16
10 8
11 4
12 2
13 1
14 not H
15 not U
16 dly

where
L= low band 30-50Mhz
H= high band 146-174Mhz
U= UHF band 450-512Mhz
F= freq in Mhz
DL= delay
1 move ready switch down program lite comes on
2 move all 16 channel switchs down
3 manually step to channel to be programmed with Manuel/Scan switch

4 use formual to determine which switches need to be up
5 to add delay move switch 16 up
6 move enter switch down and release it, the channel lite will turn off for
a second (may need to make several attempts to get the data entered)
7 repeat steps 2-7 to program other channels
8 when thru programming move ready switch back up
9 the 16 switches now function as lockout switches

eg to program 162.400
162.400 is high band
H= 36940-(162.400)(200)=4460 4460 becomes the reference #
4460-4096=364 switch 1 goes up
364-256 =108 switch 5 goes up
108-64 = 44 switch 7 goes up
44-32=12 switch 8 goes up
12-8=4 swtich 10 goes up
4-4=0 switch 11 goes up
no remainder
switch 14 is not moved up 162.400 is H(igh)
switch 15 is moved up 162-400 is not U(HF)
switch 16 up if scan delay desired
move enter switch down to enter the frequency
in summary develope the reference # and then subtract highest switch # from
it and move tha switch up and with the remainder subtract the next highest
switch # and so forth
This may be somewhat confusing if you havent taken basic digital, or if you
have it should be fairly clear.

Gary, if you've been offended i apologize, that wasn't my intention. This newsgroup has had far to many flame wars over the years. The hobby has suffered from it to some degree i think.

Your right, Internet access to time standards are not new. This machine has been updating it's system clock via the Internet or direct dial to the Naval Observatory for years. The URL and the forwarded message did however point to a brand new Web based service.

Yes my name is Terry, Terry (Bert) Burland, aka N5TOA of Durant, OK 'now'. Some in this newsgroup may remember when i had the RF-BaKer Radio BBS, FidoNet node 1:19/24, when i was living in the Texas Panhandle way back when.

Durant, Oklahoma is one the few places having Cable Internet access by the way. http://www.netcommander.com/technology.htm if you want a look'see. I live in a rural area where cable is not available however, and use a normal dial-up from http://www.redriverok.com/. The fishing is great out at Lake Texoma this time of year, you should give it a try.

Have a good day, ok? :) Bert.

Source record: 104117

It does help. It actually helps to make things a lot more confusing even
though I feel that I think I understand a little more about it. I listened
to a couple of scanners on the web through real audio and found that the
talk can be very different depending on the part of the country you listen
to. I listened to LA for a while and they use nothing but 10 codes and
"number" talk. Had to keep checking my list of codes to see what the heck
they were talking about. I tuned in later to NY city and found after an
hour that beside using only the familiar 10-4, they just used plain talk, no
numbers or codes. Don't know why they are different. I tried to get some
idea of a Florida agency, but the Miami link was down. I'll check it out
later.
Thanks for the input.
David

1703. HELP? Single Mobile Antenna or Two Needed?

Newsgroup: rec.radio.scanner
Date: 1999-10-24 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s178nkp5gbb25@freenews.remarq.com>
Source record: 104129
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

I am acquiring an Alinco DJ580T 2/440 HT with scanning
capabilities down to 33mHz and up to 470 and even 800mHz.

I am also trying to acquire a Uniden BC-245XLT scanner.
The Uniden will be the primary 33-47 and 151-155 mHz monitoring
and 800 mHz trunktracking scanner. The HT will primarily be used
on 2 & 440.

Is there a single antenna that can handle such ranges (with
an emphasis on 2 and 440) and that is a mag mount? Or do I
need two separate mobile antennas?

I am guessing some sort of scanner antenna that can also
handle TX power up to 50-80 watts (I have a small mobile amp.
for 2m) might work.

Either of these two recently posted antennas suitable?
Diamond Mobile Antenna Model CR320A 2/440
Infoman 50-512mhz Scanner antenna

Thanks & 73, DavidC K1YP

1704. PRO-2026 800MHz mod???????

Newsgroup: rec.radio.scanner
Date: 1999-10-24 00:00:00 UTC
From: Don Parker <tazman@cswnet.com>
Message-ID: <3813C114.217C26AD@cswnet.com>
Source record: 104130

Just purchased a "new, bought but never used, in the box" PRO-2026 and need to know how to open up the cell freq's. I'm a tech by trade (repair monitors) with a full service bench, so all I need are some good instructions and/or schematic. Would greatly appreciate any good info. Already have a Yupi 7100, but would like this for back-up. Plus hoping the display will be easier to read (haven't received it yet) than the Yupi's - get tired of having to punch the damn light button if it's not bright enough in the room to see.

Thanks in advance!

Don

I do see a lot of potential for missed traffic if I attempt to scan this
many big systems at the same time, especially during busy periods. I'm
primarily interested in scanning the following (at the same time):

About four talkgroups on a 7 channel Smartnet system
About four talkgroups on a 15 channel Smartnet system
About four talkgroups on a 10 channel LTR system
About two talkgroups on a 5 channel Smartnet system
and about 20 conventional channels

...roughly 70 channels that need to be scanned

> In general, given that the scanner has decoded an ID, it will not take a
> significant amount of time to search all the scan lists to see if it's
> there.

Hopefully! From the description of how fast it will produce the
CTCSS/DPL/Talkgroup info when searching and encountering traffic (I've read
that it's "instantly") it sounds like the radio is very fast at determining
what the current talkgroup (or PL/DPL/EJF) is.

> From here much depends on how the radio's search algorithms work. When the

the
> scanner also searches through any conventional frequencies, well it
> probably wouldn't be pretty.

I wouldn't count on the radio being smart enough to properly incorporate a
"smart trunking delay" when scanning trunked systems. So far it looks like

we're stuck with repeater hang time. If the reply doesn't come during hang time, the radio probably resumes normal sequential scanning. EFJ and some Motorola systems are transmission trunked, so unless there is a "smart trunking delay" built into the software, it is likely that replies will be missed on these type systems.

Your idea is good though, and who knows, perhaps the designers were smart enough to figure this out. It will be interesting to see what fuction, if any, the DELAY mode has on the trunking modes.

I'm beginning to think that this radio certainly won't be everything to everybody, but it still sounds like a nice product. I'm sure that I'll still have a lot of applications for my 895, especially now that I've added the Winscan software. Winscan does a really nice job of getting the 895 to scan multiple trunked systems and conventional channels at the same time.

In that case, go to Ebay and seach the closed auctions for "PRO-43":

http://pages.ebay.com/search/items/search.html#CompletedSearch

One received bids as high as $177.55 but the reserve was not met.
Another one sold for $182.50

One still up for bid is already up to $200.00.

Good luck.

Hello,

I use Gornan Vlaski's software to up load and download information to my IC-Q7a. It works great! If the out of band transmit modification is performed on the IC-Q7a, will his software still work for uploads and downloads? I have heard rumors that if you perform this mod, it disables this feature. True or not?

Thanks,

Jim....

> >
>

That's correct. First, cellular monitoring was outlawed, then cordless phones were added to the list, although all new scanners continue to include the cordless frequencies. Only in America. You can tune to the cordless frequencies but it's illegal to listen in.
Spread Spectrum cordless phones can't be monitored by current scanners if both the base unit and the hand unit operates in spread spectrum. But, I heard that a certain Panasonic cordless operates in S.S. from the base unit and analog from the handset, so you can monitor one side of the conversation. So, if you want a spread spectrum cordless, make sure the S.S. operates from both the base unit and the handset.

Assuming the radio is working, a good rule of thumb for reliable range at VHF and above is:

(Square root of the height of the antenna in feet)= range in miles. But, you have to add the height range of BOTH end antennas. Yours, handheld, at maybe 5 feet, gets you 2.23 miles. The airplane, at 1000 feet, gets you 31.6 miles. Range, handheld, to an aircraft at 1000 feet is thus 33+ miles.

REAL range may be as much as double this, it's a rule of thumb for GOOD, reliable communications possible.

Of course, the radios on the ground at the airport are NOT at much height, and they are also optimised, generally, to radiate more upwards than antennas intended for ground-to-ground coms, so your range to be able to hear the local airport tower isn't much. You should hear the aircraft, though.

From the Electra BC 12 instruction manual:

BC 12 BAND PROGRAMMING

"Your Bearcat 12 may be programmed for single band operation (Low,
High (and Ham), Ultra High (and U/T), dual band operation (any combination
of two band groups) or five band operation. This is done by the proper
positioning of the red and/or white bandswitching probes over an appropriate
channel. Follow all instructions with the radio on its top and facing away
from you.

Single Band Operation (Low, High or Ultra High Groups)

1. Low Band (30-50MHz): Leave bandswitch probes connected to their
posts .... Then, install crystals in any order desired.
2. Ham (146-148MHz) and High Band (148-174MHz): Slide the red band-
switch probe over the post at Channel 1. Install crystals in any order
desired. White bandswitch probe is not moved from its original position..
3. UHF and T Bands (450-512MHz): Slide the white bandswitch probe
over the post at Channel 1. Install crystals in any order desired. Red
bandswitch probe is left connected to its post.
Low/High (and Ham) Band Operation L/H ...

1 Install low band crystals first starting with Channel #1 until all low
band crystals have been installed.
2. Install high band or ham band crystals in the remaining channels.
3. Slide the red bandswitch probe over the post at the first high band
channel. All successive channels will automatically be high band chan-
nels. Example: You want two crystals in the low-band and eight crystals
in the high-band.
Insert the low-band crystals in channels one and two.
Insert the high-band crystals in the eight remaining.
Place the red bandswitching probe over the post adjacent to
Channel 3 (where the high-band starts). Leave white probe on its
stored post.

High (and Ham)/Ultra High (and T) Band Operation

1 Slide the red bandswitch probe over the post of Channel 1
2. Install the high band crystals beginning with Channel 1 until all high band crystals have been installed
3 Place the white bandswitching probe over the post of the first U Band Channel. From that point, all successive channels will automatically be U-Band and T-band channels. Insert your UHF crystals in these positions

Low/Ultra High (and T) Band Operation

1. Place the white bandswitching probe over the first channel (from left to right) you wish to be UHF. All channels to the left of the white band-switching probe will be Low band and the channels below and to the right of the white bandswitching probe will be U-Band and 1-Band. In-stall Low Band and U-Band crystals accordingly. Leave red probe on its stored post.
Low/High (and Ham)/Ultra High (and T) Band Operation L/H/U/T:

1. Install low band crystals first, starting with Channel 1.
2. Slide the red bandswitch probe over the first high band channel. All successive channels will be in the high band.
3. Install the desired number of high band crystals.
4. Slide the UHF band white bandswitching probe over the post of the first channel you desire to be programmed for UHF. All successive channels will be in the UHF and T bands. Install the desired UHF or I band crystals. For example, ... we wish to have two crystals in the low-band, three crystals in the high-band, and five crystals in the UHF and I band. Insert the low band crystals in Channels 1 and 2. Place the red bandswitch probe on the post over Channel 3. Install the high band crystals in positions 3, 4 and 5. Place the white bandswitch probe on the post over Channel 6. Install the UHF and I crystals in positions 6, 7, 8, 9 and 10. Ihis completes the installation of crystals for five-band operation.

Correct Crystals

Your Bearcat Receiver will operate only on crystals designed for it. Ihe I-F frequency of your scanning receiver is 10.8MHz. Be sure to specify crystals for a 10.8MHz I-F when purchasing crystals for your scanner. Rigid quality standards are applied to crystals furnished by Electra Company to assure full performance; therefore, our warranty does not include correcting poor operation caused by crystals from other sources. Ihe VHF-high alignment spread is 146MHz to 174MHz and the VHF-Low 33MHz to 48MHz and the UHF alignment from 450 to 512MHz. New frequencies may be added within these spreads....."

OK, I spent some more time at the Bandercom site. I was confused
because the picture they have of the MkII is of a black unit. However
it says in the list of features "silver case". Sorry for the
confusion.

1732. Scan Delay on AOR AR8200

Newsgroup: rec.radio.scanner
Date: 1999-10-24 00:00:00 UTC
From: jeff.adams@gsc.gte.com
Message-ID: <38137ce8.27907278@wlbr.iipo.gtegsc.com>
Source record: 104206
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have downloaded the manual but I can't figure this out: It appears that there is no way to have the scanner scanning and have one bank with scan delay and another bank without scan delay. When scanning the CHP, I don't want scan delay (they use a different freq for mobile and base). But for most everything else I DO want scan delay. Can the AR8200 do this, or, is delay either globally ON or OFF? Why the heck can't anyone build a wide-band handheld that has per-channel scan delay?

Also, I didn't see any kind of memory management functions, like, say, deleting blank channels and compacting all the non-blank entries together. Or inserting a channel (e.g., I have just found a new frequency for San Jose Police departments [it's not new, but I'm just getting around to adding it], but in order to add this one new frequency, I have to go in and manually move all the frequencies above the SJ PD freq's in order to make room for this new SJ PD freq.). Does anyone know if there's a new software version coming? If so, would it be field installable (i.e., does the 8200 have flash EPROM)?

Bob,

Some pretty good questions. Here are some numbers to consider: The subaudible handshake signal is sent at 150 Baud. Talk group information there is only 11 bits wide. At 150 Baud it takes 6.67 ms to transmit a single bit. Since the scanner samples the voice channel asynchronously it generally won't start sampling right at the 1st bit of the ID. The worst case number of bits required to be sampled would be 21 and the best case would be 11, so on average it will have to sample 16 bits. Therefore the total time spent looking for a talk group ID per channel is about 106.7 ms. And that's ignoring any framing or synchronization bits which may be present which would makes things take even longer.

Consider tracking five 21 channel systems at busy hour. Assume 80% loading and there will be 80 voice channels in use at one time. Assume the scanner is smart enough not to stop on a voice channel if there's no carrier and that the time required to determine that is insignificant. On average it will take 8.5 seconds to look at all 80 active channels.

In general, given that the scanner has decoded an ID, it will not take a significant amount of time to search all the scan lists to see if it's there.

From here much depends on how the radio's search algorithms work. When the radio is looking for the reply to a previous transmission (delay on) you would hope that the radio is smart enough to only look within the system from which the ID came, (but I doubt it from what I've heard). If so, then the worst case time to find the reply to an ID in a 21 channel system at 80% loading would be 1.7 seconds. And the average time would be about 0.8 seconds. On the other hand, if the scanner searches all five of the systems, the worst case time is going to be around 8.5 seconds with the average at about 4.3 seconds. That would be a lot of missed replies. If the scanner also searches through any conventional frequencies, well it probably wouldn't be pretty.

Greg Knox

Greg there are many issues regarding the PRO 92 compared to the competeing Uniden technology.
Your post just highlights still another one.

The bottom line is that this radio is apparently a SLOW 25 CPS single receiver compared to the dual receivers in the front end of the Uniden 100 CPS product. I suspect that for now with many TRS in the USA being on the small size with very few talkgroups that this radio will be adaquate for many users. But when you are near a major metro area like Atlanta GA with heavily loaded trunking radio systems with hundreds of talkgroup ids a user would miss a lot of the conversations. I suspect that they would not be aware of what they are missing unless they listened carefully or had another radio to compare the PRO 92 against.

One can look at the 4phun-radio@onelist.com archives to see other caveats if one were considering spending money on the PRO 92. My suggestion to any who would consider this radio is to buy it from a local radio shack and check the current return options BEFORE handing over your cash or credit card. The last I heard RS had a 30 day return policy. That should be ample time to give any alert user the time to see if they can live with the idiosyncrasies of the PRO 92.

I personally suspect I could not live with this radio but I am willing to give it a try to see if alpha tags are all that compelling. I may wait for an alpha tag version from Uniden before I would consider a alpha tag version of a trunking scanner.

The PRO 92 would take 500c at 25cps or 20 seconds to scan all channels one time verses a mere 10 seconds for a radio that scans 1000c at 100cps.

Dual receivers? Where did you get that idea? There is only one receiver
in the 245. See patent 5956648 for more info.

Re-inventing the wheel, with a twist. the site doesn`t have many (or any ) frequencies on it !. As far as "web ring" setups, do you really think people are going to go to all THAT trouble ? There must be 20 or 30 "Web Rings" about scanners operating out there, with frequency listings already on them, that don`t require the kind of monkey shines you describe to access them.
BigB <bigb7@ahoo.com> wrote in message news:7upprmfja1@news.inquo.net...

Hi,

The delay is global. Although you can store 9 delay profiles.
Software inside 8200 is not upgradable. (no flash).

The EEprom where mem/search data is stored supports backup/restore through
the serial port. But this is not the firmware just your data!!!

For you convenience we have developed a software package dedicated to the
Ar8200 for easy memory management and much, much more. It supports sorting,
inserting, and more (software is developed together with over 300 registered
AR8200 users worldwide).

You can visit our site at http://www.butel.nl for a demo and info.

If contains software and additional info about this product.

Regards,

Gommert

I use the scanner in an airplane every day. I pickup stuff from close
to 100 miles away aome times. It's all a matter of transmitter power
and terrestrial obstruction or line-of-sight.

I do agree on the rule of thumb on the ground but don't be surprised
if the results are much better in the air.

The PRO-92 supports one list (of up to 100 talk groups) associated
with each bank. It needs to search only the talk group
list associated with the current bank after decoding an ID.

Bob,

Right, I just meant that compared to the amount of time required to decode the talk group ID, the amount of time required to actually search the radio's scan list for it is not enough to make a difference.

Greg Knox

Let me get this straight. You want scanner hobbyists to apply for a job wherein they would contribute to the world-wide demise of the scanning hobby? Fat chance!

Its not a trunked system, I checked both of the their licences. It is a regular system. I guess the concensus seems to be that it is some kind of encoding that lets them share a frequency.

"Trunking" allows multiple users of the same group of frequencies in the same area. For your next lesson, young Grasshopper, you will make a pilgrimage to Rich Wells' Strong Signals Resource Page to read up on trunking and how to deal with it.

Good listening,
Charley_Harp@alum.calberkeley.org

I don't believe this is a case of trunking. I have looked up both licensees
and found they don't seem to be trunked. Plus it would be a bit unusual for
two completely unrelated private entities to use a common trunked system.

>it? Is there a way to break the new digital cell down to analog?
> Brenda
>
>
By "Receive and Read Satellite signals", if you mean either the LowEarthOrbit
NOAA APT or ham LEO sats then yes. I first received NOAA APT images on
my (then brand new) Pro2004. The 2006 is just a newwer, smaller version of
the same basic radio. I used the infamos RS diskcone and was amazed to
receive anything at all. To do it right one really needs better gear, but it
is a starting point. Every improvement that I made, add a preamp at the
radio, move it to at the antenna, build a better antenna, add a narrower
IF strip all imprved the image and the distance. But with a stock
2004/5/6, a copy of Christian Bocks WXSat, and a 486DX2(with sound card)
you can get amazingly good pictures sat pictures for free.
Put the 2006 in the wide FM mode (you really need 45-50KHZ instead of 150 but
it is better too wide then too narrow!), program in 137.620 and listen from
3:00 in the afternoon until 10:00 at night.
IF you want to eliminate some of the uncertainty, get a sat tracking program,
download a current sat tracking elements and you can predict to withen
seconds when a signal will pop up. There might even be web sites that will
allow you to input your loctation and tell you whant "birds" are sisable and
when.
As for receiving ham sats, not hard, but unless you already have a data
decoder you will not hear much but some digital noise.
As for receiving digital cell phones on the 2006, I would guess that someone,
womewhere has coupled apower full pc to a "normal" receiver and decoded it,
but there are better ways to waste your time. If we have to ask "How?" we
do not know enouhg to impliment it even if we are told. As an example I have
a frined who desigend and built a TACAN reader. While he was willing to
share his secrets, they are so complex that it is noise to me. I have seen
the "right" way to decode TACN and it makes since, but to bit slice on a PC,
and then stricng the data together so it makes sense is beyind my poor brain.

Well.. I dunno. I mentioned in the post I've got a Pro-90 (trunk tracker), however I have no indication from any databases that this might be a case of trunking. However I should probably not rule it out. I don't think it is a trunked system because the Frequency database lists pairs for both of the frequencies I listed, the FCC database shows a mobile and a base transmitter pair. 856.2125, 811.2125, 856.1625, 811.1625

>wait till the first sale maybe :)

I reply:

The manual for the PRO-92 states that alpha labels can be assigned for
standard scanner frequencies as well as for trunking scan ID's.

However, I will not be purchasing one of these scanners quite yet.
Although it has a lot of extremely cool features, it is going to be
almost useless for trunking since you cannot subdivide a trunking
system into scanning lists. The Uniden 245 allows you to have up to
10 subdivided scanning lists per trunked system.

For example, let's say my city has a Motorola trunking system which
the police, fire, animal control, ambulance, and public works systems
all share. On the Uniden 245, I program the frequencies for this
trunking system into a single bank on my scanner. Then, I can program
the police ID's into trunking scan list 1, the fire into trunking scan
list 2, the animal control into trunking scan list 3 etc etc. If I
only want to listen to animal control traffic, I simply select
trunking scan list 3 and deselect the other 9 scanlists.

The PRO-92 on the other hand doesn't have the concept of trunking scan
lists. All of the trunking ID's are grouped together into one mass.
Thus, you can't really "just" listen to the police or fire or animal
control. You'd have to listen to all the services at once. Thus,
IMHO, the PRO-92 is useless for trunking.

1781. Do any scanners - display alpha tags for channel names or trunk group names?

I'm not sure you are strictly correct. I think you can lock out any
IDs you don't want to hear, listening to what you want to hear ...
but, you are correct that scan lists per se aren't implemented. The
scanner is hardly "useless", in my opinion, since you can listen to
multiple systems, trunked and conventional, including differing trunk
types. You have alpha labels, a great advantage and you can lock out
trunk IDs you don't want to listen to.

in any case, different strokes for different folks..

More than likely these users are sharing the same frequency, but keep from hearing each other by the use of CTCSS, or as better known, PL. This allows the users to only hear radios which are transmitting the same PL as they are set to recieve

You're right, this is a poor design. I still have to have one! I just hope it is available before hell freezes over. I notice no one bothers to try to find out the release date anymore. I think that peak interest has come and gone.

Maybe they don't have a license.

On the other hand, maybe they do, and you aren't looking in the right
part of the database. Since you didn't mention the frequencies
involved, I have no way of telling for sure.

If the frequency in question is 155.880, it *is* listed in the FCC
database. If it's something else, post the frequencies and I'll try to
give you a better answer based on better information.

It is a common practice for several businesses to share a frequency on a conventional non trunked system, especially in large metropolitan areas. After all, there are only so many frequencies to go around. They are somtimes referred to as "community repeaters".

From: "David M. Hitchner" <nospam@trash.net>
Message-ID: <7v341ifmv1@bgtnsc03.worldnet.att.net>
Source record: 104028

Some of the down side.

1. Only 6 channels per second scanning speed.

2. There is no way to scan selected multiple banks at a time. It's either
one or
all banks.

3. Scanning functions are difficult to use compared to other scanners.

Otherwise the R-10 is an excellent scanner. The small size and computer
interface are a plus.

Source record: 104032

Sure. A PRO-2035 or PRO-2042 equipped with an older version
OS535 board can be unlocked by entering a well known code.

Or you can buy a PRO-2004, 2005, or 2006, and install a CE-232
interface, an Opto interface, or a PROgramit interface.

Of course actually listening to cell calls would be illegal... ;-)

From: Charlie Rabley <collie@bright.net>
Message-ID: <38152617.3182C0DE@bright.net>
Source record: 104033

I recently came across a used TRX-100XLT (a nice little rig!). The manual is very detailed of the wiring of the cloning cable, but only mentions in general that the scanner can be PC controlled.

Does anyone know the pinout configuration of the cable?

I've found the download site for the software and would like to try it with the scanner.

Thanks!

...Charlie Rabley

>
> --
> =]) Sooung

well, it's like this.

no, it's like
this.

this is a symbolical thought above....reflect and understand.
based on the idea you put forth the second stanza is your
police dept.

You see, Lafayette has no police dept. They are the CoCo
County Sheriff Dept...but when you see their cars they have
Lafayette on it...they have a couple tac channels, but they are
the CoCo County Sheriff dept.

Lafayette has no fire dept. But it's on their engines/trucks
and power wagons...etc.

Same: they are part of the big picture: Co Co Consolidated.

Now...should Lafayette secede from the county, then
they will be assigned the old freq's they used to have.

But now with digital almost certain for Co Co County
Police and Fire, it will eventually be a TT....now,
all you need is Motorolla system or EDACS....the
question of the hour.

Orinda is the same. they also have a couple tac
channels...car to car, etc. they work off Clemars.
They work off co co's common and a few bits
more of the other's systems.

dat surfin haole

etc.

Check out the Uniden web site. They sell some refurbished scanners there
and the prices are quite good. I bought mine there and have been happy
with it.

The radio must be in normal scan mode (not bank scan mode). To put it in normal scan mode, hit <manual> then <scan>. You can lock out (or unlock) any channel by punching in its 2-digit channel number while the radio is scanning.

>need to know how to open up the cell freq's. I'm a tech by trade

If it's a new model, you're out of luck. If it's an older model,
here's how to do it:

a) Remove four side screws from bottom cover. Remove bottom cover.
b) Looking from the front of the radio with the bottom side
exposed, look on the small circuit board at lower right and find
jumper L201. Cut it.
c) Reassemble the radio.

1821. Re: Florida Scanner Law

Source record: 104049

For a good page that lists what I assume to be update scanner laws, visit this website at: http://www.afn.org/~afn09444/scanlaws/ there is a link there to scanner laws. According to what they have posted, the only place in the US that possession of a scanner is illegal is in Washington DC. In addition there are 12 states that limit the use of a scanner. Out of those 12, 5 state that it is only illegal to use a scanner in connection with a crime (break into a store and listen for police to be dispatched..). New York requires you to have a permit to carry a scanner. The other states that limit the usage have various requirements, such as a ham radio license, reporter, special permit, etc... but in a nutshell, it is perfectly legal in 38 states to carry a scanner around or have one in your car. If the police take you scanner and your state doesn't have a law about it, ask to see the law.

Remember, knowledge is your key. These are the laws that police are usually not aware of. The majority of cops will just tell you that it's illegal to use a scanner in your car because they don't know better. If your state restricts the usage and you can tell them something like "The use of a scanner in a motor vehicle is restricted to reporters on assignement, ham radio operators and volunteer fire/rescue personell", that will throw them for a loop.

And just for your knowledge, this is what the website says about Florida's law:

{Scanners are] Illegal mounted in vehicles unless you are either a licensed alarm system contractor, member of Press ON ASSIGNMENT (*note* that), licensed amateur radio operator [take note of this section! Another reason to keep your license on you!], or citizen with written permission from Chief of Police of Sheriff of your community. [and if it gives you a warm fuzzy, go to your local chief of police or sheriff and get that written permission - imagine the cop's face when you pull that out!]

OK, so, this means that I can't effectively search standard channels
(where both sides of the transmission are on the same frequency) and
California Highway Patrol (CHP) where the base is on one frequency and
the mobiles are on another.

This is pretty stunning for such an expensive radio. I guess, in it's
defense, the Yupi is the same way.

>Software inside 8200 is not upgradable. (no flash).

Not good for such an expensive product. What has been the factory's
history? Has there been upgraded software since the initial release?
If so, can an owner get there radio upgraded?

This would be a little drastic, but you could have your name legally changed to, for instance, "Joe Shack". You can not be legally prevented from using your own name in a business title, even if it is in conflict with a copyright.

And by the way, it is true that Tandy took the large auto parts chain, formerly known as Auto Shack to court. They are now called Auto Zone.

It is asinine that our court system would roll over, and allow individual words in a trademark, which are in common usage in our language, to be protected like this...especially when the business is entirely different...such as auto parts or pizzas, or anything else unrelated to electronics!

Greetings guys, Pappy, Burt, others..

I WILL say.. one of the biggest problems with the news groups is it's difficult to interpret the intention of the individual whose writing a comment. Was it meant as a derogatory, sarcastic, disgusted comment or conversely (in reality) a pleasant, upbeat or otherwise amusing comment? It can all too often be very difficult [at best] to really tell. This is further compounded by the fact that not everyone is writing in a necessarily consistent manner. Personally, I think it may have to do with their education and experience in writing - but we won't delve into that now. So, guys, nothing here was said, nor meant in a derogatory or sarcastic manner. In fact, I WILL say that after too many years of my nose being in the various news groups, I'm just amused at this point.. I suppose that I'm reaching an age where this just doesn't matter as much as it used to, But I DO enjoy the humor from time to time and REALLY appreciate someone taking the time to help the masses - I think that may very well have been the original intent behind starting the *news* groups. Of course, I DO get a BIG kick out of the individuals that speak (write) in a authoritative manner to eventually find out that they've got no formal training, education and little experience in the area in which they preach. You know, the John C. Dvorak types.. Reminds me of the one recent posting where the guy claimed to have an MBA in Computers.

Cheers,
Gary

When seeing a Technician class licensee (or Tech. plus now-a-days). I tend to want to keep them going towards ultimately upgrading that license. The smile on their face (which I've witnessed) once they finally upgrade is priceless. And so is the lifetime certificate issued by the FCC indicating new privileges to be explored.

Gary, if you've been offended i apologize, that wasn't my intention.
This
newsgroup has had far to many flame wars over the years. The hobby
has
suffered from it to some degree i think.

Your right, Internet access to time standards are not new. This machine
has been updating it's system clock via the Internet or direct dial to the
Naval Observatory for years. The URL and the forwarded message did however
point to a brand new Web based service.

Yes my name is Terry, Terry (Bert) Burland, aka N5TOA of Durant, OK 'now'.
Some in this newsgroup may remember when i had the RF-BaKer Radio BBS,
FidoNet node 1:19/24, when i was living in the Texas Panhandle way back
when.

Durant, Oklahoma is one the few places having Cable Internet access by the
way. http://www.netcommander.com/technology.htm if you want a look'see. I
live in a rural area where cable is not available however, and use a normal
dial-up from http://www.redriverok.com/. The fishing is great out at Lake
Texoma this time of year, you should give it a try.

Have a good day, ok? :) Bert.

Greetings Saso..

One thing that isn't mentioned is whether your attempting this reception here in the USA. Folks tend to assume this however, this may not be the case. IF it is, tune around the 120 - 124 MHz region in AM mode slowly and I'm willing to bet that you'll eventually come across something in your area. Even if it's only the aircraft side of the communication you should be able to hear activity. Often, above this are the airlines and approach frequencies, but you'll hear [typically] more *local* activity in the 120 to 124 MHz region. If you can, put the upper frequency in one memory bank and the lower frequency in another bank and let the scanner do all the work!

Cheers,
Gary

This is interesting, I used to know a Saso many years ago.. oh well..

Uh, Gary, he did specify listening to 118-137 MHz. No assumptions to make. Even so, the civilian aviation band is a world-side standard, otherwise the US Navy would shoot down Iranian airliners more often.

If I were to tune through 120-124 slowly (say, pressing one 5Khz step every 10 seconds) it would take about two hours to complete a pass. That's why scanners offer the band scan feature, and they do it very well. Lastly, if you look up the frequencies used by your nearby airport, you'll find some that are rarely used, but when they are, it's good stuff.

Good listening, all,
Charley_Harp@alum.calberkeley.org

Hey folks,
Some of you might remember that I asked if anyone knew the frequecies for Case Western Reserve University in Cleveland Ohio several months ago. Well, at the time, the best anyone was able to help me was point me to the Percon and FCC databases. There I found a bunch of frequencies and in particular on the FCC database I found the freqencies I was looking for.

However once I programed my trusty Radio Shack Pro-90 to 856.2125which is where the campus security is supposed to be, and 856.1625 (where University circle police are supposed to be) I kept hearing about "pickups" and "deliveries". After several minutes of interested listening wondering why the signal was so weak even though I was 2 feet from the transmitter, I realized I was not getting campus security, but rather a local package delivery company.
So I went into the percon database and searched Cuyahoga county (the county Cleveland is in) for 856.1625 and 856.2125 and sure enough the frequencys come back to the university security and University Circle police, but both ALSO come back to "Bonnie Speed Delivery INc."

Now.. did the FCC make a mistake and place the two transmitters literally on top of one another? Or do I have my scanner set to a sensitivity to high and I am picking up transmissions not meant to break my squelch, and campus police are just not talking? Or am I missing some scanning trick?

If anyone has any ideas, please let me know.

- Andreas Mueller

There are many instances of several users being assigned the same frequency
in the same area. Often they use PLs (or more modern digital signals) to
open the squelch on "their" mobiles. On most mobile the radio usquelches
when you pick up the microphone so you can tell if you have a clear channel.
Localy (Lexington KY)on private university shares it security frequency with
several other users.
We even have several private secruity/alarm companies that share a frequency.

>If it sold for 229 dollar's at radio shack, how
>did he get ripped off by paying 95 dollars?

I wouldn't necessarily say he got ripped off. A few weeks ago (when I bought mine) they were on clearance for half price...$114. I bought one, but returned it due to internal noise problems. I purchased the BC895XLT instead.

$95 is a good price if it looks and functions like new, as long as it came with everything, including the manual. Personally, I would have probably paid the extra $20 and actually bought a new one...

1854. Realistic PRO-54 Patrolman Scanner

Newsgroup: rec.radio.scanner
Date: 1999-10-25 00:00:00 UTC
From: "Barry A. Waters" <barryw@cmsopen.com>
Message-ID: <7v20sfolg1@server.cntfl.com>
Source record: 104082

A friend of mine unearthed one of these the other day and was wondering if he should throw it out or not. He's not into scanning but thought if he could get the NWS weather broadcasts in may be worth keeping around. We turned it on and played with it for a bit but got nothing.

We have no idea how to operate it. There's no tuning knob or indicator that we can see, just a row of eight switchs across the top. It appears to use up to eight crsytals. We haven't opened it up yet to see if they are there, but could this be an eight-frequency scanner where you have to have a dedicated crystal for each frequency you wish to monitor?

Sure would like to find info on this as the owners manual is missing. Thanks in advance for any help!

Gary , I also have a 2050 and its OK, but Uniden and Radio Shack are both coming out with scanners that can interface with your computer. The Bearcat BC245xlt can to it (handheld) and Radio Shacks Pro 2052 can also(due out Nov 15) Uniden is coming out next Spring with a BC780XLt which will also. Radio Shack also has a new hand-held Pro92 hand held which can plus it has alpha-numerics, can scan Motorola/GE/Erickkson and Uniden and unlike the 2050 all these can Scan both trunked and conventional at the same time. Still the Pro2050 is decent, I will keep mine when I upgrade and use as a Secondary Scanner.

FCC rules provide that a 800 MHz frequency can be "shared" in not fully
loaded.
(ie 70 or mobiles).
If the first applicant licensed only 45 mobiles and any subsequent
applicat applies
for the same frequency within 75 miles they can apply for the remaining
25 mobiles.
Check the mobile loading and see if that is the case. (No pun intended).
See if you can program a unique tone decode in your scanner and not hear
the
delivery service (PL Decode).

Sorry for the mispellings in my earlier post on this topic.
For those at the bottom of a cave, away from all news sources a Learjet
took off from Miami Fl this morning. The plane lost radio contact
shortly after take off. While it was on a flight plan to Dallas Tx, the plan
went much more north and ended up in SD. I was hoping that a scanner
buff in the Nb/SD area could intercept the radio caoms of the AF chase planes
(2 F16s). Windows were reported as frosted up and no sign of life on board.
Guesses now center around loss of cabin preasure, and resulting hypoxia.
I was hoping to find out what freqs the AF uses for such interceptions.

1862. Re: HELP? Single Mobile Antenna or Two Needed?

Newsgroup: rec.radio.scanner
Date: 1999-10-25 00:00:00 UTC
From: Dick Elliott <elliottk@netusa1.net>
Message-ID: <7v27fs$ht6$1@news.netusa1.net>
Source record: 104090
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

Hello David. N9IPA here. Name is Dick Elliott. I have been a Ham since 1987. Before that I was heaving into scanning. Antennas for listening at that time was always my concern. Since 1974 I have tried several commercial antennas for my car and for my home. Of course as with any vertical antenna height is important. With a mobile set up height is important also. How high is high on a car. about 15 foot. but to look good stick with the diamonds you mentioned. I have one diamond, a dual band, for my FT8100R, I use my first mobile antenna, a hustler 2m 5/8 w for scanning in the car. Works great on all bands. Do not fall for the company that says more db gain.......for listening......all you need is a 1/4 wave. I prefer my 2m 5/8 w because during storm watch I can use it for a back up on 2m. Right now my BC245xlt is using an 800mhz cellphone antenna for listening. when I go into Canada I hook up a big bag phone because the big bag phones work better in Canada than the pocket cell phones. Over the years I have experimented with all sorts of "listening" antennas for my scanners. I have used a paper clip and found that local transmissions were good for about 10 miles. I have used a paper clip attached to a coax and ran it up to the attic.............can not tell the difference between that paper clip and a quarter wave mag-mount on the duct runs.........for listening and for 2m/70cm use during storms. I used two scanners and heard the same traffic on each unit at the same time. I heard surrounding counties with no problem......so save your money for the shack scanners use some coat hangers and a bnc connector and make your own listening antennas, and put a good one on the car. You will be happy.......73....Dick Elliott.........

1863. Is It Possible?

Newsgroup: rec.radio.scanner
Date: 1999-10-25 00:00:00 UTC
From: Brenda Moberg <bmoberg@telusplanet.net>
Message-ID: <4u1R3.8721$G6.778794@news0.telusplanet.net>
Source record: 104091

I am new to this Newsletter, and just found it.
Is it possible to Receive and Read Satallite signals with a scanner, as an example a Realistic 2006 Scanner? If not, is there a scanner that will do it? Is there a way to break the new digital cell down to analog?
Brenda

Source record: 103901

For Sale: Motorola CP-1250 Alphanumeric Pager, with Manual and Warranty

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=186182611

For active people with too much to do and too little time, Motorola gives you a dependable and stylish big screen word message pager so you can get things done with ease. The Motorola CP1250 combines advanced "Big Screen" technology with a premium feature set. The CP1250 can display up to eight lines of text and up to 26 characters per line. It is so powerful that it can even receive and display graphics, such as logos, charts and graphs. The CP1250 supports Motorola's FLEXTM Information Services Protocol to receive and display large quantities of Information Service messages in an easy to read manner. The user-friendly Message Management features allow stored messages to be moved into one of five relevant folders, such as 'task list' and 'phone list'. The 8-line to 4-line zoom control serves to further enhance its overall ease of use.

Get a complete list of features from Motorola's Website at:
http://www.mot.com/MIMS/MSPG/Products/Alpha/CP1250/features.html

This pager is in excellent shape (10 out of 10 cosmetically) and is almost brand new. I've just been given a new phone through work and no longer need it. It comes with original manuals and an insurance plan through Motorola for free replacement if pager's damaged. This pager is worth over $180! Reserve price is VERY reasonable... Please email with any questions. Good luck, and thanks for looking!

Yup! I found no useful content on that crappy website.

I guess a registered monitor or scanner or whatever the hell he
is one of 3 things.

1) he's to stupid or lazy to take the ham exams

2) he thinks he's an udercover kinda "007" type dude.... and being
registered
kinda authenticates this in his mind...

3) He thinks showing his registration patch on his roebucks jeans will help
him
pickup little boys.....

>mike armendariz

Any scanner or receiver covering 902 mHz
to 928 mHz will "tap into the 900 band".

To do so for analog cordless phone conversations is a violation of
federal (U.S.A.) law. There is no consumer equipment available to
"descramble" digital or digital spread spectrum phones in those
frequencies.

You also might pick up transmissions from wireless headphone or speaker
systems, and maybe some of the newer model baby room monitors, again
analog only, that also operate in that frequency range. If you find that
interesting.

Greetings, Can anyone recommend a source for a replacement green electroluminescent back panel for a R\S Pro 2022? Local RS tried and was informed since the 2022 is out of production they no longer stock this part. The R\S web site is no help, lists the correct part number, etc. but same response. Thanks for any leads. Gene Warner

>
>in any case, different strokes for different folks..

I agree Neil, different strokes. However, when a trunking system is
shared between many dissimilar services (police, ambulance, fire,
public works), I think that it's absolutely necessary to be able to
organize and instantly lock-out and lock-in the various dissimilar
services. True, the PRO-92 does allow you to lock out ID's, but if I
want to switch from listening to police to listening to ambulance
services, I hardly want to go and press "lock out" 20 or 30 times.
This was a tremendous design flaw. I hope Uniden does a scanner which
will allow alpha-numerics AND scan lists. Until then, I'm sticking
with my 245.

Is it possible that Uniden patented the concept of "scan lists" and
therefore GRE cannot implement them in the PRO-92?

Each of the 10 channel banks has its own 100 talk group list.
As a workaround, you could program the same frequencies
for your trunked system into 3 different channel banks,
and program the 3 talk group ID lists differently.

When I monitored them at practise and show in early September, the boss
was only on 238.150, which was used by the diamond/all 6. The solos
were on 345.900 unless they were all together. I believe the F-18s have
two radio sets, and the team boss could easily listen to either freq
and talk on either one as desired. 275.350 was also used by a pair that
went up during a practise session but I didn't hear it used during the
actual show.

> The first is the following from the "crew leader" who says ".....stand
> by the boards.....stand by.....BOARDS!" The second is some type of

I don't know about the 'sound off' but 'boards' refers to speed brakes.

> so it was hard to pick it up exactly. Lastly, does anyone have any
> recent logging with the frequencies of the ground crews? And is there
> much traffic between the ground and aircraft during a flight?

In addition to 170.900 as posted by someone else, I also heard 146.900
in use. There was a technical problem with one a/c during the practise
I watched and the pilot discussed it with the other airborne a/c on one
of the air-to-air freqs mentioned. The next thing I heard, ground crews
were discussing the problem on one of the maintenance freqs but I never
heard the pilot directly call the ground crew. If the maintenance team
monitors the a/a channels (which is reasonable to assume) I guess it
wouldn't be necessary. Any a/c suffering a maintenance problem would
have to alert the others on the air-to-air channel anyway.

I hope you had a great time at the show.

Just a warning - the TAFL site does not contain police frequencies, as
it is simply the contents of the gov't database, which they sanitize
before posting. The 911Scanner site might be good, though.

Well, as I'm sure we all know by now that plane carried Payne Stewart.
I don't watch golf, but I'm sorry for both his family and everyone
else's loss that crash caused.

This brings me to a question. Is there a common, or set, frequency
that planes use for emergency/mayday calls throughout the USA or is it
by a region or airport specific freq only?

With the PRO-92, you could program the same trunked frequencies
into multiple channel banks. Then, you could program
the Talk Group ID lists differently for each of the channel banks.

Actually, given that this is an unfunded federal mandate,
the odds that the Telcos would do a damn thing before they
had a gun to
their head (contempt of court fine threatened by a
red-faced, yelling federal judge) is next to nil.

Simply put, the Telcos have a policy of "If the government
realy needs it, they will get a subpoena."

No one wants to dedicate 3 days of a tech's time to set up
and take down a tap, without absolutely having to do it.

Now for the scary part:

Caller ID info si considered public information, so the
Govt. can get a list of all incoming and outgoing calls,
according to a caller
ID box on your line WITHOUT A SUBPOENA, OR PROBABLE CAUSE!

Think about that....

From: Ned Parkes <sparkes@fast.net>
Message-ID: <3815EB92.939AFAA2@fast.net>
Source record: 103979

Hi Burt,

While the scanner is scanning, punch the 2-digit channel number for the channel you wish to lock out. If you punch it again while scanning it will unlock the channel. Remember, the scanner must be scanning the memory channels and you must press the 2-digit channel number (i.e. 01 for 1, etc.)

If you want a copy of the manual email me offline with your address and I will make a copy of it for you. This is a great scanner and the only one that I know of that you can define your own banks with any number of channels in a bank, even overlapping banks.

The Regency HX-1500 - an oldie but a goodie

Yeah, I do , not as many since they closed Moffett & Alameda NAS. still have Travis, but its a good 70 miles away. If Moffett was still active , I would be inclined to have a scanner that could monitor Military aircraft. I used to have a pro43 for that reason(as well as the BlueAngels). I am not into avaition monitoring too much, but , as I said, leave 121.5 active, just in case.

1928. PRO-92 now listed

Newsgroup: rec.radio.scanner

IT is well worth the channel usage to leave 121.5 and 243 in your scanner. Most of the signals on 121.5 will be accidental trip of the beacon, but every now and then there are spooky calls. Any trafic on 243 tends to be "for real" inflight emeregencies. The wierdest that I personaly hear (live) was a newbe heli pilot lost over Indiania. The kid was freaking out. Trimbling. My wife, who never listens to my scanners, walked by and commented "he is sared to death". He was repeating all the directions that ground control gave hime and it ended with "OK..OK I am setting down now in a clear feild below me". We never heard any rescue activity, again there were no news reports of a crashed heli.
The other common NORAD/SAC(or what ever they have become) are less exciting but still interesting if you live near a training route.

I don't think Norway is the obvious place to buy such gear, as pretty
much everything regarding scanning is prohibited. Norway is not a
member of the "European Community" (Litterary speaking) thus laws
and regulations are very stringent towards non-commercial bands..

Neighbouring countries like Sweden & Denmark is better for buying
such gear ....

Without question, 121.5 & 243.0 are the most
overrated frequencies in the VHF & UHF aircraft
bands. Any aircraft on an IFR flight plan would
already be in continuous radio contact with ATC facilities from take-off
to touchdown and everything
in between, so in the event of a problem, there wouldn't be any need to
change frequencies. Aircraft on VFR flight plans and pilots who choose
to not file a flight plan would be a different story, however. Any good
VFR pilot with experience would know exactly where he was at any moment
along his route of flight, so he would have all appropriate and
important frequencies in front of him. Also, if a problem was
catastrophic and the aircraft was at a low altitude, there probably
wouldn't be time to change frequencies to discuss their situation.

Well I've got my list almost complete. I've attached a copy of the list to a post I sent to alt.binaries.radio-scanner . I live in Southern California so if anyone's looking for freq's you'll find a bunch of LA/OC/Inland freq's there.

Now all I need is the damn radio!

Happy Scanning!!!

Check out the latest Monitoring Tiomes magazine that just came out in the mail yesterday. There's an articel about replacing electroluminescent backlighting in RS scanners. The author managed to scam a supplier (address listed in the article) into sending him a sample of electroluminescent sheet. The article tells how he managed to rig it up and make it work.

Absolutly not. Owning a scanner is completely legal. If anyone wants to
understand the laws for there local, they could easily research it themselves.

I don't know but in a 2 days I will have one and find out. I understand it is computer controllable. If so it will be my second control project for VB6 as the first one is the BC895xlt. I recently aquired an AR2800 and it is SUPER! If it only had computer control it could'nt get much better! The AR2500 as I understand it has about 2000 memory channels to store frequencies, has full coverage, WFM, NFM, AM, USB,LSB and computer control. I would consider it almost the IDEAL scanner, but maybe that is because I don't have mine yet. I will know this weekend. Take care. Wayne.

If this happens randomly, im not sure.. but i've seen it happen when the connections between the PLL/CPU board (faceplate) are lose or something with them has gone bad, like a pinched wire etc or the ceramic resonator used to control the scaning speed of the scanner a a few other things goes out. Im not sure what else could have caused it, but i would sugest taking the covers off and making sure that the connections between the faceplate and the boards inside the scanner are making good connections..

Just a sugestion..
David

ROTFLMAO!!!!

Damn.... that was funny.... hee hee.... phew...

Seriously though, the best listening (at least when he was here in Phoenix) was the highway patrol (they are state troopers in RI I believe..) and the news media frequencies. Between the two I knew right were he was and what he was doing for most of his visit.

Don't bother with the secret service, they are almost always encrypted, especially when he's on the ground. Of course they're still good to log, because when the Big Man isn't in town, they use them for other more interesting comm's that are sometimes in the clear.

Your state police will most likely dedicate a channel to the detail - that's what they did here. So just program in all the State PD freq's + all the local news media in Providence and you should be good to go.

Naturally you'll want to visit the airport when he comes in (and program in the tower freq's). Seeing and hearing AF1 land is pretty cool in person.

That's the "OWNERS" manual, not a "SERVICE" manual. Big
difference. The Shack does still sell Service Manuals but at ~$25 for a copy,
makes buying them rather painful. :-o

Good luck,

Robert

Message-ID: <3817A89E.8C15B0AB@globe-net.net>
Source record: 103811

Don't get your hopes up. Already contacted all three companies listed
in the article. Only 1 responded (Durel):

"We are a high volume, high quality manufacturer of electroluminescent
lamps. Everything we manufacture is custom made per our customers
specifications. If you are interested in receiving a quote please fax your

request with a preliminary drawing of each design and the market potential

to fax # 480-917-6049."

The "High Volume" part is the wall I keep running into. I've been doing
the same research as Bill for the past year and experimenting with
EL panels from Limelights. I even found a company that sells generic
panels (in small quantities) but they were about 3.75" wide. The 2004
panel is 4". :-(

As for scamming the company with false hopes of a larger order, no thanks.

I'm rather surprised he mentioned that in the article. Makes dealing with

these companies even more difficult. Meanwhile... I've contacted more
than
a dozen companies and still I'm still searching the web... If I find a
legitimate
source, I will post it here.

1958. BC245XLT Tip

Newsgroup: rec.radio.scanner
Date: 1999-10-27 00:00:00 UTC
From: Kevin Fisher <klfisher@compusmart.ab.ca>
Message-ID: <s1fbqonhr0882@corp.supernews.com>
Source record: 103813

For those people having problems with their 245's not staying on the control channel, the following may help.

Having previously had problems with my 245 not staying on the control channel (and starting to scan looking for the control channel). I have found that first the ATT button does help somewhat in reducing the problem. The problem seems to be the overloading of the front end. (The 245 appears to perform somewhat poorly compared to the 235 and other scanners like the Pro 43)

I have found that removing the antenna works in resolving this problem. I however didn't want to leave the BNC connector exposed so I cut the centre pin on the antenna, thus making no contact with the 245.

I have found that this works very well and have had no problems since.

I would suggest trying this with an antenna you can discard if you don't experience the desired effect. I however have found the results to be more than desirable.

The poster is not responsible for any results achieved by the above modification.

<jeff.adams@gdfeg-es.com> writes

>Can anyone tell us whether the mobile AR8600
>(http://www.aoruk.com/ar8600.htm) will have trunking capabilities?

There are/have been no Trunking Capabilities planned for the AR8600 at
the moment.

>Has anyone seen this, or, can anyone read the blurred print in the
>picture? Or, is this just a mobile version of the AR8200?

Whilst the AR8600 makes use of similar operating structure/commands as
the AR8200 and can make use of the same slot cards it isn't "just" a
mobile version of the AR8200 and has different RF stages and design that
provide superior sensitivity and higher dynamic range.

Cheers,

They both operate in the same way and are for sake or argument the same
radio.

I wrote an "English" manual also which is still available and Howard
Bornstein at Design EQ also published his "Guide to the AR1000". This as
an extensive publication but is no longer in print. You can however
download this if pdf file format from his web site.

http://www.designeq.com/Guide1000.html

Hope that helps.

>I'm thinking of buying one if I can find one.

The AR2500 is a good number of years old now and was available when ACE
Communications were distributors of AOR equipment.

The AR2500 "Logic" was based around the AR2515 receiver which was itself
a modified AR2002. The AR2500 had the addition of a BFO but "receiver"
element of the radio was different to that of the AR2515 and wasn't that
successful.

It was primarily a product distributed under the AOR badge in the USA
and when it was dropped from their range it then became available as the
Trident TR-4500.

First off, I don't need to prove a thing to you, ya friggin loon.
Secondly, you failed to post the requested information. Where is
the report number I asked for?

What agency is this person with?

Thirdly, if I did post the proper numbers, who is to say that
a liar like yourself would not lie, and say they are wrong? You
have no credibility at all.

Last, why did you cross post this message to other newsgroups
that have no desire to see your posts?

I bought one from Ace Communications back in 1994. Biggest mistake I ever made with scanners. Its was a piece of junk. It had some good features but the the bad ones out weighed the good ones. The front end was pure trash because it overloaded so easy. The sensitivity was really bad also. You would think with a front end that overloaded easy that the sensitivity would be great. NOT! Ace Communications didn't practice good customer relations. I guess that's why they are no longer open. At least I hope they are not!

1977. Diamond D505 Mobile Antenna

Newsgroup: rec.radio.scanner
Date: 1999-10-27 00:00:00 UTC
From: stevenme@my-deja.com
Message-ID: <7v761l$2p7$1@nnrp1.deja.com>
Source record: 103856

Has anyone tried the Diamond D505 mobile scanner antenna? It seems like a good design, 39" antenna with a 0-20db preamp in the base of the antenna. I'm having a difficult time finding a mobile antenna that will provide enough 800mhz signal to overcome the loss in the cable and connector. It seems that a good rubber duck (even while inside the car) will outperform most mobile antennas (like the Grove ANT30).

I live in E. Mass and I'm trying to monitor the Mass SP 800mhz trunking system, but the signal quality is fair to poor unless I'm a couple of miles from a transmitter site (I live between the Blue Hill and Wrentham sites). I wonder how the cruisers fair so well in this spotty environment?

Hi, FeMaster (as in "Pumping Fe"?)

There's no single best source, otherwise it would have driven all the others out of business :-) Maybe your timely question will solicit a wide variety of favorites from the experienced listeners hereabouts. Let's start things off with the two most widely used, some pluses and minuses for each:

1) "Police Call" series of books at Radio Shack:
Handy in the field, contain lots of additional information,
easilly used for cross reference, indications of usage.
BUT, nine volumes needed for US coverage, updated only once a year, and
ignores some services.

2) PerCon's online DataFinder FCC database search engine at
http://www.perconcorp.com/datafinder/index.html
Exhaustive online source of all US licensee information, updated frequently.
BUT, requires computer and ISP, indicates license issued but not actual usage,
limited (but interesting) cross reference capabilities.

Next?

Hello Anthony. Yes there is national frequency for aircraft in trouble. Although I do not remember it the frequency is listed in the Radio Shack frequency book . You might also search for "airscan" and see what you can find. I should put that frequency in my scanner. We have a very active business airport and a Airforce / Army reserve base nearby. I doubt very much, given the information on hand, the pilots had little chance to call for help. They were probably all dead by the time they reached Alabama air space. Things happen very fast in the air. No I am not a pilot. My son is. And I served on an aircraft carrier during the Vietnam conflict. We had several planes lost off the deck, one during a launch and one during a recovery (landing). From my sons explanition a pilot has very little time in a situation like the one we are discussing to switch his radio over to the emergency channel....."73" Dick Elliott N9IPA

The freqs are 121.5 and 243.00. What often happens however is
that contact is made on another freq. (Co.. ATC etc. and not wanting
to lose contact with the AC the ground station will not get them to
switch .

In short you might hear emergency tfc. on any freq. in the Aero
Bank.

Thank you for the information. OK, if not the AR8600, then what are
AOR's plans regarding trunking? Surely not to ignore it? Is there an
updated AR8200 in the works with trunking? Or can that feature be
added via a card (such that it would apply to the existing 8200 and
the future 8600)?

Source record: 103871
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The PRO-92 has 10 channel banks. You can program up to 100 talk
group IDs per channel bank.

You can lock out talk groups so they will not be scanned.
However, you cannot lock out talk groups while *searching*
a trunked system.

BTW, instead of using the more familiar term term "searching"
within trunked systems, Radio Shack says
the scanner scans trunked systems in the "open mode."

Their terminology makes sense after using the PRO-92 for
a while.

Could someone please tell me once and for all if there are
TWO versions of the Motorola HT800 programmer software.
Someone told me that there is a hidden serial number in
the transceiver that can only be read with one type of software.
As I purchased my two radios at a junk sale, I am a bit worried
about not knowing their origin, as the previous owner also got
them second hand.
My software reveals the settings, but no mention of any previous
owners I.D.

Greetings Charley, others..

Oh Charley, time to clean those spectacles..

Yes, he did specify NOT being able to hear anything between the 118 MHz to 137 MHz region with his radio. Depending on where he is in the *world* may dictate the amount of activity for the particular region. This has nothing to do with the bands not being allocated as such in other countries. Now THAT was an assumption.

Ref.:
"One thing that isn't mentioned is whether your attempting this reception here in the USA. Folks tend to assume this however, this may not be the case."

"I came upon a RadioShack Pro-71 but can't get a thing in the 118 to 137 megahertz aviation com frequnsies."

Did you read the last sentence in my previous reply?
"If you can, put the upper frequency in one memory bank and the lower frequency in another bank and let the scanner do all the work!"

Charley, I've been playing scanners since the days of my crystal bound Regency ACTE and my old Bearcat 101 sitting here.. Further, the family has been flying since the days I can remember and a very good friend is an ATC at the local airport. Charley, I don't want to hear (see) war stories - thanks...

Cheers,
Gary

Charley Harp wrote in message ...
Uh, Gary, he did specify listening to 118-137 MHz. No assumptions to make. Even so, the civilian aviation band is a world-side standard, otherwise the US Navy would shoot down Iranian airliners more often.

If I were to tune through 120-124 slowly (say, pressing one 5Khz step every 10 seconds) it would take about two hours to complete a pass. That's why scanners offer the band scan feature, and they do it very well. Lastly, if you look up the frequencies used by your nearby airport, you'll find some that are rarely used, but when they are, it's good stuff.

Good listening, all,
Charley_Harp@alum.calberkeley.org

The trunked alphatags will only work if

A: you have entered them in the right place on the trunked tab grid and

B: The frequency tab contains the frequencies that make up the TRS in
question, again in their correct position on the grid.

When the 245 and the 895 hit a talkgroup they send Winscan a number,
like 00048. That talkgroup ID could be found on many trunked systems,
so WinScan also checks the frequency that is active to see what TRS it
belongs to. If that frequency isn't found, the Alpha tag will not show.

>fast scans.
>3. What do I loose by moving to VR-500, I am not using the Trunk
>Tracking>Any feedback would be very helpful
> THE Bearcat is a "true scanner" & much easier to use & much faster scan speed. "overall" I would guess that it's also not going to be "beat" too often by the VR-500 within it's 29-956Mhz range. The VR-500 on the otherhand is a "communications receiver" with full shortwave 1-30Mhz "all mode" as well as no gaps V/U (cell blocked). For your local Sheriff/Fire/ambulance ect I would stick to a bearcat, but if you want to monitor & "play around" on lots of other freq ranges (HF, CB, TV & FM ect)not in the BearCaT, go with the VR-500.

That's the ticket. I'd downloaded the 'Trunked' data but hadn't downloaded
'Conventional'. Now the Alpha Tags show up on the display. Thanks.

Scanners used to be *so* much easier back in the old days before
trunked systems.....

Go to www.radioshack.com and download it, it's under Product Support/Communications/Scanners. A hint though. You might want to open the scanner .txt files up in a new browser window, so you can have the forward and back button.

From: softwaredeveloper@altavista.net
Message-ID: <7v5loovv1@nnrp1.deja.com>
Source record: 103913

I currently own a Bearcat 235XLT and have been considering trading it in for the VR-500. Before I make this move, I am looking for some feedback in the following areas:

1. Which device is more sensitive?
2. Scan I search with the VR-500, I believe that the 235XLT can perform fast scans.
3. What do I loose by moving to VR-500, I am not using the Trunk Tracking

Any feedback would be very helpful

Thanks

The two stores I called today said it still wasn't even in their
computer. Maybe they didn't look it up right, but, I'd expect it to
show up as a valid catalog number before it actually arrives. Or maybe
not.

Lloyd, beware the Pro-2023 scanner. While it may have a Radio Shack logo on it, Radio Shack never sold them. They were planted in various thrift stores around the country via midnight drops by black helicopters by the Illuminati (the International Jewish/Communist/IMF/Free Mason/House of Rothchild/CIA/KGB/Satanic/UN/Tri-Laterilist/Kiwanis Club/Rotarian conspiracy.)

After operating a PRO-2023 for a few hours, a capsule full of germ warefare/mind control silently explodes, and you'll feel a sudden desire to wear Birkenstock sandals, produce multi-racial children, loiter in porn video arcades for immoral purposes, develop a sudden craving for tofu, and start reading the New Yorker magazine.

I suggest you trade it in for a Bearcat scanner.

Do you mean 'the radio doesn't trunk in that range', or that the frequencies
in question aren't trunked? If the later, they are. Military bases all
over have trunking systems set up in the 406-420 range, and the FCC intends
(along with narrowing channel spacing) to have all ranges trunked, in time.

I find a plain old rubber duck to be more than adequate in this range.
In fact I get a decent signal with no antenna at all in this range.

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=189081427

Model #- H99QX053H
Factory ID - H43QXN7139CN

12 channels
6 watt output
136-150Mhz
SECURENET-S capable
Emergency Button
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
Good Medium-Capacity Battery
Antenna
Motorola Porta-Pocket Charger - NTN5563A
Motorola Leather Holster/Case for Medium Battery
RIB Programming Cable
Saber RSS Programming Software (you must have the necessary licenses to use it)

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts and in good condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

OK Blake, here is ONE of the names of the Officers that took a report
listed below. I believe you will try to lie again & state that they
told you
something different than what is true. I am posting the Officer's
number
FIRST & LAST digit, YOU need to CORRECTLY tell me what is
in between to identify that yoiu really did talk to the officer!

Larry MacNabb #3*******3

YOU CORRECTLY come up the the numbers in the "****" field &
at least we will know you really did check it out. You telling the
truth about what they said
is another matter.

2031. Re: Pro-92 400 MHz Trunking?

Newsgroup: rec.radio.scanner
Date: 1999-10-27 00:00:00 UTC
From: Andy Clark <mcpandy@hotmail.com>
Message-ID: <_ZuR3.91$W43.3695@news.rdc1.az.home.com>
Source record: 103930

As copied from US Scanner Online (http://home.pacifier.com/~rlsmith):

Government Trunking

Frequency Groups Used for U.S. Government Trunking.

The U.S. Government Trunked Land-Mobile Systems use a plan that provides for blocks of channels identified primarily for Federal Government trunked land-mobile system use. The plan includes 20 channel pairs grouped in 5 transmit channels and 5 corresponding receive channels.

Channel Selections Group 1 channels would be selected first, then sequentially those in Groups 2, 3, and 4, listed below. If some channels are not available for trunked use in certain locations then alternate channels can be substituted on a case-by-case basis.

The channels listed below are designated primarily for Federal Government trunked land-mobile systems. However, they may also be used for non-trunked systems, but only to expand existing systems, when it is not technically feasible to use other frequencies.

GROUP 1
406.350 415.150
407.150 415.950
407.950 416.750
408.750 417.550
409.550 418.350

GROUP 2
406.750 414.750
407.550 415.550
408.350 416.350
409.150 417.150
409.950 417.950

GROUP 3
406.550 415.350
407.350 416.150
408.150 416.950
408.950 417.750
409.750 418.550

GROUP 4
406.950 414.950

407.750 415.750
408.550 416.550
409.350 417.350
410.150 418.150

If you find the frequencies in use in your area drop me an email to let me know. List the frequency group and/or the frequencies in use. Where they are and if you know who is using the system. Most likely the system will be Motorola but there may be others in use, so include that information also. If enough of you respond then I will be able to post a listing of the locations.

Source record: 103932

Well, I do not know how useful this post will be, as I have never used the 235, but I DO enjoy my VR500 immensely.
I would have to believe that the 235 scans a great deal faster than the VR500, but I did not buy the VR500 for scanning per se. At least not for rapid scanning. As it is, it scans at a respectable clip for my purposes.
I find it to be quite sensitive, and in fact the air bands are dynamite just on the stock rubber duck antenna.
There are a lot of neat features to the 500, and one thing it does have over the 235 is the MW and SW bands... which sound very nice on an external antenna other than the duck. Plus, you can select the mode of reception (AM, NFM/WFM, CW or LSB/USB) independently of frequency.
Plus you have 1000 memory channels, I am not sure how many the 235 has...
Like I said, I cannot offer a real comparison which you certainly need, but I do recommend the VR500 for portable HF and VHF/UHF monitoring with clean audio and impressive sensitivity and selectivity.
Mike

2034. WTB: Manual for AOR1000

On my Scanner & RADAR Detector Laws web page (http://www.afn.org/~afn09444/scanlaws/), I had a pointer to the R.A.D.A.R. Home Page (Radio Assn. Defending Airwave Rights, or something like that).

A couple months ago, I received an e-mail from someone supposedly at that organization advising me that they had a new URL, and to "please change it." I did, to "www.radar.org."

That URL does not go to the RADAR home page. It instead goes to a page advertising the "Microsoft Windows NT 4.0 Option Pack."

I have tried getting ahold of people at RADAR, but I'm tired of trying to be patient, and of waiting for whatever is wrong to be corrected, or to get some sort of a response. Its been two months and numerous e-mails have gone unanswered.

I've removed this link.

I apologise to everyone if they've been wanting to find the RADAR site and haven't been able to. I've no idea where they've gone. I'm not sure what is going on - whether thier site has been "hijacked" by a hacker or something, and they don't know about it...or what. But there's nothing I can do. If its a joke, its not funny at all.

Until someone gets ahold of me and lets me know what's going on, or where the real RADAR home page is...

Gary,

Although this might seem like a technical issue it's really not... it's a relationship issue: When your wife buys you a brand new scanner you do not even think to suggest to her that she has somehow come up short in selecting a quality piece of equipment. If you do, next time you could be looking at a pair of socks or something.

I mean, there are guys out there who have to beg permission from their wives to buy these "toys".<g>

George,

The 5 second delay is fixed now on the 245 (that doesn't mean they're in the supply line yet) and all subsequent trunktrackers, including the 780, will not have any problem with it. Trunked and conventional can be scanned without any "exit" delay.

It is slightly bigger than the BC760, actually being the closest DIN size to that I'm told (I haven't seen it yet).

Len,

If I had it, you'd have a copy ASAP! You guys did a great job on the
Pro-Turbo software and I'm still a happy customer.

After visiting Radio Shack's website, I realized that this scanner was
produced ~ 1997. The Shack's policy on newer scanners is not to
offer Service Manuals, in hopes of preventing any hacking. I couldn't
even find a listing for this manual at their website:

http://support.tandy.com/support_electronics/38779.htm

I have Service Manuals for 8-9 scanners so far but nothing
for this one. The closest I can get is a 2042 manual, which is
a completely different model. :-(

Actually, it's not an antenna for remote control...it's a temp sensor that
will automatically raise the price of the product when the temp goes up.
From what we've heard on the news today, the idea is "fizzleing" out.
Sorry, I couldn't resist.

Trunking systems/protocals differ considerably and the Trunking Motorola
Trunking systems you are familiar in the States are not widely used in
other areas. Australia uses Motorola Smartzone in some areas but on
slightly different frequencies I believe.

For the vast majority of users in the UK sets such as the
"Trunktrackers" now available in the States are nothing more than
conventional scanners when used here I'm afraid.

Creating a unit/system that can adapt to the various Trunking systems
used around the globe is a little more of a task but perhaps could be
done by the use of "plug in cards" but I assume would have to be
something that was intended from the start rather than "added on later".

Time will tell I guess....

I must disagree.
While I do not hear comms on either 121.5 or 243 all that often, it is only 2
channels out of my Pro2004s 400. At least once per year every since I bought
my 2004 new (pre ice age mid 1980s..it has been a LONG time) I have kept
those 2 in the scanner. Lots of spooky stuff over the years. While
I agree that a lot (even most) emeregency comms take place on the more common
ATC freqs, ELTs and the hunt for downed planes is excitting. We had an ELT
go off in Lexington that was in someones garage. The CAP scrambled from
Louisville and took several hours to find it. Long after several of us lowly
"listeners" and hams had tracked it down to not only the house but what
corner of the garage it was in. If the CAP had listened they could have saved
some money on putting several planes aloft and activating all their ground
crews.
Had it been a real plan "crash" we would have still beat the CAP by several

hours. And while I never expect to find a real crash, it is nice know that if I hear an ELT there might be a plane nearby. And that I have the equipment to help locate it. Even with out fancy RDF equipment, by plotting where an ELT is received, you can narrow down the location, ELTs are low power, operating on rather poor antenna and have a limited reception range (on the ground..the signal can be received much farther away in a plane). To be of help you need to know the telco number of a nearby flight service station or tower, your location (to the nearest second is nice, but to the closet minute will do). There are several web sites that proport to give you your lat/long based on your address and that is close enough for this. Simple thing, but it might help locate a downed plane, or at least a false alarm ELT.

Jerry, I have WINSCAN and it intermittently gives the Alpha tags when scanning Motorola trunk systems in the scan ID mode. If you go to the search mode to receive all the IDs then it will show the Alpha tag all the time. For the Ericsson systems it will only show the Alpha tag if you set the trunk IDs to the EDACS decimal mode. I have contacted the owner of the software and he said they are working on the problem.

2066. FS: Icom IC-R100 Scanner/Receiver (w/800mhz)

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: atbernstein@osprey.smcm.edu
Message-ID: <7v9oqsujn1@nnrp1.deja.com>
Source record: 103756

Icom IC-R100 in very good condition.
Comes with AC adaptor. Sorry, the instruction manual is missing.

The Icom R-100 is a compact multi-function receiver covering from 100 kHz to 1856 MHz (including 800MHZ). Reception modes include AM, FM and FM-wide. The R-100 is easy to operate. You can use either the keyboard or tuning control to access frequency and memory channels. Frequency Step: 1, 5, 8, 9, 10, 12.5, 15, 20, 25 kHz (12.5, 20, 25 kHz above 905 MHz). Of the 121 total memory channels, 100 store operating frequencies, modes, RF attenuator and preamplifier settings. 20 scan edge memory channels are used for specifying ten pairs of frequency ranges required for programmed scan. Auto-memory write automatically memorizes received frequencies (channels 80 ~ 99). One channel is used for priority scan. The built-in 24 hour clock-timer has lithium battery backup. A 15 dB preamp operates in the 50 to 800 MHz range. Three separate antenna jacks are utilized for different frequency ranges. A large backlit LCD ensures readability. Requires 13.8 VDC @1 Amp. 2"H x 5.9"W x 7.1"D 3.1 lb. (1.4 kg)

This radio goes for around $850 (new) at AES.

Asking $525obo + shipping

Contact me at atbernstein@osprey.smcm.edu

Sent via Deja.com http://www.deja.com/
Before you buy.

Date: 1999-10-28 00:00:00 UTC
From: oldgear@aol.com
Message-ID: <19991028100119.15934.00001804@ng-cc1.aol.com>
Source record: 103763

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad or antenna, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $125 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

Realistic Patrolman-6: Portable AC/DC Receiver with AM, FM, air, High/Low VHF and UHF bands. The radio works fine but the dial cord must be disconnected. Dial not moving. AS $15

RS Pro 30 Scanner: Hand held 16 channel scanner. Looks & Works good, but the battery cover plate is missing. Make me a reasonable offer.

2074. Re: Pro-2041 Service manual

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC

Message-ID: <M1UYOOfQhQT5tM66VCY6sQhVRsMd@4ax.com>
Source record: 103764

That's why I was hoping to find someone that would make me a copy for a decent price or a swap for what I have, @$25 by the time I am done it will cost me about $45-$50 if not more, first I have to pay the exchange rate which will put it in the $35-$40 range, then I have to drive over the border to the shack,(only way you can do it from Canada) so there's another $10 bucks in gas, but i can save a few if I make it when I need gas as even with the exchange most times it is cheaper over there, but I have a $3 border crossing charge, and that's just to order it, then I have to go through the gas and border charge again when it comes in.
With a trade I can drop into the local copy place copy it off and then drop it in an envelope and off to the post office and out it goes, $10 bucks at most maybe $15.
You wouldn't happen to have one would you Robert? I have a Pro-2004 and had a Pro-2036 (bearcat850xlt ?) which I traded off for the Pro-2041 now I am finding that it is very DEAF on some freqs. I like to listen to the undercover dicks in the area sometimes and find that the 2004's s meter gives me a 3 or a 4 on a scale of 0-5 and even if I swap the antennae from the 2004 to the 2041 the 2041 still can't hear it yet if I go up a couple megahertz the thing works great there, sounds like someone has been playing with it and messed it up and that was why they wanted to get rid of it.

Cheers

Len

I think the point is that more applications can open .csv files than .xls files. They may not be more *standard* but they are certainly more versatile. (even Excel can use them ! :-))

Because Excel doesn't allow you to save a workbook with multiple sheets in CSV format without saving sheets individually. That's more work than I'm interested in. I beleive there's an Excel viewer that you can get for free from Microsoft.

Besides the list is always a work in progreess and I don't want to have to create multiple files each time I post.

Happy Scanning!

Does anybody know of a stand or holder for handheld scanners, to allow them to be held in an angled position on a desk or table ? The reason I ask is that my Pro-30 viewscreen can only be seen when angled and not when it is standing upright on a desk.

Thanks,

Richard.

Again, CSF doesn't lend itself very well to multiple sheet workbooks.
Each sheet must be saved to an individual CSV file and that doesn't
work well for me. If someone wants to repost the file in a different
format then by all means please do!!!

I would still recommend looking into the Excel file viewer.

Bob, I hope you know that its going to be your fault if I go out and buy a PRO-92 the day they come out :)
Sounds like a good scanner, now if only it could do Motorola Astro digital systems....

There is a holder called Holdz-It that is angled. I got mine at Boaters
World, but you may find it at other marine stores.
Alot of the marine stores have some kind of radio holder that would work.

Looking for a manual for a regency K100. This is one of the "touch Scanners.
I would prefer the k100 but would be able to use a copy of almost any
Regency touch scanner.

2084. EAVESDROPPERS GOING OFFLINE.....

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: EAVESDROPPER <ian@eavsdropper.dabsol.co.uk>
Message-ID: <Em2S3.9624$5P2.17135@wards>
Source record: 103774
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Due to prats in the newsgroups who insist on putting any old crap on their websites and then linking it to Eavesdroppers I am now pulling the site off and moving it to a secure server only for access to those who have been working with me on new decoder projects.

I have spent years in this hobby and it has also earnt me a small living. it is in enough trouble as it is what with digital encryption etc and stupid individuals that post material that is obviously "not on" to post puts the hobby in a bad light and makes the laws around scanning even worse.

We have seen the result of this in the U.S already what with Motorola and the feds etc this is going to happen all over if these idiots keep posting stuff like that.

I feel that in the interest of the hobby it is better for me to pull the site and go more behind the scene and work with those who also love it and contribute with their skills., this is very unfortunate for the newbies and regulars as new decoders that we make will not be made availiable for some time and possibly only to those who have helped in here.(but you never know :-))

I have recently made some good inroads into some very nice decoder projects with people in the U.S and U.K but access for all to this is now lost thanks to these people.(please feel free to thank them)

To those of you who have been working with me (you know who you are, mail me to make sure i have you all in my book and we will discuss this further, there is no reason for us to stop the work we are doing.

if you are somebody who is a good programmer, digital signals analyst or similar and want to join in with our efforts to produce new and better decode software, please also mail me for further discussion.

Thank you to all those who have sent me some very nice comments over the time and I hope you all continue to enjoy this great hobby, sorry about this but enough is enough.

As for the newbies etc I can heartly reccommend the following sites who have proved to be reliable and a good resource for scanning and eavsdropping related stuff.

STRONG SIGNALS
http://www.strongsignals.net/

RADPROJECT
http://www.geocities.com/ResearchTriangle/System/5140/

As for the winflex/MDT etc I was one of the only places to get it so someone else will have to do that now...if you can put up with the threats like i got from the "brothers" :-). (sorry to my U.S friends about that, they DID NOT get to me by the way !!. if you need it that bad post a call for me in alt.binaries.radio-scanner.

PS. i will still be around the newsgroups of course :-)

regards

Eavesdropper

2085. Merge a scanner to a Palm Pilot?

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: MadBasque <madbasque@my-deja.com>
Message-ID: <7vanj1mao1@nnrp1.deja.com>

anyone here keeping tabs on the new Palm-knockoff, Handspring Visor (www.handspring.com)?

They have an expansion slot in the back - I'm thinking if they can make an MP3 player or a GPS unit, why not a frequency counter or a freq. database manager?

Any thoughts on this?

Sent via Deja.com http://www.deja.com/
Before you buy.

2086. FS: PRO2006 & SONY SC1PC

Newsgroup: rec.radio.scanner

Message-ID: <s1hh4poir0866@corp.supernews.com>
Source record: 103776
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Radio Shack PRO2006 in super clean condition. Used probably used less than 10 hours. The unit belongs to my clueless brother-in-law who asked me a while back to get it for him and then never really learned how to use it. Now he wants to sell it. No box or manual (you can get the manual from the RS Web site for free). Has the cell mod; not the so-called "speed-up mod." $300 with shipping. Really, it's close to new. Clueless never even learned how to program it.

Sony ICF-SC1PC in excellent condition. Not used much but does not look or smell mint like the PRO2006. I have owned it for about six months; used it for maybe 20- hours, but I'm the second owner. Includes box, all accessories, software, manual
(everything that comes with a new unit). Will include a Watson Super Gainer antenna, Watson 800Mhz duckie antenna and a cheesy-looking but quite functional Cordura case. $310 with shipping. The two antennas and case were about $80, so it's a pretty good deal for someone who is familiar with this scanner. If you're not, check the StrongSignals Web site for an overly enthusiastic review. Buyer beware: The software sucks. On the plus side, it has police, fire. med etc. preprogrammed into it and will work right out of the box. If you're new to scanning, this is as painless way there is to get into it.

I had a feeling you were going to have to do that sooner or later. God,
that sucks, but hey - good for you. Don't let "them" ruin your hobby.

There is a way to get even.

Tell us WHO it was that did that so we know not to even bother with
their sites again.

That is really a shame, Ian, but I can't say I blame you for it either.
Look what the scanner community has given Bill Cheek in return for all
of his effort and knowledge. The guy's on the verge having a criminal

record just because of one really ignorant bozo in NJ.

It's very common to see people in this hobby ready to TAKE. By contrast, the numbers of those who GIVE BACK are really small. It's a shame that we'll be losing one more when Eavsdroppers is closed.

> I have recently made some good inroads into some very nice decoder

I think listing their names and allegations publicly here would be "thanks" enough, Ian. I for one would like to know who it was that brought all this on.

> To those of you who have been working with me (you know who you

I will do that Ian. I do have some back burner work that could use a stir..

If you can, here's what I would do on the main page of your site: Big bold letters of all the people who forced you to close and why. If you received threatening emails, post them up there too. Don't let these guys have the last word, expose them for what they are and get them to crawl back under their rocks. That way they'll think twice before doing it to someone else.

-Phil

Good points , While my brother , sister-in-law and nearly everyone else except my nephew is not interested in scanning . My phone rings off the hook if there is a big fire, police action , or whatever you involving Emergency services in their area. Usually, while sitting with them watching a football game etc in the family room. I wear my earphone and eventually while make these facial expressions like the world is coming to an end, that prompts everyone to ask what is going on and I always reply with" illegally parked car" or other smartalec answer.

Sad to hear about the Blue Angels tragedy today, always enjoy watching them and monitoring them as I live near SF. and Moffett NAS , although the base is now a Federal airfield and no more shows there. But, the SF show was always better with them swooping over the bay and the Golden Gate.

Sorry to hear you are getting so much crap over this.

Tell me, though. What's going to be involved with a serious hobbyist gaining access to your new secure site?

I know I would love to access it, but I feel the need to remain anonymous just as you do for obvious reasons.

Metal bookends bent to the proper angle work great. Cheap! And you
get usually get two to the pack. I like the ones with a cork or rubber pad
on the bottom.

2099. Wanted: Yaesu FT-900, will trade the following...

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991028191609.22100.00000068@ng-cp1.aol.com>
Source record: 103789

Hello,

I am looking for a Yaesu FT-900. I have had my eyes on this rig for years and have a collection of items for trade. All items that I have for trade are in perfect working order.

ICOM 725 HF Rig 10-160 100 watts w/ manual
ICOM SM-6 Desk Mic w/ Box
ICOM HM-12 Hand Mic
ICOM SP-3 external speaker (matches IC-725)
"Sea" Coupler -- tunes 24 - 160 w/ manual (similar to SGC)
"Bird" 43 UHF Wattmeter with 3 slugs

Please e-mail me at: Jhulet@aol.com

2100. Coke Antenna Mystery Exposed!

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <k_4S3.681$HQ5.7285@news.rdc2.mi.home.com>
Source record: 103790

A few weeks back, someone posted a message that they noticed a small rubber-ducky antenna on the back of a Coke machine.

Well, the truth is out! The purpose of that antenna is to allow marketing to adjust the price of Coke, by remote control! So when it's really hot out, or maybe during lunch time, or special events, they can send a signal to "UP" the price, due to the demand.

How long before a new law is passed, making it illegal to listen to Coke machines?

Bill Crocker

2101. Re: BC245XLT Tip

Newsgroup: rec.radio.scanner
Date: 1999-10-28 00:00:00 UTC
From: "David M. Hitchner" <nospam@trash.net>
Message-ID: <7vamhj$cj7$1@bgtnsc03.worldnet.att.net>
Source record: 103791

The 245 may be more susceptible to overloading because it is more sensitive.
I have done comparisons with the 235. Side by side using the same antenna.
I am able to track on systems on the 245 that the 235 won't even attempt to
track.

I just read about that today. Coke does not plan to implement
that system for a year or two, but they are looking into raising prices
during warm weather, and keeping the "lower" price during cold
weather. The machine that someone noticed was probably one of
many involved with a field trial experiment to determine usage habits.
There are probably some other benefits to this otherwise, such as inventory
control.
Supermarkets are currently using 1 day "Just In Time" delivery
thanks to their electronic inventory systems.
Anheiser Bush uses an electronic inventory control system that tracks
down to the distributor level, so they can more effectively brew on
demand. Unlike wine, beer does not age well.

Wouldn't it be funny if some hacker could program a next generation coke
machine to deliver sodas for 10 cents!

Below are articles I've saved about the AR2500.
Strongly suggest you read them before spending any money.

Here is what I have. The School police channels are updated somewhere in my computer. Too lazy to look for it right now.

LV City and Clark County Fire use twelve freqs. the below listed contains 16 freqs I don't know which 4 are not used, but I do know that if all are loaded, you will here all transmissions.
855.7125, 859.4625, 856.2625, 859.9375, 856.4375, 860.2625, 856.7125, 860.9375, 856.7625, 856.2125, 857.7625, 857.4875, 858.7625, 860.4375, 859.2625, 860.4875

IDs Motorola Type II
CH 1- 40976 LV East
CH 2- 41008 County West
CH 3- 41040 County East
CH 4- 41072 LV West
CH 5- 41104/41004 City of N. Las Vegas Fire
CH 6- 41136 LV South
CH 7- 41264 Downtown/Airport

N. Las Vegas PD (EDACS) these freqs MUST be loaded in the following order!
856.7375, 857.7375, 858.7375, 859.7375, 860.7375

CH 1- 01-021 Dispatch
CH 2- 01-026 Car - Car
CH 3- 01-041 Jail/Talk around
CH 4- 01-025 Information

Clark County School Police Motorola Type unknown
852.4875, 856.1625, 857.5625, 859.1625, 860.1875

Source record: 103597

Well, strange but I had something similar today! While I was in manual I press the LIMIT V twice & it started a search! I only wanted to go back 2 channels. I couldn't stop the search also. So I turned it off. Then back on. Started scanning fine, But... the MANUAL key had no effect. In fact no keys had any effect. But if I turned the knob it would stop the scanning momentarily. Then the BC9000 would scan ALL the 500 channels, locked out or not. If it encountered some activity it just kept going.

So.... I turned it off again then on. Same thing! Oh no, I broke it! Waaaaaaaaah! I shut off power to it for a few minutes, same thing. By the time I got home I decided to take it out (I use it mobile) & see if a ribbon cable wiggled loose or whatever. Anyway I got several pages and cell calls. By the time I got inside & hooked power up again 15 - 20 minutes had gone by.

Now, everything works perfectly. Weird! 8-) So tomorrow I will reinstall it in the mobile & see what happens.

Has anyone come up with a tap point for an S-meter on the BC9000 yet??

As far as your searches, the initial step depends on the band. if you don't like it you can change it. You may have a freq that is next to a band edge. Going up may be 25 kHz down may change to 12.5 kHz. A good example in in the UHF area.

Man, everyone is getting heavy about the cost of a soda (& don't forget the roach coach rip off prices!)! Sure I don't like it either. Vote with your wallet! That's way I pack my own @ $0.20 ea. (military commissary). It would be nice if this kind of energy could get gas/diesel fuel prices down. I guess we've strayed pretty far off topic by now. 8-)

SEVEN years! How much do they soak you for that? Must be back east,
probably like Massachusetts?

Most newer commercial natural gas accounts out here are read by radio.
In my city the water meters are read electronically with a probe/keypad.
They read about 900 "meters" a day per meter reader.

I don't know if you got any replies yet, but I had one of those. I think it was my first scanner with a keypad! Most BC's back then you just entered the lower freq then LIMIT then enter the upper freq then LIMIT again. Then press search. How many channels did it have? 10? I can remember getting it home and opening the box up in the garage & started plugging in freq's!

The Rubber Ducky that comes with the Pro-30
& its brother the ADC is cut at 118 MHZ
you would probubly get better gain on the 30-50MHZ
range by a telescopic whip.
But anyt antenna for such a Good & wideband
reciever is of course a compramise.
but the Pro-30 & the ADC were great scanners
for their day and quite imune to intermod

I think it's far more likely that any radio connection would be used to poll inventory, and allow "Just In Time" refilling the pop and refreshing the coin mix. (As well as giving them a check to make sure that their service people don't lighten the take a little.)

I imagine they could change the price remotely, but to so from day to day would be really really stupid. (Almost as stupid as New Coke, hmm...)

Ron of that ilk.

Good grief.... Next thing you know people will claim the antenna is there to receive a secret government signal to attack, upon which all coke machines will transform into Citizen Processing Robots and round us all up into interment camps and government detention centers. Then someone will buy into this line of reasoning hook line and sinker, and start shooting coke machines to get at "the man".

C'mon guys!

Coke is not the party responsible for setting the price on the sodas in the breakroom. That is done by the owner of the machine. Vending machines are a resale business. It's very simple. You buy the soda in bulk from places like Costco or Sams Club at around 25 to 30 cents a can and then you sell them in your machine for whatever you want. You make money by charging more than you paid for the sodas.

Knowing this, I would say it's a safe bet to assume that the antenna on the machine is used by the guy who fills the machine, much like the new electric meters allow the meter-reader to read your meter from the street instead of bugging you to open the gate into your backyard. It's probably short range, and simply reports back how many of each item were sold since his last visit. This keeps the guy honest - chances are he isn't the owner of the machine, just an employee of the vending company, which means there's no one around to keep him from helping himself to free sodas, not to mention that nice thick stack of dollar bills and bunches of change inside the machine that he has the keys to. The meter don't lie, see? So he can't forge any paper logs or anything else that equals money stolen from the boss...

It's just common sense, folks. Don't listen to the conspiracy wackos.

-Phil

>kick the meters, and read the data that comes back.

That's pretty inefficient. In some places the meter is connected to
your telephone line; the gas company can read your meter remotely,
without wasting fuel to have a van drive all over town (and without
ringing your phone or interfering with your use of it).

>And since gas meters have
>to by law be replaced every seven years

Where do you live? I've never heard of that law...

>I really suspect that the antennas are similar, so that machines can
>be read and 'examined' without stopping unless it is necessary.

I'd love it if it were true. I'd tune a scanner to the frequency of
the Coke machine downstairs and monitor it with my computer - never
again would I have to trudge down 5 floors to the Coke machine only to

discover that they're out of Diet Coke or that the cans are warm. ;-)

There has been considerable discussion over the last few months about
whether the 92's method of following subaudible tones (at least in moto
systems) on the channels (as opposed to the Uniden method of decoding the
control channel) would be able to keep up with a busy trunked system.
Have you noticed any difference from the bc235/245 in this respect?

I really want to buy this scanner, and I'm glad to hear the audio is
good, so if it does well in following trunked moto systems, I'm all set.

Rob,
I went to the site that you recommended for the FCC License preparation class. I was a bench tech, working in cellular. My employer required an FCC General Radiotelephone Operator License to get a promotion to management. I saw your post and went to

http://www.ddcommunications.homepage.com

You were right! I was able to get the study manual at a killer price. Then I used their online practice exams. I did good on the online exams so I called the company. They came to my workplace, gave a 1 hour class, then administered the Element 1 test. I PASSED!!!! Then another 1 hour class (Element 3), I PASSED AGAIN. Everyone of us (5) passed the test (some of the guys hadn't even studied before, the class was that good!!!!!!! 3 of us were offered the Radar Endorcement, so what the heck, we did the class and passed it too! BEST OF ALL, THEY WERE THE LOWEST PRICES OF ALL OF THE PREPARATION COURSES, AND ONLY TOOK 1 DAY, NOT 2-6 DAYS!!!!
Im going to take the GMDSS maintainer class next Saturday just to get the license!!!! (It'll look good on my resume).
Anyway, thanks Rob for mentioning your success with them. Now I have my license, and the respect it brings...
Take Care,
Jeanette Robison

Other stories have said that the vending machines under test were remote
controlled, not temperature controlled, but this is a respectable
(+/- 30dB) writeup on it.

2162. PRO-30 Scanner Sensitivity Question

Newsgroup: rec.radio.scanner
Date: 1999-10-29 00:00:00 UTC
From: Richard Smith <rsmith@planeteer.com>
Message-ID: <wonS3.185965$5r2.410765@tor-nn1.netcom.ca>
Source record: 103665
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello there,

I have a PRO-30 scanner, and have noticed that if I place my hand on the rubber duck antenna, reception can be greatly improved (signals in the 40 to 50 Mhz range). In fact, some signals that would normally be missed are now strong/loud enough to break the squelch threshold and stop the scan. Is my scanner sensitivity at fault, or are rubber duck antennas poor receivers of weak signals ?

Could anybody suggest a better antenna to replace the rubber duck and still allow the scanner to be mobile ?

Thanks,

Richard.

2163. Handheld Scanner - What's the best antenna ?

Could anybody give me a rough idea with regards to a better antenna to use with my handheld antenna instead of the stock rubber duck ?

Thanks,

Richard.

thanks for the comments, the need for anoniminity from contributers is obvious and guaranteed by Eavesdroppers as always. fortunately for me I keep within the law pretty much by the way i do things and by careful observation of the law and of course not doing stupid things like posting decoded messages etc on site or group. Many know who i really am and i have never tried to go out of the way to hide it but i do not broadcast it either :-).

The hope now is that I can setup a site that will contain pgp encrypted files only accessable by those who's pgp keys i have (ie. the contributers) what I really want to see is less talk around here and more happening, the hobby is doomed if all us like minded peeps don't pool our resources and keep up with modern transmission standards. The scanner manafactures cannot get away with doing this (as explained to me by a scanner manafacture the other day who shall remain anonymous) because the law will not license them to make digital scanners as they will be only for one purpose then...to illegal decode things !.

So it is upon us lot out here to get together and make the software to do it !!

so get it on people !!!

and excuse the spelling not time to correct as i have just had a months e-mail in one day due to all this !!

regards to all

Eavsdropper

>While I accept that anyone who is really motivated can backtrack and pierce
>my cloak, it is the best that I can reasonalby do. And I am very careful
>about what I say in this, or any public arena.

Ah I am glad you brought that up. I for one do not waste my time listening to private calls unless they happen to get captured during another of my events, they are then automatically destroyed anyway, Eavesdroppers (also under other names over many years) has on many occasions helped the law services out, so it is in the interest of the law to watch but not harm some of us as we can also be a hell of a help as well as a potential watcher over them how about 140,000 pound embezzler caught , or an escaped prisoner, and a class "A" drugs drop...to mention just a couple all thanks to what we do in this group (can't give no details)

I have been watched and harrased many times by the powers that be for my rather outspoken views and "language" on what they get up to especially local to where I am they know me well and know that I will jump on them the moment i smell a rat., but when you talk like that you are better off in public view where everybody can see what goes down when they try to screw you, and I STILL have no criminal record or similar despite their efforts .

It is unfortunate that there are those who chose to use our tools for illegal gain or to evade law when it suits them and this i do not advocate. At the same time I DO advocate monitoring those who watch over us, not for any sinister deed but to see that they are also not up to foul deeds as they often are !!.

>I suspect Thomas Jefferson is spinning in his grave as our freedoms are
being
>not so slowly erroded.
>
This is another aspect to what we all do and a very important one. At the

risk of sounding like a conspiracy nut, have you not noticed over the years how our rights ARE being slowly eroded...the introduction of electronic banking and credit cards..a LOT easier for the rich and connected to swindle than cash and it also makes it very hard for the working classes to be free with their earnings and to earn a bit for yourself..noticed how some places even refuse cash all together now ?.

the introduction of digital television, the charge-what-they-like TV because eventually you will have NO CHOICE when anolouge is gone because if you do not pay the extortionate amounts they want you to there will be no TV at all !. Rupert fuc***g Murdoch the cancer of information, and the spreader of tyrany through media

The billions swindled by white collar people every year that goes un-punished or with very little punishment, when the blue collar guy rips-off a couple of bills to feed his family because the powers have taken everything he has he goes down big time !.
